Series Preface . . . . .	xi
Preface . . . . .	xiii
Acknowledgements . . . . .	xvii
<b>Chapter I THE IMPOUNDED RIVER . . . . .</b>	<b>1</b>
Introduction . . . . .	1
The Spread of Dams . . . . .	3
Investigations on Impounded Rivers . . . . .	7
Problems Arising from River Impoundment . . . . .	11
A Classification of Natural Rivers . . . . .	13
Catchment Ecosystems . . . . .	13
Spatial Variation of World Rivers . . . . .	15
The River Continuum Concept . . . . .	20
Effects of River Impoundment . . . . .	23
<b>Chapter II THE HYDROLOGY OF DAMMED RIVERS . . . . .</b>	<b>26</b>
Reservoir Design and Function . . . . .	27
Flood Regulation . . . . .	32
Reservoir Lag . . . . .	35
Variable Effectiveness of Flood-control . . . . .	36
Hydrological Effects of Small Structures . . . . .	38
Floodwater-retarding Structures . . . . .	39
Water-conservation Structures . . . . .	40
Major Flow-regulation Structures . . . . .	43
Pulse Releases . . . . .	50
Reservoir Life-expectancy . . . . .	53
<b>Chapter III THE QUALITY OF RESERVOIR RELEASES . . . . .</b>	<b>54</b>
Thermal Stratification . . . . .	55
Latitudinal Variations . . . . .	58

Morphometric Variations . . . . .	61
Chemical Stratification . . . . .	62
Dissolved Gases . . . . .	64
Biogeochemistry . . . . .	65
Temporal Patterns . . . . .	67
Density Currents . . . . .	68
Water-quality Stabilization . . . . .	71
Epilimnial and Hypolimnial Releases . . . . .	75
Low-quality Pulses . . . . .	78
Dilution Problems . . . . .	80
Quality Control . . . . .	83
 Chapter IV   SESTON TRANSPORT . . . . .	 88
The Mineral Component . . . . .	91
Reservoir Sedimentation . . . . .	91
Inorganic Suspended Loads below Dams . . . . .	97
The Plankton Component . . . . .	101
The Lake Plankton Contribution . . . . .	103
Retention-times for plankton development . . . . .	103
Seasonal pattern of lentic plankton development . . . . .	106
Epilimnial and hypolimnial releases . . . . .	108
Plankton within Impounded Rivers . . . . .	111
Downstream persistence of lentic plankton . . . . .	112
Enhancement of downstream phytoplankton production . . . . .	114
 Chapter V   CHANNEL MORPHOLOGY . . . . .	 117
Accelerated Erosion . . . . .	119
Limitations to Channel Degradation . . . . .	123
Bank Erosion and Floodplain Processes . . . . .	126
Bed-material Composition . . . . .	128
Sedimentation . . . . .	129
Sedimentation at Tributary Confluences . . . . .	133
The Role of Vegetation in Channel Change . . . . .	137
Channel Form . . . . .	139
Local and Short-term Variations of Channel Change . . . . .	142
Long-term Variations of Channel Response . . . . .	143
Channel Form and Discharge Relationships . . . . .	148
 Chapter VI   VEGETATION REACTION AND STRUCTURE . . . . .	 150
Autochthonous Primary Production . . . . .	150
Attached Algae . . . . .	151
Higher Plants . . . . .	159
Riparian Communities . . . . .	164
Confined Rivers . . . . .	166
Floodplain Rivers . . . . .	168

The Floodplain Fauna . . . . .	171
Vegetational Response to River Impoundment . . . . .	173
<b>Chapter VII. MACROINVERTEBRATE RESPONSE TO     UPSTREAM IMPOUNDMENT . . . . .</b>	<b>175</b>
Effects of Flow-regulation . . . . .	180
Flow Manipulation . . . . .	183
Reduced Flows . . . . .	186
Artificial Flow-fluctuations and Invertebrate Drift . . . . .	187
Epilimnial and Hypolimnial Releases . . . . .	191
Water Quality . . . . .	195
Thermal Regime . . . . .	196
Downstream Variations of Benthos . . . . .	199
Pool-riffle Variations . . . . .	202
Time-scale for Invertebrate Response . . . . .	204
Channel Change and Invertebrate Communities . . . . .	206
 <b>Chapter VIII. FISH AND FISHERIES . . . . .</b>	 <b>209</b>
Effects of Physio-chemical Changes . . . . .	213
Discharge Modifications . . . . .	213
Short-term flow-fluctuations . . . . .	213
Floodplain inundation control . . . . .	214
Discharge as a stimulus to migration . . . . .	216
Water Quality . . . . .	217
Indirect Consequences . . . . .	220
Food Supply Alteration . . . . .	220
Morphological Changes . . . . .	220
Riparian and Aquatic Vegetation . . . . .	223
Introduction of Exotics . . . . .	223
Interrupted Fish Migrations . . . . .	225
Gas Supersaturation . . . . .	227
Downstream Migrations . . . . .	228
Maintenance of Anadromous Fisheries . . . . .	231
Fishways . . . . .	231
Collection and transportation facilities . . . . .	233
Artificial spawning-grounds . . . . .	234
Fisheries of Impounded Rivers . . . . .	235
 <b>Chapter IX. MANAGEMENT PROBLEMS AND PROSPECTS . . . . .</b>	 <b>238</b>
Problems . . . . .	239
System Stability and Resilience . . . . .	242
Complex Response . . . . .	245
Prospects . . . . .	251
Determination of In-stream Flow Needs . . . . .	253
Trinity River Resurrected? . . . . .	256

<b>The Trinity River Basin</b> . . . . .	<b>256</b>
<b>The Trinity River Project</b> . . . . .	<b>257</b>
<b>Impacts</b> . . . . .	<b>258</b>
<b>Management Programme</b> . . . . .	<b>260</b>
<b>Conservation or Bust?</b> . . . . .	<b>262</b>
<b>References</b> . . . . .	<b>267</b>
<b>Author Index</b> . . . . .	<b>303</b>
<b>Geographical Index</b> . . . . .	<b>313</b>
<b>Subject Index</b> . . . . .	<b>319</b>
