TABLE OF CONTENTS

Chapter One Introduction

1	Organization of the Book	1
1.1	History	1
1.2	Nomenclature, classification of reaction types and survey of conjugate acceptors	2
1.2.1	Nomenclature of reaction types	2
1.2.2	1,2 vs 1,(2n+2) addition (n = 1,2 etc)	3
1.2.3	Survey of conjugate acceptors	4
1.3	Mechanism of conjugate additions	5
1.3.1	Frontier molecular orbitals and conjugate additions	5
1.3.2	Thermodynamics and kinetics	7
1.3.3	Conjugate addition of organocopper reagents	10
	Ab initio calculations	13
1.3.4	Addition/elimination	13
1.3.5	Regioselection of additions	14
1.3.6	Stereoselection at the nucleophile	17
1.3.6.1	Chiral cyclic enolates	17
1.3.6.2	Chiral acyclic enolates	18
1.3.7	Stereoselection at the conjugate acceptor	19
1.3.7.1	Acyclic systems	19
	Chiral auxiliaries	20
	γ -Substituted alkenoyl compounds	20
	Alkenylsulfoxides	23
1.3.7.2	Monocyclic systems	25
	5-Membered rings	25
	6-Membered rings	25
1.3.7.3	Bicyclic systems	27
1.3.8	Chiral catalysis	27
1.4	The nucleophiles	29
1.4.1	Stabilized carbanions	29
1.4.1.1	Carbanions stabilized by π -conjugation with one heteroatom	29
	(a) Ketone enolates	30
	(b) Ester enolates	31
	(c) Amide enolates	32
	(d) Hydrazones and imines	33
	(e) Nitro-stabilized carbanions	33
	(f) Nitrile-stabilized carbanions	34
1.4.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	34
1.4.1.3	Carbanions stabilized by one or more α -heteroatoms	35
1.4.2	Carbanions without heteroatom stabilization	35
1.4.2.1	Copper-based reagents	35
	(a) Mono-organocoppers (RCu) and heterocuprates	36
	(b) Lower order organocuprates (LO cuprates) including copper-catalyzed reactions	39

	Aggregation	40
	Lewis acids	41
	Trialkylhalosilanes with or without polar additives	41
	Metal salts	43
	(c) Higher order organocuprates (HO cuprates)	43
	(d) Structure	44
1.4.2.2	Other organometallic reagents	45
1.4.3	Free radicals	46
1.4.4	Enamines, enol ethers and silyl ketene acetals	46
1.4.4.1	Enamines	46
1.4.4.2	Enol ethers and silyl ketene acetals	47
1.4.5	Cyanide	47
1.4.6	Heteronucleophiles	48
1.4.6.1	Nitrogen and phosphorus	48
1.4.6.2	Oxygen, sulfur and selenium	48
1.4.6.3	Silicon and tin	49
1.4.6.4	Iodine	49
1.5	<i>Intramolecular reactions</i>	49
1.5.1	Baldwin's rules for ring closure	49
1.5.2	Stereoselective ring closures	51
1.6	<i>Tandem reactions</i>	52
	References	53
Chapter Two	Alkenals and acyclic alkenones	63
2	Introduction	63
2.1	<i>Intermolecular reactions</i>	63
2.1.1	Stabilized carbanions	63
2.1.1.1	Carbanions stabilized by π -conjugation with one heteroatom	63
	(a) Addition of achiral carbanions to achiral alkenones	63
	(i) Ketone enolates	63
	The Robinson annulation	65
	Enolate formation	66
	Temporary α -blocking groups	68
	Michael Reaction	71
	(ii) Ester enolates	73
	(iii) Nitro-stabilized carbanions	77
	(iv) Sulfonyl-stabilized carbanions	80
	(b) Addition of achiral carbanions to chiral alkenones	80
	(c) Addition of chiral carbanions to achiral alkenones	81

2.1.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	83
	(a) Addition of achiral carbanions to achiral alkenones	83
	(i) 1,3-Dicarbonyl compounds	83
	(ii) α -Nitroketones	87
	Chiral catalysis	87
	Chiral enolates	89
	(b) Addition of achiral carbanions to chiral alkenones	87
	(c) Addition of chiral carbanions to achiral alkenones	87
2.1.1.3	Carbanions stabilized by one or more α -heteroatoms	91
2.1.2	Organocopper reagents	93
2.1.2.1	Addition of achiral organocopper reagents to achiral alkenals and alkenones	93
	Alkenyl cuprates	97
2.1.2.2	Addition of achiral organocopper reagents to chiral alkenals and alkenones	98
2.1.2.3	Addition of chiral organocopper reagents to achiral alkenals and alkenones	99
	Chiral Transfer ligands	99
	Chiral Residual ligands	100
2.1.3	Other organometallic reagents	100
2.1.4	Free radicals	105
2.1.5	Enamines and enol ethers	107
2.1.5.1	Enamines	107
2.1.5.2	Enol ethers and ketene acetals	109
	(a) Addition of achiral enol ethers to achiral alkenones	109
	(b) Addition of achiral enol ethers to chiral alkenones	113
	(c) Addition of chiral enol ethers to achiral alkenones	114
2.1.6	Conjugate hydrocyanation	114
2.1.7	Heteronucleophiles	114
2.1.7.1	Nitrogen and phosphorus	114
	(a) Nitrogen	114
	(b) Phosphorus	116
2.1.7.2	Oxygen, sulfur and selenium	118
2.1.7.3	Silicon and tin	119
2.1.7.4	Iodine	120
2.1.7.5	Conjugate reduction	121
2.2	<i>Intramolecular reactions</i>	122
2.2.1	Stabilized carbanions	122
2.2.1.1	Carbanions stabilized by π -conjugation with one heteroatom	122
2.2.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	124
2.2.2	Other organometallic reagents	124
2.2.3	Free radicals	125
2.2.4	Heteronucleophiles	126
	References	127

Chapter Three Cycloalkenones	137
3 Introduction	137
3.1 Intermolecular reactions	137
3.1.1 Stabilized carbanions	137
3.1.1.1 Carbanions stabilized by π -conjugation with one heteroatom	137
(a) Ketone enolates	137
(b) Ester (and related) enolates	138
(c) Nitro-stabilized carbanions	140
(d) Sulfonyl-stabilized carbanions	141
(e) Other stabilized carbanions	143
3.1.1.2 Carbanions stabilized by π -conjugation with more than one heteroatom	144
(a) Addition of achiral carbanions to achiral cycloalkenones	144
(b) Addition of achiral carbanions to chiral cycloalkenones	147
(c) Addition of chiral carbanions to achiral cycloalkenones	147
(d) Addition of chiral carbanions to chiral cycloalkenones	148
3.1.1.3 Carbanions stabilized by one or more α -heteroatoms	148
3.1.2 Organocopper reagents	150
3.1.2.1 Addition of achiral organocopper reagents to achiral conjugate acceptors	150
3.1.2.2 Addition of achiral organocopper reagents to chiral cycloalkenones	155
Alkenylcopper reagents	155
Prostaglandin synthesis	157
Polycyclic systems	162
3.1.2.3 Addition of chiral organocopper reagents to achiral conjugate acceptors	163
Chiral Transfer ligands	165
3.1.3 Other organometallic reagents	166
3.1.3.1 Addition of achiral organometallic reagents to achiral cycloalkenones	166
3.1.3.2 Addition of achiral organometallic reagents to chiral cycloalkenones	169
3.1.4 Free radicals	172
3.1.5 Enol ethers	173
3.1.5.1 Addition of achiral enol ethers to achiral cycloalkenones	173
3.1.5.2 Addition of achiral enol ethers to chiral cycloalkenones	176
3.1.6 Conjugate hydrocyanation	176
3.1.6.1 Conjugate hydrocyanation of achiral cycloalkenones	176
3.1.6.2 Conjugate hydrocyanation of chiral cycloalkenones	177
3.1.7 Heteronucleophiles	178
3.1.7.1 Nitrogen	178
3.1.7.2 Sulfur	179
3.1.7.3 Silicon and tin	179

3.1.7.4	Iodine	181
3.1.7.5	Conjugate reduction	181
3.2	<i>Intramolecular reactions</i>	182
3.2.1	Stabilized carbanions	182
3.2.1.1	Carbanions stabilized by π -conjugation with one heteroatom	182
3.2.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	185
3.2.2	Other organometallic reagents	185
3.2.3	Free radicals	186
3.2.4	Heteronucleophiles	188
3.2.4.1	Nitrogen	188
3.2.4.2	Oxygen and sulfur	189
	References	190
Chapter Four	Alkenoic acids and their derivatives	199
4	Introduction	199
4.1	<i>Intermolecular reactions</i>	199
4.1.1	Stabilized carbanions	199
4.1.1.1	Carbanions stabilized by π -conjugation with one heteroatom	199
	(a) Addition of achiral carbanions to chiral alkenoate derivatives	199
	Ketone enolates	199
	Ester-derived enolates	202
	Nitro-stabilized carbanions	205
	Sulfonyl-stabilized carbanions	206
	(b) Addition of achiral carbanions to chiral alkenoate derivatives	206
	(c) Addition of chiral carbanions to achiral alkenoate derivatives	209
	Ketone and aldehyde derived enolates	209
	Ester-derived enolates	210
	Sulfoxide-stabilized carbanions	213
4.1.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	213
	(a) Addition of achiral carbanions to achiral alkenoate derivatives	213
	(b) Addition of achiral carbanions to chiral alkenoate derivatives	215
	(c) Addition of chiral carbanions to achiral alkenoate derivatives	215
4.1.1.3	Carbanions stabilized by one or more α -heteroatoms	216
4.1.2	Organocopper reagents	218
4.1.2.1	Addition of achiral organocopper reagents to achiral alkenoate derivatives	218
4.1.2.2	Addition of achiral organocopper reagents to chiral alkenoate derivatives	220

4.1.3	Other organometallic reagents	225
4.1.3.1	Addition of achiral organometallic reagents to achiral alkenoate derivatives	225
4.1.3.2	Addition of achiral organometallic reagents to chiral alkenoate derivatives	228
	Iron acyls	232
4.1.3.3	Addition of chiral organometallic reagents to achiral alkenoate derivatives	234
4.1.4	Free radicals	235
4.1.5	Enamines and enol ethers	237
4.1.5.1	Enamines	237
	(a) Addition of achiral enamines to achiral alkenoate derivatives	237
	(b) Addition of chiral enamines to achiral alkenoate derivatives	239
4.1.5.2	Enol ethers	241
4.1.6	Conjugate hydrocyanation	241
4.1.7	Heteronucleophiles	243
4.1.7.1	Nitrogen and phosphorus	243
	(a) Nitrogen	243
	(i) Addition of achiral amines to achiral alkenoates and their derivatives	243
	(ii) Addition of chiral amines to achiral alkenoates	248
	(iii) Addition of achiral amines to chiral alkenoates	249
	(b) Phosphorus	251
4.1.7.2	Oxygen and sulfur	253
4.1.7.3	Silicon and tin	255
4.1.7.4	Conjugate reduction	258
4.2	<i>Intramolecular reactions</i>	260
4.2.1	Stabilized carbanions	260
4.2.1.1	Carbanions stabilized by π -conjugation with one heteroatom	260
4.2.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	261
4.2.2	Free radicals	263
4.2.3	Enamines	268
4.2.4	Heteronucleophiles	269
4.2.4.1	Nitrogen	269
4.2.4.2	Oxygen and sulfur	271
	References	273
Chapter Five	α,β-Unsaturated lactones and lactams	283
5	Introduction	283
5.1	<i>Stabilized carbanions</i>	283
5.1.1	Carbanions stabilized by π -conjugation with one heteroatom	283
5.1.2	Carbanions stabilized by one or more α -heteroatoms	285

5.2	<i>Organocopper reagents</i>	287
5.3	<i>Other organometallic reagents</i>	290
5.4	<i>Free radicals</i>	291
5.5	<i>Heteronucleophiles</i>	292
5.5.1	Nitrogen	292
5.5.2	Oxygen and sulfur	293
5.5.3	Silicon and tin	294
5.5.4	Conjugate reduction	295
	References	296
Chapter Six	Other Systems	299
6	<i>Introduction</i>	299
6.1	<i>Nitroalkenes</i>	299
6.1.1	Stabilized carbanions	299
6.1.2	Organocopper reagents	303
6.1.3	Other organometallic reagents	303
6.1.4	Free radicals	304
6.1.5	Enamines and enol ethers	304
6.1.5.1	Enamines	304
6.1.5.2	Enol ethers	307
6.1.6	Heteronucleophiles	307
6.2	<i>Alkenylsulfoxides, phosphonates and related compounds</i>	310
6.2.1	Stabilized carbanions	310
6.2.2	Organocopper reagents	313
6.2.3	Other organometallic reagents	315
6.2.4	Heteronucleophiles	319
6.2.4.1	Nitrogen	319
6.2.4.2	Oxygen and sulfur	321
6.2.5.3	Silicon	322
6.3	<i>Quinones</i>	322
	Regiochemistry of additions	324
	2-Acyl-1,4-quinones	325
	Alkoxy, alkylthio or amino-1,4-quinones	326
	Alkyl-1,4-quinones	328
	2-Halobenzo-1,4-quinones	330
6.4	<i>Alkenylsilanes, sulfides and selenides</i>	330
6.5	<i>Ketene acetals</i>	332
6.6	<i>Alkenylphosphonium salts</i>	333
	References	333

Chapter Seven	Activated alkynes	339
7.1	<i>Alkynones</i>	339
7.1.1	Stabilized carbanions	339
7.1.1.1	Carbanions stabilized by π -conjugation with one heteroatom	339
7.1.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	341
7.1.2	Organocopper reagents	342
7.1.3	Heteronucleophiles	344
7.2	<i>Alkynoic acid derivatives</i>	345
7.2.1	Stabilized carbanions	345
7.2.1.1	Carbanions stabilized by π -conjugation with one heteroatom	345
7.2.1.2	Carbanions stabilized by π -conjugation with more than one heteroatom	346
7.2.2	Organocopper reagents	347
7.2.3	Enamines and enol ethers	350
7.2.3.1	Enamines	350
7.2.3.2	Enol ethers and ketene acetals	351
7.2.4	Heteronucleophiles	352
7.2.4.1	Nitrogen	352
7.2.4.2	Sulfur and selenium	353
7.2.4.3	Tin	354
7.2.4.4	Conjugate reduction	355
7.3	<i>Alkynyl sulfoxides and related systems</i>	355
	References	356
	Index	359
