PREFACE	ix
+ Chapter 1/DEFINITIONS AND INTRODUCTION TO THE SUBJECT	1
1-1 Files	2
1-2 Computations on a Database	5
1-3 A Hierarchical View of Data	8
1-4 Current Practice	12
1-5 Descriptions	15
1-6 Binding	17
1-7 Classification of Operating Systems	19
1-8 Applications	22
1-9 Review	23
+ Chapter 2/HARDWARE AND ITS PARAMETERS	27
2-1 Basic Hardware Choices	29
2-2 Hardware Parameters	37
2-3 Blocks and Buffers	50
2-4 Storage Architecture	61
Chapter 3/BASIC FILE-SYSTEM ORGANIZATION	69
3-0 Introduction	69
3-1 The Pile	75

3-2 The Sequential File	82
3-3 The Indexed-Sequential File	91
3-4 The Indexed File	109
3-5 The Direct File	120
3-6 The Multiring File	138
X Chapter 4/HYBRID FILE ORGANIZATIONS	159
4-0 Introduction	159
4-1 Simple Files	162
4-2 Multilevel Index Structures	170
4-3 An Implementation of an Indexed-Sequential File	182
4-4 Tree-Structured Files	193
4-5 Hierarchically Structured Data	200
4-6 Methods Based on Direct Access	213
4-7 Options of the Complex Ring Organization	223
4-8 Files Using Virtual Storage	230
4-9 Phantom Files	233
Chapter 5/OVERALL FILE-SYSTEM EVALUATION	240
5-1 The Estimation of System Usage	242
5-2 Analysis of System Benefits	245
5-3 Database Storage Requirements	252
5-4 The Utilization of a File System	255
5-5 Cost-Benefit Comparison	269
Chapter 6/TECHNIQUES	277
6-1 Statistical Techniques	278
6-2 Simulation	297
6-3 Queuing	300
6-4 Operations Research in Database Design	310
6-5 Storage Allocation	321
Chapter 7/DATABASE STRUCTURE	329
7-0 Structure Definition	330
7-1 Data Models	332
7-2 Semantics of Relations	337
7-3 Operations on Data Models	352
7-4 Sequences	359
7-5 The Design of a Database Model	361
Chapter 8/SCHEMAS	368
8-1 Defining the Elements for a Database	369
8-2 The Schema and Its Use	376
8-3 Defining the Structure of a Database	382
8-4 Manipulation of the Schema	390

8-5 Subschemas	396
8-6 Structure, Schema, and Usage	399
Chapter 9/DATABASE IMPLEMENTATION	405
9-1 Elements of Database Implementation	407
9-2 Calculus on Relations	412
9-3 Relational Algebra	420
9-4 Hierarchical Databases	425
9-5 Databases with Network Capability	434
9-6 Interlinked Hierarchies	449
Chapter 10/INFORMATION RETRIEVAL	461
10-1 Data Constellations	462
10-2 Categories of Information Retrieval	464
10-3 Query Formulation	470
10-4 Dynamics of Information Retrieval	478
Chapter 11/METHODS TO GAIN RELIABILITY	483
11-1 Reliability	484
11-2 Redundancy	487
11-3 Activity Logging and Backup	494
11-4 A Scenario for Recovery	500
Chapter 12/PROTECTION	507
12-1 Components of the Protection Problem	509
12-2 The Accessor	512
12-3 Types of Data Access	516
12-4 The Objects to be Locked	519
12-5 Scope of Protection	521
12-6 Access-Key Organization	522
12-7 Cryptography	529
12-8 Anonymity and Pollution	537
Chapter 13/INTEGRITY OF DATABASES	542
13-1 Locking	543
13-2 Hibernation and Deadlock	551
13-3 Maintenance of Integrity	560
Chapter 14/CODING	565
14-1 Representation of Knowledge	566
14-2 Machine-Dependent Data Representation	571
14-3 Compression of Data	577

Chapter 15/DATABASE OPERATION AND MANAGEMENT	589
15-1 Development of the Database	590
15-2 Maintenance of a Database	592
15-3 The Database Administrator	596
Appendix A INDEX FOR ALTERNATE TERMINOLOGY	599
Appendix B LIST OF DATABASE SYSTEMS	607
Appendix C MATHEMATICAL SYMBOLS USED	614
SYMBOLS USED IN PERFORMANCE FORMULAS	616
BIBLIOGRAPHY	617
INDEX	646
