

Michel Talagrand

# Mean Field Models for Spin Glasses

Volume I: Basic Examples

 Springer

# Contents

<b>Introduction</b> .....	<b>XI</b>
<b>1. The Sherrington-Kirkpatrick Model</b> .....	<b>1</b>
1.1 Introduction .....	1
1.2 Notations and Simple Facts .....	5
1.3 Gaussian Interpolation and the Smart Path Method .....	12
1.4 Latala's Argument .....	29
1.5 A Kind of Central Limit Theorem .....	51
1.6 The Cavity Method .....	53
1.7 Gibbs' Measure; the TAP Equations .....	67
1.8 Second Moment Computations and the Almeida-Thouless Line .....	80
1.9 Beyond the AT Line .....	93
1.10 Central Limit Theorem for the Overlaps .....	98
1.11 Non Gaussian Behavior: Hanen's Theorem .....	113
1.12 The SK Model with $d$ -component Spins .....	125
1.13 The Physicist's Replica Method .....	140
1.14 Notes and Comments .....	146
<b>2. The Perceptron Model</b> .....	<b>151</b>
2.1 Introduction .....	151
2.2 The Smart Path .....	154
2.3 Cavity in $M$ .....	160
2.4 The Replica Symmetric Solution .....	173
2.5 Exponential Inequalities .....	182
2.6 Notes and Comments .....	190
<b>3. The Shcherbina and Tirozzi Model</b> .....	<b>191</b>
3.1 The Power of Convexity .....	191
3.2 The Replica-Symmetric Equations .....	207
3.3 Controlling the Solutions of the RS Equations .....	224
3.4 Notes and Comments .....	235

<b>4. The Hopfield Model</b>	237
4.1 Introduction: The Curie-Weiss Model	237
4.2 Local Convexity and the Hubbard-Stratonovitch Transform	244
4.3 The Bovier-Gaynard Localization Theorem	254
4.4 Selecting a State with an External Field	272
4.5 Controlling the Overlaps	274
4.6 Approximate Integration by Parts and the Replica-Symmetric Equations	284
4.7 Notes and Comments	295
<b>5. The V-statistics Model</b>	297
5.1 Introduction	297
5.2 The Smart Path	299
5.3 Cavity in $M$	302
5.4 The New Equation	306
5.5 The Replica-Symmetric Solution	312
<b>6. The Diluted SK Model and the K-Sat Problem</b>	325
6.1 Introduction	325
6.2 Pure State	328
6.3 The Functional Order Parameter	340
6.4 The Replica-Symmetric Solution	345
6.5 The Franz-Leone Bound	359
6.6 Continuous Spins	364
6.7 The Power of Convexity	376
6.8 Notes and Comments	395
<b>7. An Assignment Problem</b>	397
7.1 Introduction	397
7.2 Overview of the Proof	401
7.3 The Cavity Method	402
7.4 Decoupling	405
7.5 Empirical Measures	413
7.6 Operators	422
7.7 Notes and Comments	433
<b>A. Appendix: Elements of Probability Theory</b>	435
A.1 How to Use this Appendix	435
A.2 Differentiation Inside an Expectation	435
A.3 Gaussian Random Variables	437
A.4 Gaussian Integration by Parts	440
A.5 Tail Estimates	441
A.6 How to Use Tail Estimates	444
A.7 Bernstein's Inequality	446
A.8 $\varepsilon$ -Nets	448

A.9 Random Matrices .....	449
A.10 Poisson Random Variables and Point Processes .....	454
A.11 Distances Between Probability Measures .....	456
A.12 The Paley-Zygmund Inequality .....	460
A.13 Differential Inequalities .....	460
A.14 The Latala-Guerra Lemma .....	461
A.15 Proof of Theorem 3.1.4 .....	462
<b>References</b> .....	465
<b>Index</b> .....	475
<b>Glossary</b> .....	479
