CONTENTS

PREFACE	xv
---------------	----

Chapter 1 - MICROBIAL PRIMARY AND SECONDARY METABOLISM

1.1 Introduction	1
1.2 Definitions	2
1.3 Primary and secondary metabolism	4
1.4 Interconnections between primary and secondary metabolism	5
1.5 Speculations on the function of secondary metabolites	10
1.6 Summary	13
References	14

Chapter 2 - SECONDARY BIOSYNTHETIC PATHWAYS

2.1 Introduction	16
2.2 Secondary metabolites derived from saccharides	19
2.3 Polyketide-derived secondary metabolites	20
2.3.1 The patulin model	22
2.3.2 Aflatoxins and other mycotoxins	23
2.3.3 Tetracyclines and anthracyclines	27
2.3.4 Fungal anthraquinones	28
2.4 The terpenoid route	32
2.5 Macrocyclic lactones	37
2.6 Shikimate pathway metabolites	40
2.7 Metabolites derived from amino acids	40
2.7.1 β -Lactam antibiotics	44
2.7.2 Other non-ribosomally synthesized peptides	45
2.7.3 Ribosomally synthesized antibiotics	46
2.8 Summary	49
References	50

Chapter 3 - SECONDARY METABOLISM IN RELATION TO GROWTH AND DIFFERENTIATION

3.1 Introduction	52
3.2 Biosynthesis of secondary metabolites and growth	52
3.3 Bacterial differentiation and secondary metabolism	54
3.4 Secondary metabolism and differentiation in actinomycetes	56
3.5 Fungal differentiation and secondary metabolism	57

3.6 Summary	63
REFERENCES	64

Chapter 4 - PHYSIOLOGICAL REGULATION OF SECONDARY METABOLISM

4.1 Introduction	66
4.2 Regulation of branching pathways	66
4.3 Regulation by precursors	69
4.4 Regulation by carbon sources	70
4.5 Regulation by nitrogen sources	70
4.6 Regulation by inorganic phosphate	72
4.7 Regulation by trace elements	73
4.8 Induction of secondary metabolic pathways	74
4.9 Induction by autoregulators	76
4.10 Feedback regulation in secondary metabolite biosynthesis	79
4.11 Catabolite regulation	79
4.12 Summary	80
References	80

Chapter 5 - GENETIC REGULATION OF SECONDARY METABOLISM

5.1 Introduction	83
5.2 Mutation and selection of high-producing mutants	84
5.3 Genetic recombination and protoplast fusion	84
5.4 Organization and expression of genes of secondary metabolism	84
5.5 Molecular genetics of polyketides	86
5.6 Genes for the biosynthesis of β -lactam antibiotics	88
5.7 Genetics of non-ribosomally synthesized peptides	89
5.8 Genetics of ribosomally synthesized peptides	92
5.9 Genetics of autoregulatory factors in actinomycetes	93
5.10 Summary	94
References	95

Chapter 6 - ANTIBIOTICS

6.1 Introduction	98
6.2 Sources of antibiotics	100
6.3 Chemical classification of antibiotics	101
6.3.1 Primary classification	101
6.3.2 Secondary classification	101
6.3.3 Methods of classification and code system	102
6.3.4 Carbohydrate antibiotics	102
6.3.5 Macrocyclic lactone (lactam) antibiotics	102
6.3.6 Quinone and similar antibiotics	109
6.3.7 Amino acid, peptide and peptolide antibiotics	110
6.3.8 β -Lactam antibiotics	111

6.3.9 Nitrogen- and oxygen-containing heterocyclic antibiotics	116
6.3.10 Alicyclic antibiotics	116
6.3.11 Aromatic antibiotics	118
6.3.12 Aliphatic antibiotics	118
6.4 Summary	118
References	119

Chapter 7 - ENZYME INHIBITORS

7.1 Introduction	121
7.2 Inhibitors of proteinases	121
7.3 Inhibitors of glycosidases	124
7.4 Inhibitors of other hydrolases	126
7.5 Inhibitors of oxido-reductases	127
7.6 Inhibitors of transferases	128
7.7 Inhibitors of lyases	131
7.8 Therapeutic applications of enzyme inhibitors	132
7.9 Summary	132
References	134

Chapter 8 - ALKALOIDS

8.1 Introduction	136
8.2 Ergot alkaloids	137
8.2.1 Clavines	138
8.2.2 Lysergic acid and its simple derivatives	139
8.2.3 Ergopeptines	141
8.2.4 Biological activities and therapeutic applications of ergot alkaloids	141
8.3 Psilocybin and psilocin	141
8.4 Cyclopiazonic acid and cyclophenin-viridicatin group	142
8.5 Summary	144
References	144

Chapter 9 - BACTERIAL TOXINS AND PHYCOTOXINS

9.1 Introduction	145
9.2 Bacterial exotoxins and endotoxins	145
9.3 Use of bacterial neurotoxins in medicine	147
9.4 Insecticidal toxins of bacteria	147
9.5 Phycotoxins	148
9.6 Summary	151
References	152

Chapter 10 - MYCOTOXINS

10.1 Introduction	153
10.2 Aflatoxins	153

10.2.1 Biological activity	154
10.2.2 Mode of action	155
10.3 Sterigmatocystins and versicolorins	157
10.3.1 Biological activity	157
10.4 Trichothecenes	158
10.4.1 Biological activity	160
10.4.2 Mode of action	162
10.5 Ochratoxins and structurally related mycotoxins	164
10.5.1 Biological activity	164
10.5.2 Mode of action	166
10.6 Citrinin	167
10.6.1 Biological activity	167
10.6.2 Mode of action	168
10.7 Toxic small lactones	169
10.7.1 Biological activity and mode of action	169
10.8 Macrocyclic lactones	171
10.8.1 Zearalenone family	171
10.8.2 Brefeldin group	172
10.8.3 Cytochalasans	174
10.8.3.1 Biological activity and mode of action	175
10.9 Anthraquinones	178
10.9.1 Biological activity and mode of action	179
10.10 Tremorgenic mycotoxins	180
10.11 Fumonisin	180
10.12 Miscellaneous mycotoxins	182
10.12.1 Moniliformin and fusarin C	182
10.12.2 Rubratoxins	184
10.12.3 Sporidesmins and emestrin	185
10.12.4 PR toxin	185
10.12.5 Cyclochlorotine	185
10.12.6 Viridicatuntoxin	186
10.13 Summary	186
References	186

Chapter 11 - MICROBIAL METABOLITES AFFECTING PLANT GROWTH AND METABOLISM

11.1 Introduction	192
11.2 Gibberellins	192
11.3 Phytotoxins	194
11.4 Antibiotics and microbial herbicides	201
11.5 Phytoalexins, plant defence metabolites	206
11.6 Summary	206
References	206

Chapter 12 – ANTIPARASITIC AND GROWTH PROMOTING AGENTS

12.1 Introduction	209
12.2 Microbial insecticides and miticides	209
12.3 Antibiotics against phytopathogenic microorganisms	212
12.4 Antiparasitic and growth promoting agents	213
12.5 Summary	215
References	216

Chapter 13 – PHARMACOLOGICALLY INTERESTING AGENTS

13.1 Introduction	218
13.2 Antitumour and antiviral antibiotics	218
13.3 Immunomodulators	224
13.4 Metabolites with miscellaneous pharmacological effects	228
13.5 Summary	231
References	232

Chapter 14 – STRUCTURE-ACTIVITY RELATIONSHIPS

14.1 Introduction	235
14.2 Structural features of bioactivity	235
14.3 Structure-activity relationships among β -lactam antibiotics	241
14.3.1 Penicillins	242
14.3.2 Cephalosporins	249
14.3.3 Other β -lactams	251
14.4 Aminoglycoside antibiotics	254
14.5 Lincomycins	258
14.6 Macrolide antibiotics	260
14.6.1 Erythromycins	260
14.6.2 Leucomycin and deltamycin analogues	261
14.6.3 Spiramycins and chimeramycins	261
14.7 Ansamycin antibiotics	262
14.8 Tetracyclines	264
14.9 Anthracyclines	265
14.10 Polyene antibiotics	267
14.11 Fungal macrocyclic lactones	268
14.11.1 Brefeldin A	268
14.11.2 Cytochalasins	271
14.11.3 Zearalenone group	273
14.12 Small lactones	274
14.13 Isocoumarin derivatives	276
14.14 Aflatoxins and related compounds	277
14.15 Hydroxyanthraquinone mycotoxins	281
14.16 Trichothecenes	283
14.16.1 Toxicity	284

14.16.2 Inhibition of eukaryotic protein synthesis	287
14.16.3 SAR among 8-oxo-12,13-epoxytrichothecenes	288
14.17 Toxic and side effects of antibiotics	289
14.18 Summary	292
References	292

Chapter 15 - MECHANISMS OF ACTION OF ANTIBIOTICS AND MYCOTOXINS

15.1 Introduction	297
15.2 Biochemical targets for drug action	299
15.2.1 Action at the active centre: Substrate competition	299
15.2.2 Allosteric inhibition and "false feedback" inhibitors	301
15.2.3 Disorganization of the active centre by other interactions	302
15.3 Inhibitors of cell-wall biosynthesis	303
15.3.1 Inhibitors of biosynthesis of bacterial cell-wall polymers	304
15.3.1.1 Peptidoglycan biosynthesis and effects of antibiotics	304
15.3.1.2 Inhibitors of teichoic acid biosynthesis	314
15.3.2 Inhibitors of biosynthesis of fungal cell-wall polymers	316
15.4 Drugs affecting functions of cell membranes	319
15.4.1 Ionophores	320
15.4.2 Polymyxins	325
15.4.3 Polyene antibiotics	325
15.4.4 Other secondary metabolites	327
15.5 Inhibitors of energy metabolism	327
15.6 Inhibitors of nucleic acid synthesis	333
15.6.1 Inhibitors of nucleotide synthesis	333
15.6.2 Agents impairing the template function of DNA	335
15.6.2.1 Cross-linking agents	336
15.6.2.2 Intercalating agents	339
15.6.2.3 Covalent binding and adduct-forming agents	342
15.6.2.4 Degradation of DNA templates	346
15.6.3 DNA replication and its inhibitors	349
15.6.3.1 Inhibitors of DNA replication	351
15.6.4 Inhibitors of RNA synthesis	352
15.7 Protein biosynthesis and its inhibitors	354
15.7.1 Protein biosynthesis	354
15.7.1.1 Inhibitors of aminoacyl-tRNA formation	359
15.7.1.2 Inhibitors of protein chain initiation	359
15.7.1.3 Inhibitors of elongation	361
15.8 Antibiotics in studies of mitochondria, plastids and viruses	364
15.9 Summary	367
References	368

Chapter 16 - MECHANISMS OF RESISTANCE TO ANTIBIOTICS

16.1 Introduction	376
-------------------------	-----

16.2	Biochemical basis of antibiotic resistance	378
16.2.1	Modification of the target	379
16.2.2	Reduction of the physiological importance of the target	386
16.2.3	Duplication of the target	387
16.2.4	Prevention of access to the target	388
16.2.5	Resistance by inactivation	391
16.2.5.1	Inactivation by antibiotic-destroying enzymes	391
16.2.5.2	Inactivation by substitution	397
16.3	Genetic basis of antibiotic resistance	402
16.3.1	Modification of genes	403
16.3.2	Location of resistance genes	406
16.3.3	Speculations about the origin, evolution and dissemination of resistance genes.....	412
16.3.3.1	β -Lactamases	413
16.3.3.2	Chloramphenicol acetyltransferases	414
16.3.3.3	Aminoglycoside-modifying enzymes	415
16.3.3.4	Dissemination of antibiotic-resistance genes	418
16.3.3.5	“Resistance genes are not all bad!”	420
16.3.3.6	Inhibition of resistance and of R-plasmid transfer	421
16.4	Self-protection mechanisms in antibiotic producers.....	422
16.4.1	Modification or replacement of the target	423
16.4.2	Inactivation or sequestration of intracellular antibiotics	425
16.4.3	Utilization of membrane permeability barriers	425
16.5	Summary	427
	References	427

*Chapter 17 - NATURAL OCCURRENCE AND ENVIRONMENTAL ASPECTS
OF ANTIBIOTICS AND MYCOTOXINS*

17.1	Introduction	433
17.2	Ecological roles of antibiotics	433
17.3	Environmental aspects of mycotoxins	436
17.3.1	Mycotoxin formation in the field	437
17.3.2	Mycotoxins in agricultural products	440
17.3.3	Mycotoxin formation during storage	445
17.3.4	Mycotoxins in animal products	447
17.3.5	Mycotoxins in mould-ripened foods	448
17.4	Summary	449
	References	450
	SUBJECT INDEX	454
