

Applied production analysis

A dual approach

<i>List of figures</i>	<i>page x</i>
<i>Preface</i>	xiii
<i>Notation</i>	xvi
Introduction	1
1 The production function	6
1.1 The production function defined	7
1.2 Properties of the production function	8
1.3 Single-input variation	18
1.4 Law of variable proportions	20
1.5 Measure of simultaneous input variation: elasticity of scale	21
1.6 Elasticity of scale and law of variable proportions	25
1.7 Measures of input substitutability	27
1.8 Structure of production functions	36
1.8a Transforms of production functions	36
1.8b Homothetic production functions	37
1.8c Separability	41
2 Cost functions	49
2.1 The cost function defined	50
2.2 Properties of cost functions	51
2.3 Comparative statics from the cost function	63
2.3a Comparative statics of input price changes	63
2.3b Comparative statics and changes in output	68
2.3c Average cost, marginal cost, and cost flexibility	77
2.4 Duality between cost and production functions	82
2.4a Duality and the input requirement set	82
2.4b More geometry of duality	88
3 Structure of cost functions and short-run cost functions	93
3.1 Measuring elasticities of substitution with cost function	93
3.2 Short- and long-run costs	100
3.3 Structure of cost functions	109

3.3a	Separability of cost function	110
3.3b	Equivalence of separable production and costs	115
3.3c	Using separability	117
3.4	Concluding remarks	119
4	The profit function	120
4.1	Introduction	120
4.2	Definition of the profit function	121
4.3	Comparative statics and the profit function	130
4.4	Duality and the profit function	137
4.5	Short- versus long-run profits	145
4.6	Structure of the profit function	149
4.6a	Homotheticity	149
4.6b	Separability of the profit function	152
5	Flexible forms and aggregation	158
5.1	Flexible functional forms defined	160
5.2	Approximation properties of flexible forms	168
5.3	Flexible forms for profit and cost functions	170
5.4	Limitations of flexible functional forms	173
5.5	Using flexible functional forms	179
5.6	Aggregation over firms	182
5.7	Linear aggregation of output	183
5.8	Nonlinear aggregation of output	190
5.9	Some general aggregation results	192
6	Technical change and its measurement	203
6.1	Production function and technical change	205
6.2	Measurement of technical change from indirect objective functions	213
6.2a	Technical change and the cost function	213
6.2b	Technical change and the profit function	224
6.3	Divisia indexes and rate of technical change	230
6.4	Rate of technical change and total factor productivity	235
6.5	Discrete measures of technical change	239
6.6	Measuring relative efficiency	246
6.7	Technical change indexes without constant returns to scale	247
6.8	Summary	248
7	Multiooutput technologies	250
7.1	The primal technology	251
7.2	Multiooutput technologies and indirect objective functions	261

Contents	ix
7.2a Multioutput cost function	261
7.2b Revenue function	262
7.2c Multioutput profit function	268
7.2d Restricted profit function	277
7.3 Duality and multioutput technologies	281
7.4 Structure of multioutput technology	284
7.4a Restrictions on T	285
7.4b Indirect objective functions and structural restrictions	290
