

B.R. Nag

Electron Transport in Compound Semiconductors

With 148 Figures

Springer-Verlag Berlin Heidelberg New York 1980

Contents

1. <i>Introduction</i>	1
1.1 Historical Note	1
1.2 Applications	2
1.3 Transport Coefficients of Interest	5
1.4 Scope of the Book	7
2. <i>Crystal Structure</i>	9
2.1 Zinc-Blende Structure	9
2.2 Wurtzite Structure	14
2.3 Rock-Salt Structure	17
2.4 Chalcopyrite Structure	18
3. <i>Energy Band Structure</i>	21
3.1 Electron Wave Vector and Brillouin Zone	21
3.2 Brillouin Zone for the Sphalerite and Rock-Salt Crystal Structure	23
3.3 Brillouin Zone for the Wurtzite Structure	24
3.4 Brillouin Zone for the Chalcopyrite Structure	25
3.5 E- k Diagrams	25
3.5.1 Energy Bands for the Sphalerite Structure	26
3.5.2 Energy Bands for the Wurtzite Structure	30
3.5.3 Energy Bands for the Rock-Salt Structure	32
3.5.4 Band Structure of Mixed Compounds	35
3.6 Conclusion	38
4. <i>Theory of Energy Band Structure</i>	40
4.1 Models of Band Structure	40
4.2 Free-Electron Approximation Model	41
4.3 Tight-Binding Approximation Model	45

4.4 Energy Bands in Semiconductor Superlattices	50
4.5 The $\mathbf{k} \cdot \mathbf{p}$ Perturbation Method for Derivating E- $\mathbf{k}$ Relation	53
4.5.1 Single-Band Perturbation Theory	55
4.5.2 Two-Band Approximation	57
4.5.3 Effect of Spin-Orbit Interaction	61
4.5.4 Nonparabolic Relation for Extrema at Points Other than the Γ Point	63
4.6 External Effects on Energy Bands	64
4.6.1 Effects of Doping	64
4.6.2 Effects of Large Magnetic Fields	69
5. <i>Electron Statistics</i>	74
5.1 Fermi Energy for Parabolic Bands	75
5.2 Fermi Energy for Nonparabolic Bands	78
5.3 Fermi Energy in the Presence of a Quantising Magnetic Field	80
5.3.1 Density of States	80
5.3.2 Fermi Level	84
5.4 Fermi Energy and Impurity Density	88
5.4.1 General Considerations	88
5.4.2 General Formula	89
5.4.3 Discussion of Parabolic Band	90
5.4.4 Effect of Magnetic Field	92
5.5 Conclusions	92
6. <i>Scattering Theory</i>	93
6.1 Collision Processes	94
6.2 Transition Probability	100
6.3 Matrix Elements	102
6.4 Free-Carrier Screening	104
6.5 Overlap Integrals	107
6.6 Scattering Probability $S(\mathbf{k})$	112
6.6.1 $S(\mathbf{k})$ for Ionised Impurity Scattering	113
6.6.2 $S(\mathbf{k})$ for Piezoelectric Scattering	116
6.6.3 $S(\mathbf{k})$ for Deformation-Potential Acoustic Phonon Scattering	117
6.6.4 $S(\mathbf{k})$ for Polar Optic Phonon Scattering	118
6.6.5 $S(\mathbf{k})$ for Intervalley and Nonpolar Optic Phonon Scattering	119

6.7 Scattering Probabilities for Anisotropic Bands	120
6.7.1 Herring-Vogt Transformation	121
6.7.2 Scattering Integrals	122
6.8 $S(\mathbf{k})$ for Neutral Impurity, Alloy, and Crystal-Defect Scattering	124
6.8.1 Neutral-Impurity Scattering	125
6.8.2 Alloy Scattering	126
6.8.3 Defect Scattering	126
6.9 Conclusions	127
 7. <i>The Boltzmann Transport Equation and Its Solution</i>	129
7.1 The Liouville Equation and the Boltzmann Equation	129
7.2 The Boltzmann Transport Equation	131
7.3 The Collision Integral	134
7.4 Linearised Boltzmann Equation	135
7.5 Simplified Form of the Collision Terms	139
7.5.1 Collision Terms for Elastic Scattering	140
7.5.2 Collision Terms for Inelastic Scattering	141
7.6 Solution of the Boltzmann Equation	143
7.6.1 Relaxation-Time Approximation	143
7.6.2 Variational Method	145
7.6.3 Matrix Method	150
7.6.4 Iteration Method	153
7.6.5 Monte Carlo Method	154
7.7 Method of Solution for Anisotropic Coupling Constants and Anisotropic Electron Effective Mass	160
7.7.1 Solution for Elastic Collisions	164
7.7.2 Solution for Randomising Collisions	168
7.7.3 Solution for Nonrandomising Inelastic Collisions	168
7.8 Conclusions	170
 8. <i>Low-Field DC Transport Coefficients</i>	171
8.1 Evaluation of Drift Mobility	172
8.1.1 Formulae for Relaxation-Time Approximation	173
8.1.2 Evaluation by the Variational Method	177
8.1.3 Evaluation by Matrix and Iteration Methods	179
8.1.4 Evaluation by the Monte Carlo Method	179

8.2 Drift Mobility for Anisotropic Bands	180
8.2.1 Ellipsoidal Band	180
8.2.2 Warped Band	183
8.3 Galvanomagnetic Transport Coefficients	183
8.3.1 Formulae for Hall Coefficient, Hall Mobility, and Magnetoresistance	185
8.3.2 Reduced Boltzmann Equation for the Galvanomagnetic Coefficients	186
8.3.3 Solution Using the Relaxation-Time Approximation Method	188
8.3.4 A Simple Formula for the Low-Field Hall Mobility	191
8.3.5 Numerical Methods for the Galvanomagnetic Coefficients for Arbitrary Magnetic Fields	192
8.3.6 Evaluation of the Galvanomagnetic Transport Coefficients for Anisotropic Effective Mass	195
8.4 Transport Coefficients for Nonuniform conditions	209
8.4.1 Diffusion	210
8.4.2 Thermal Transport Coefficients	215
8.4.3 Formula for Thermoelectric Power	218
8.4.4 Electronic Thermal Conductivity	225
8.5 Conclusions	229
9. <i>Low-Field AC Transport Coefficients</i>	230
9.1 Classical Theory of AC Transport Coefficients	231
9.1.1 Solution for the Relaxation-Time Approximation	233
9.1.2 Solution for Polar Optic Phonon and Mixed Scattering	238
9.1.3 Solution for Nonparabolic and Anisotropic Bands	239
9.2 AC Galvanomagnetic Coefficients	242
9.3 Cyclotron Resonance and Faraday Rotation	246
9.3.1 Propagation of Electromagnetic Waves in a Semiconductor in the Presence of a Magnetic Field	246
9.3.2 Cyclotron Resonance Effect	248
9.3.3 Faraday Rotation	256
9.4 Free-Carrier Absorption (FCA)	260
9.4.1 Classical Theory of FCA	261
9.4.2 Quantum-Mechanical Theory of FCA	263
9.5 Concluding Remarks	283

10. <i>Electron Transport in a Strong Magnetic Field</i>	284
10.1 Scattering Probabilities	285
10.2 Mobility in Strong Magnetic Fields	290
10.3 Electron Mobility in the Extreme Quantum Limit (EQL)	295
10.3.1 Electron Mobility for Polar Optic Phonon Scattering in the EQL	297
10.4 Oscillatory Effects in the Magnetoresistance	298
10.4.1 Shubnikov-de Haas Effect	299
10.4.2 Magnetophonon Oscillations	303
10.5 Experimental Results on Magnetophonon Resonance	307
10.6 Conclusions	310
11. <i>Hot-Electron Transport</i>	311
11.1 Phenomenon of Hot Electrons	311
11.2 Experimental Characteristics	314
11.3 Negative Differential Mobility and Electron Transfer Effect	323
11.4 Analytic Theories	327
11.4.1 Differential Equation Method	328
11.4.2 Maxwellian Distribution Function Method	332
11.4.3 Displaced Maxwellian Distribution Function Method ..	334
11.5 Numerical Methods	337
11.5.1 Iteration Method	338
11.5.2 Monte Carlo Method	344
11.6 Hot-Electron AC Conductivity	350
11.6.1 Phenomenological Theory for Single-Valley Materials	351
11.6.2 Phenomenological Theory for Two-Valley Materials ...	355
11.6.3 Large-Signal AC Conductivity	358
11.7 Hot-Electron Diffusion	359
11.7.1 Einstein Relation for Hot-Electron Diffusivity	359
11.7.2 Electron Diffusivity in Gallium Arsenide	363
11.7.3 Monte Carlo Calculation of the Diffusion Constant ..	365
11.8 Conclusion	368
12. <i>Review of Experimental Results</i>	370
12.1 Transport Coefficients of III-V Compounds	373
12.1.1 Indium Antimonide	373
12.1.2 Gallium Arsenide	378

12.1.3 Indium Phosphide	384
12.1.4 Indium Arsenide	386
12.1.5 Indirect-Band-Gap III-V Compounds	387
12.2 II-VI Compounds	388
12.2.1 Cubic Compounds of Zinc and Cadmium	389
12.2.2 Wurtzite Compounds of Zinc and Cadmium	390
12.2.3 Mercury Compounds	391
12.3 IV-VI Compounds	392
12.4 Mixed Compounds	394
12.5 Chalcopyrites	397
12.6 Conclusion	397
13. <i>Conclusions</i>	399
13.1 Problems of Current Interest	401
13.1.1 Heavily Doped Materials	401
13.1.2 Alloy Semiconductors	402
13.1.3 Transport Under Magnetically Quantised Conditions ..	403
13.1.4 Inversion Layers	404
13.1.5 Superlattices and Heterostructures	406
13.2 Scope of Further Studies	407
Appendix A: Table of Fermi Integrals	409
Appendix B: Computer Program for the Evaluation of Transport Coefficients by the Iteration Method	410
Appendix C: Values of a_i and b_i for Gaussian Quadrature Integration.	417
Appendix D: Computer Program for the Monte Carlo Calculation of Hot-Electron Conductivity and Diffusivity	418
List of Symbols	423
<i>References</i>	431
<i>Subject Index</i>	451
