1 ON-DEMAND IRRIGATION SYSTEMS AND DATA NECESSARY FOR THEIR DESIGN	1
Main criteria to design a distribution irrigation system	2
Layout of the paper	6
2 NETWORK LAYOUT	9
Structure and layout of pressure distribution networks	9
Design of an on-demand irrigation network	9
Layout of hydrants	9
Layout of branching networks	9
Optimization of the layout of branching networks	10
Methodology	10
Applicability of the layout optimization methods	13
3 COMPUTATION OF FLOWS FOR ON-DEMAND IRRIGATION SYSTEMS	15
One Flow Regime Models (OFRM)	16
Statistical models: the Clément models	16
The first Clément model	16
The second Clément model	32
Several Flow Regimes Model (SFR Model)	39
Model for generating random discharges	39
4 PIPE-SIZE CALCULATION	43
Optimization of pipe diameters with OFRM	43
Review on optimization procedures	43
Labye's Iterative Discontinuous Method (LIDM) for OFR	45
Optimization of pipe diameters with SFRM	54
Labye's Iterative Discontinuous Method extended for SFR (ELIDM)	55
Applicability	58
The influence of the pumping station on the pipe size computation	58
The use of COPAM for pipe size computation	59
Sensitivity analysis of the ELIDM	63
5 ANALYSIS OF PERFORMANCE	67
Analysis of pressurized irrigation systems operating on-demand	67
Introduction	67
Indexed characteristic curves	67
Models for the analysis at the hydrant level	79
Reliability indicator	92

6 MANAGEMENT ISSUES	97
Some general conditions for a satisfactory operation of on-demand systems	97
Suitable size of family holdings	97
Medium to high levels of irrigation and farm management knowledge	97
Volumetric pricing	98
Correct estimation of the design parameters	98
Reduced energy costs	98
Qualified staff for the operation and maintenance of the system	99
The on-demand operation during scarcity periods	99
Volumetric water charges	101
Water meters	102
Types of volumetric charges	102
Recovery of investments through the volumetric charge	103
The operation, maintenance and administration costs	103
The maintenance of the pumping stations and related devices	104
Flow and pressure meters:	104
Pumps:	104
Compressors:	105
Switchboards:	105
Ancillary works:	105
The maintenance of the irrigation network	105
Towards the use of trickle irrigation at the farm level in on-demand irrigation systems	105
New trends and technologies of delivery equipment	106
 BIBLIOGRAPHY	 109
 ANNEX 1 VALIDATION OF THE 1ST CLÉMENT MODEL	 115
 ANNEX 2 PIPE MATERIALS AND DESIGN CONSIDERATIONS	 125
 ANNEX 3 EXAMPLE OF INPUT AND OUTPUT FILES	 131
