**Investigations on possibilities to improve the
antiphytopathogenic potential of soils against
the cyst nematode *Heterodera schachtii* and the
citrus nematode *Tylenchulus semipenetrans***

TABLE OF CONTENTS

Table of contents.....	I
List of abbreviations.....	III
List of tables.....	IV
List of figures.....	VI
1 Introduction.....	1
1.1 Background.....	1
1.2 Objectives.....	5
2 Materials and methods.....	6
2.1 Sampling procedures.....	6
2.2 Biological methods.....	6
2.2.1 Nematode propagation in soil.....	6
2.2.2 Inoculation procedures.....	7
2.2.3 Nematode extraction, counting and identification.....	7
2.3 Vegetative Measurements.....	8
2.4 Nematode control strategies.....	8
2.4.1 Organic and inorganic fertilisers.....	8
2.4.2 Organic and amino acids.....	8
2.4.3 Microbial agents.....	9
2.4.4 Navel orange on resistant rootstocks.....	9
2.4.5 Plant extracts.....	10
2.4.6 Carbofuran.....	12
2.5 Experimental design.....	12
2.5.1 Greenhouse experiment of cyst nematode control strategy - CYNCOSE.....	12
<i>Enhancing the antiphytopathogenic potential of the soil against cyst nematodes</i> ...	12
2.5.2 Greenhouse experiment of the citrus nematode control strategy - CINCOS... 15	15
<i>Enhancing the antiphytopathogenic potential of the soil against citrus nematodes</i> 15	15
2.5.3 Greenhouse experiment of citrus rootstocks susceptibility to the infection	
with citrus nematodes - ROSSUS.....	16
<i>Application of citrus rootstocks as citrus nematode control strategy</i>	16
2.5.4 Field experiment with citrus trees – FECIT.....	17
<i>Timing of application</i>	17
2.6 Statistical analysis.....	18

3 Results	19
3.1 Enhancing the antiphytopathogenic potential of soil against the sugar beet cyst nematode <i>Heterodera schachtii</i>	19
3.1.1 Organic and inorganic fertilisers	19
3.1.2 Microbial agents	24
3.1.3 Plant extracts	28
3.2 Enhancing the antiphytopathogenic potential of soil against the citrus nematode <i>Tylenchulus semipenetrans</i>	38
3.2.1 Organic and inorganic fertilisers	38
3.2.2 Organic and amino acids	42
3.2.3 Microbial agents	45
3.2.4 Plant extracts	50
3.3 Application of different rootstocks as a mean to control citrus nematode.....	58
3.3.1 Relative susceptibility of citrus rootstocks.....	58
3.3.2 Application of Navel orange scions on resistant rootstocks against citrus nematode.....	63
3.4 The suitable application time of nematode control strategies	67
4 Discussion	69
4.1 Evaluation of the approaches used to enhance the antiphytopathogenic potential of soil against the sugar beet cyst nematode <i>Heterodera schachtii</i> and the citrus nematode <i>Tylenchulus semipenetrans</i>	71
4.2 Evaluation of different rootstocks as a mean to control citrus nematodes	83
4.3 Determination of the most suitable application time for nematode control strategies	84
5 Summary/ Zusammenfassung	86
6 References	92
7 Appendix	105
