

MARIO AMENDOLA AND JEAN-LUC GAFFARD

The Innovative Choice

*An Economic Analysis of the
Dynamics of Technology*

Basil Blackwell

Contents

Preface	viii
1 THE PROCESS OF INNOVATION	1
Technology and its changes: the different interpretations	1
<i>The 'traditional' approach: adjustment to a given technology</i>	
<i>The evolutionary approach: innovation as a process</i>	
<i>The development of a technology in a given environment</i>	
<i>The specific and cumulative character of technical change: decreasing returns and the narrowing of the options</i>	
Innovation as creation of technology	9
<i>Generic inputs and specific inputs in the process of production</i>	
<i>Quantitative adjustment and qualitative change</i>	
<i>The changing features of the process of production</i>	
<i>The environment as a source of technology: the role of human resources</i>	
2 CHANGES IN TECHNOLOGY AND ECONOMIC THEORY	17
The analysis of change by means of comparison	17
<i>Intuition and method in classical thought</i>	
<i>The 'shifting curves' models</i>	
<i>The synchronic representation of production in models with a horizontal sectoral structure</i>	
<i>New ideas in an old framework</i>	

The analysis of a process of change	26
<i>The analysis of the 'traverse' Circular relations in production and the problem of 'the time taken to make the machine' The Neo-Austrian approach From the embodiment of the technique to the creation of the technology</i>	
3 THE SEQUENTIAL ANALYTICAL FRAMEWORK	35
Sequence analysis	35
<i>Sequence models The breaking of a sequence The search for flexibility, liquidity and the role of money Flexibility and the nature of the learning process</i>	
The analysis of a qualitative change	43
<i>Stock disequilibrium Carrying the disequilibrium down the sequence in a monetary economy: the financial constraint The sequence 'constraints - decisions - constraints' The learning process and the human resource constraint</i>	
4 THE MODEL	53
The processes: profiles and constraints	53
<i>The features of the model The process of production: (a) routine processes; (b) innovative processes The creation of technology as a learning process The human resource constraint</i>	
The working of the model	64
<i>The economy: (a) productive capacity; (b) macro-economic magnitudes Decision processes: (a) current production and prices; (b) investment; (c) consumption The solution of the model: (a) under the financial constraint; (b) under the human resources constraint</i>	

5 PATTERNS OF EVOLUTION OF THE ECONOMY: ISSUES AND POLICIES	79
Economic policy implications	79
<i>Economic policy as stabilization policy The Keynesian approach The monetarist approach 'Out-of-time' economic policies</i>	
Routine choice versus innovative choice	84
<i>A 'viability' problem The routine choice: (a) stabilizing the economy; (b) getting back to potential growth The innovative choice: (a) the determinants of the learning process; (b) the evolution of the economy on an innovative path An economic policy conducive to change and innovation</i>
