Contents

Summary xv

1. The Commodity Purchasing Context 1
1.1 The difficulties in commodity purchasing management 1
1.2 Commodity markets 6
1.3 Hedging and speculation 10
1.4 Informal markets and fuzzy prices 13

2. Commodity Price Movements 16
2.1 Long-term price movements 16
2.2 Cocoa prices 18
2.3 Copper prices 19
2.4 Sugar prices 21
2.5 Short-term price movements 22
2.6 Trends or random walks in commodity prices 30
Appendix. A new model for daily commodity-price movements 35

3. Some Practical Buying Examples 41
3.1 A copper buying situation 41
3.2 A linseed oil buying situation 43
3.3 Maize buying situations 49

4. The Components of the Commodity Purchasing Decision 56
4.1 Introduction 56
4.2 Determining future consumption requirements 60
4.3 Determining purchase orders and delivery schedules 62
4.3.1 Ordering policies in general for purchasing 62
4.3.2 Ordering policies for raw materials 68
4.4 The strategic buying period 71
4.4.1 Forecasting considerations 71
4.4.2 Stock investment and financial considerations 75
4.5 The active buying period 77
4.5.1 The general concept 77
4.5.2 Statistical price forecasting methods 79
4.5.3 Econometric/behavioural price forecasting models 82

4.6 The tactical buying problem 85
4.7 Assessing buyers' performance 91
Appendix — Case study: Adapting the active buying period for cocoa 1969–72 92

5. Measuring Tactical Purchasing Performance 99
5.1 Possible measures for purchasing efficiency 99
5.2 An illustrative example of the purchasing efficiency calculations 103
5.3 The overall average purchasing efficiency 105
5.4 Possible 'mistakes' in calculating efficiency measures 109
5.5 A case study — Purchasing efficiency for maize 1969–74 112
5.6 A target or standard for purchasing performance 121
5.7 Alternative purchasing efficiency measures 124
Appendix. Overall average purchasing efficiency analysis 126

6. Purchasing Partially Substitutable Basic Raw Materials — The Blending Problem 131
6.1 Introduction 131
6.2 The blending problem in theory 132
6.3 The problems at the formulation stage 135
6.4 The difficulties arising from the fluctuating prices of materials 136
6.5 The interaction of the fluctuating prices and the many different final products 139
6.6 The control of purchases problem 143
6.7 The blast furnace burdening problem — Case study 1 144
6.8 Extending the burdening model to cover several different blast furnaces 150
6.9 The animal feed mix problem — Case study 2 152
6.10 The nonferrous metal alloys purchasing problem — Case study 3 160
Appendix. The simplex method for linear programming 168

7. Scheduling the Delivery of Linseed Oil Requirements 172
7.1 Definition of the purchasing problem 172
7.2 Company performance 178
7.3 The formulation of a model to give the delivery order schedule 181
7.4 The model solution — The determination of the delivery schedule 187
7.5 Updating and revising the DP model schedules 190
7.6 Alternative heuristic policies 194
7.7 Safety stocks to cover errors in forecasting future usages 196

8. Medium-term Price Forecasting 199
8.1 Type of model needed 199
8.2 A conceptual model of a commodity market 201
8.3 An hypothesis for price determination in a commodity market 205

8.4 Market expectations 206
8.5 Market expectations and price movements 209
8.6 A market barometer 210

9. A Market Barometer for World Linseed Prices 213
9.1 The linseed market situation 213
9.2 A market barometer for linseed 215
9.3 Linseed, linseed oil and linseed meal price relationships 221
9.4 Effect of the devaluation of the U.S. dollar 223

10. Price Determination and Price Forecasting in the World Maize Market 227
10.1 The maize market world background situation 227
10.2 The U.S. government feedgrain subsidy and support programmes 230
10.3 A market barometer for maize 233
10.4 Market expectations 236
10.5 Price movements 240
10.6 Price determination and price forecasting models 244
10.7 The subsequent model performance 249
10.8 Forecasting prices beyond the end of the crop year 251
10.9 Use of the models for forecasting maize prices for the 1977/78 crop year 253

11. Models for the Tactical Buying Problem 261
11.1 Introduction 261
11.2 Price chart patterns 264
11.3 Moving average and simple probability models 266
11.4 'Dollar averaging' as a purchasing policy 277
11.5 Early dynamic programming models 281
11.6 The dynamic programming model for stochastic prices and known demand 283
11.7 Several price offers during a period 294
11.8 Purchasing a single lot before a given deadline 294
11.9 Interpretation of the price breaks for purchasing a single lot 296
11.10 Price discounts 296
11.11 Extension of the initial model to nonstationary price distributions 297
11.12 Restricted supply or restricted purchase quantity situations 302
11.13 The stochastic demand situation 305
11.14 Taylor's price trend model 307
Appendix. Solution to the initial dynamic programming model 311

12. Practical Implementation of the Decision Price Break Policy. Case Study 1 — Day-to-Day Cereals Buying 317
12.1 The general problem 317
12.2 The cereals buying situation 320
12.3 Initial feasibility study 321
12.4 Main study using chief buyer's forecasts 326
12.5 Analysis of the main study results 334
12.6 Conclusions on the use of the chief buyer's forecasts 339
12.7 Simple exponential smoothing forecasts 342
12.8 Adaptive smoothing forecasting methods 346
12.9 The multilot purchase strategy for cereals 351
Appendix. The decision price break recurrence relations for the chief buyer's forecasts 353

13. Practical Implementation of the Decision Price Break Policy. Case Study 2 — Daily Copper Buying 358
13.1 The purchasing problem 358
13.2 Historical survey of copper marketing and pricing policies 359
13.3 Statistical analysis of past copper prices 360
13.4 Results of the initial studies 362
13.5 Further improvements to the combined price forecasting/purchasing model 364
13.5.1 The maximum allowable daily trend 364
13.5.2 The smoothing parameter, γ, of the adaptive smoothing system 365
13.6 Performance of the modified model — April 1966 to April 1968 367
13.7 Other factors affecting the model 370
13.7.1 Use of the LME afternoon closing prices 370
13.7.2 The distribution of the price forecasting errors 371
13.8 Final form of the purchasing model 372
13.9 Practical implementation 374
13.10 The subsequent performance of the model in practice 376
Appendix. Internal company report on online buying simulation 379

14. Organising a Study of Raw Material Purchasing 382
14.1 Planning a purchase study 382
14.2 Implementation of study results 387
14.3 Econometric and/or time series forecasts 389
14:4 An overview of the book 391
