<i>List of Figures</i>	<i>viii</i>
<i>Preface</i>	<i>ix</i>
1. The long-period method	1
1.1. Introduction: On some cracks in the neoclassical edifice	1
1.2. Change in theory without change in method	6
1.3. Capital as a homogeneous factor and its roles	27
1.4. Neo-Walrasian equilibria	33
1.5. Long-period does not mean long-run	35
2. The problematic relationship between neo-Walrasian equilibrium analyses and real economies	39
2.1. The impermanence problem, the substitutability problem, the indefiniteness problem	39
2.2. The importance of persistent tendencies	48
Appendix 2A1. Was Keynes's equilibrium a temporary equilibrium?	54
Appendix 2A2. Franklin Fisher and disequilibrium	67
3. Long-period equilibria	72
3.1. The long-period equilibrium without a rate of interest, in economies with production but without capital	72
3.2. The rate of interest in economies without capital	79
3.3. The introduction of capital goods	82
3.4. The problem with the value measurement of the endowment of capital	94
Appendix 3A. Wicksell and the average period of production	99
4. Must long-period equilibria be stationary? With initial observations on investment	118
4.1. Secular stationariness versus static stationariness	118
4.2. Long-period positions without constant relative prices, and non-stationary long-period equilibria with constant relative prices	123
4.3. Investment and demand for capital	126

5. Walras, the shift to neo-Walrasian equilibria, and some confusions	136
5.1. Introduction	136
5.2. Walras' inconsistency	138
5.3. The shift to very-short-period equilibria: Hayek, Lindahl, Hicks	150
5.4. The co-existence of the two approaches to capital	156
Appendix 5A1. A reinterpretation of the Patinkin or 'Classical Dichotomy' controversy in monetary theory	166
Appendix 5A2. If everybody is a price-taker, who sets prices? On Arrow's conception of equilibrium	187
Appendix 5A3. Why the auctioneer must be a central planner and temporary equilibria may be indeterminate; or, neo-Walrasian difficulties with constant returns to scale	190
Appendix 5A4. Bliss on Solow's one-sector growth model	203
6. Reswitching and reverse capital deepening	206
6.1. The value of capital depends on distribution even when nothing changes physically	206
6.2. The inversion in the movement of relative prices, and reswitching	210
6.3. The relevance of reswitching	221
6.4. Why so many and so persistent misunderstandings?	227
Appendix 6A1. Reswitching and the average period of production	239
Appendix 6A2. Stiglitz on the Cambridge controversies	241
Appendix 6A3. The non-substitution theorem	246
Appendix 6A4. On some attempts to minimize the relevance of reverse capital deepening	252
7. Capital theory and macroeconomics. I: the theory of aggregate investment	256
7.1. Introduction: empirical evidence and theoretical difficulties	256
7.2. The 'array-of-opportunities' approach, and the dependence of yields on the rate of interest	262
7.3. The increasing-risk approach	268
7.4. The speed-of-adjustment problem, and Lerner	270
7.5. Adjustment costs	277
7.6. Tobin's $q$	281
7.7. Investment in general equilibrium neo-Walrasian models and conclusions	284

Appendix 7A1. Jorgenson and Precious	287
Appendix 7A2. The Pigou or real balance effect	291
8. Capital theory and macroeconomics. II: the labour demand curve	295
8.1. The labour demand curve: neo-Walrasian or long-period?	295
8.2. Short-period analyses of Keynesian type	298
8.3. Conclusion	303
9. Summary of the critical argument, and sketch of an alternative approach	305
9.1. Summary of the argument so far	305
9.2. Toward an alternative approach	309
Appendix 9A. What is wrong with using aggregate production functions	324
