Preface xxvii

PART I ENGINE CYCLE DESIGN 1

1. The Design Process 3

1.1 Introduction 3
1.2 Designing is Different 3
1.3 The Need 4
1.4 Our Approach 5
1.5 The Wheel Exists 6
1.6 Charting the Course 6
1.7 Units 8
1.8 Standard Atmosphere 9
1.9 Compressible Flow Functions 9
1.10 Looking Ahead 9
1.11 Example Request for Proposal 10
1.12 Mission Terminology 16

2. Aircraft/Engine System Constraint Analysis 17

2.1 Concept 17
2.2 Design Tools 20
2.2.1 Case 1: Constant Altitude/Speed Cruise 23
2.2.2 Case 2: Constant Speed Climb 24
2.2.3 Case 3: Constant Altitude/Speed Turn 25
2.2.4 Case 4: Horizontal Acceleration 26
2.2.5 Case 5: Takeoff Ground Roll, $T_{SL} >> (D + R)$ 26
2.2.6 Case 6: Takeoff Ground Roll 27
2.2.7 Case 7: Braking Roll 30
2.2.8 Case 8: Service Ceiling 32
2.3 Preliminary Estimates for Constraint Analysis 33
2.3.1 Aerodynamics 33
2.3.2 Propulsion 35
2.3.3 Weight Fraction 36
2.4 Example Constraint Analysis 38
2.4.1 Constraint Boundary Analysis 39
2.4.2 Selection of the Air-to-Air Fighter Design Point 44
2.4.3 Complete AAF Constraint Boundary Computations 47
2.4.3.1 Mission Phase 1-2: Takeoff 48
2.4.3.2 Mission Phases 6-7 and 8-9: Supersonic Penetration and Escape Dash 48

2.4.3.3 Mission Phase 7-8: Combat Turn 1 49
2.4.3.4 Mission Phase 7-8: Combat Turn 2 50
2.4.3.5 Mission Phase 7-8: Horizontal Acceleration 50
2.4.3.6 Mission Phase 13-14: Landing 51
2.4.3.7 Maximum Mach Number 52

3. **Mission Analysis** 53
3.1 Concept 53
3.2 Design Tools 55
3.2.1 Case 1: Constant Speed Climb 60
3.2.2 Case 2: Horizontal Acceleration 61
3.2.3 Case 3: Climb and Acceleration 62
3.2.4 Case 4: Takeoff Acceleration 62
3.2.5 Case 5: Constant Altitude/Speed Cruise 63
3.2.6 Case 6: Constant Altitude/Speed Turn 63
3.2.7 Case 7: Best Cruise Mach Number and Altitude 64
3.2.8 Case 8: Loiter 66
3.2.9 Case 9: Warm-up 66
3.2.10 Case 10: Takeoff Rotation 67
3.2.11 Case 11: Constant Energy Height Maneuver 67
3.2.12 Calculation of W_{TO} 68
3.3 Aircraft Weight and Fuel Consumption Data 69
3.3.1 Empty Aircraft Weight Fraction 70
3.3.2 Installed Thrust Specific Fuel Consumption 70
3.4 Example Mission Analysis 71
3.4.1 Weight Fraction Analysis 73
3.4.2 Determination of W_{TO}, T_{SL}, and S 79
3.4.3 First Reprise 81
3.4.4 Complete Weight Fraction Computations 82
3.4.4.1 Mission Phase 1-2: Warm-up and Takeoff 83
3.4.4.2 Mission Phase 2-3: Accelerate and Climb 84
3.4.4.3 Mission Phase 3-4: Subsonic Cruise Climb 86
3.4.4.4 Mission Phase 4-5: Descend 87
3.4.4.5 Mission Phase 5-6: Combat Air Patrol 87
3.4.4.6 Mission Phase 6-7: Supersonic Penetration 88
3.4.4.7 Mission Phase 7-8: Combat 89
3.4.4.8 Deliver Expendables 91
3.4.4.9 Mission Phase 8-9: Escape Dash 91
3.4.4.10 Mission Phase 9-10: Minimum Time Climb 92
3.4.4.11 Mission Phase 10-11: Subsonic Cruise Climb 93
3.4.4.12 Mission Phase 11-12: Descend 93
3.4.4.13 Mission Phase 12-13: Loiter 93
3.4.4.14 Mission Phase 13-14: Descend and Land 93
3.4.4.15 Minimum Fuel-to-Climb Path 94

4. Engine Selection: On-Design Cycle Analysis 97
4.1 Concept 97
4.2 Design Tools 99
4.2.1 Station Numbering 99
4.2.2 Total Property Ratios 100
4.2.3 Mass Flow Rates 103
4.2.4 Component Efficiencies 105
4.2.5 Assumptions 106
4.2.6 Engine Performance Analysis 107
4.2.7 Computational Inputs and Outputs 114
4.3 Finding Promising Solutions 115
4.3.1 Uninstalled Specific Fuel Consumption 118
4.3.2 Uninstalled Specific Thrust 118
4.3.3 On-Design vs Off-Design 120
4.3.4 Influence of the Mixer 123
4.3.5 The Good News 124
4.4 Example On-Design Cycle Analysis 124
4.4.1 Selection of Suitable Ranges of Design Point Parameters 124
4.4.2 Component Design Performance Parameters 125
4.4.3 Analysis of Results 126
4.4.3.1 Subsonic Cruise Climb 126
4.4.3.2 Supersonic Penetration and Escape Dash 128
4.4.3.3 Supersonic Acceleration 128
4.4.4 Integrated Results - Range of Design Choices 129
4.4.5 Sensitivity Analysis 131

5. Engine Selection: Off-Design Cycle Analysis 135
5.1 Concept 135
5.2 Design Tools 136
5.2.1 The Off-Design Problem 136
5.2.2 Assumptions 138
5.2.3 Referencing and the Mass Flow Parameter (MFP) 139
5.2.4 High Pressure Turbine and Coolant Mixers – Off-Design Performance 140
5.2.5 Component Performance Analysis 142
5.2.6 Iterative Solution Scheme 149
5.2.7 Computational Inputs and Outputs 152
5.3 Component Behavior 157
5.3.1 Dimensionless and Corrected Performance Parameters 157
5.3.2 Fan and Compressor Performance Maps 158
5.3.3 Combustor Maps 160
5.3.4 Turbine Maps 161

5.3.5 Component Matching 163
5.3.6 Off-Design Program Predictions 165
5.4 Example Engine Selection: Off-Design Cycle Analysis 167
5.4.1 Critical Flight Conditions 168
5.4.2 Mission Fuel Consumption 169
5.4.3 Getting Started 170
5.4.4 The Base Line Engine 171
5.4.5 The Search 176
5.4.6 AAF Engine: Operational Envelope and Off-Design Performance 179
5.4.7 Second Reprise 180

6. Sizing the Engine, Installed Performance 181
6.1 Concept 181
6.2 Design Tools 185
6.2.1 Subsonic Inlet Drag 185
6.2.2 Supersonic Inlet Drag 187
6.2.3 Exhaust Nozzle Drag 189
6.2.4 Sizing the Inlet Area 194
6.2.5 Sizing the Exhaust Nozzle 196
6.3 Example Engine Sizing 197
6.3.1 Critical Mission Legs for Sizing 197
6.3.2 Number of Engines 199
6.3.3 Engine A100 Required-to Available Thrust Ratio 200
6.3.3.1 Inlet and Exhaust Nozzle Design Parameters - Engine A100 202
6.3.3.2 Installation Losses - Engine A100 204
6.3.4 Evaluation of Engines A95 and A94.5 207
6.4 AAF Engine Performance 208
6.4.1 Installed Performance of AAF Engine 208
6.4.2 Final Reprise 210
6.4.3 Uninstalled Engine Performance Summary 213

PART II ENGINE COMPONENT DESIGN 219

7. Engine Component Design: Global and Interface Quantities 221
7.1 Concept 221
7.2 Design Tools 222
7.2.1 Total Pressure and Total Temperature 222
7.2.2 Corrected Mass Flow Rate 224
7.2.3 Static Pressure, Static Temperature, and Velocity 224
7.2.4 One-Dimensional Flow Area (Annulus Area) 225
7.2.5 Flow Path Force on Component 225

7.3 Engine Systems Design 226
Engine Static Structure 227
Shafts and Bearings 227
Lube System 228
Fuel System 228
Cooling and Bleed Air 228
Starting 229
Overall 229
7.4 Example Engine Global and Interface Quantities 229
7.4.1 Engine Design Flow Properties 229
7.4.2 Predicted Component Performance 231
7.4.3 Component Operating Lines 235

8. Engine Component Design: Rotating Turbomachinery 237
8.1 Concept 237
8.2 Design Tools 238
8.2.1 Fan and Compressor Aerodynamics 239
Repeating Stage, Repeating Row, Mean-Line Design 239
Axial Variation (Multi-staging) 248
Radial Variation (Free-Vortex Flow) 250
8.2.2 Turbine Aerodynamics 252
Zero Exit Swirl, Constant Axial Velocity, Mean-Line Stage Design 252
Other Turbine Design Considerations 261
8.2.3 Engine Life 263
Rotor Airfoil Centrifugal Stress 266
Rim Web Thickness 268
Disk of Uniform Stress 269
Disk Torsional Stress 271
Disk Thermal Stress 272
Airfoil Aspect Ratio 272
8.3 Example Engine Component Design: Rotating Turbomachinery 273
8.3.1 Fan Design - AAF Engine 274
8.3.2 High Pressure Turbine Design - AAF Engine 280
8.3.3 High Pressure Compressor Design - AAF Engine 286
8.3.4 Low Pressure Turbine Design - AAF Engine 290
8.3.5 Closure 293

9. Engine Component Design: Combustion Systems 295
9.1 Concept 295
9.1.1 Combustion Processes 296
9.1.2 Ignition 298
9.1.3 Combustion Stability 300
9.1.4 Length Scaling 301

9.1.5 Estimate of Combustion System Total Pressure Ratio 303
9.1.6 Diffusers 305
9.1.6 Fuels 307
9.2 Design Tools - Main Burners 308
9.2.1 Types 308
9.2.2 Air Flow Distribution and Cooling Air 309
9.2.3 Main Burner Components 311
9.2.4 Performance Parameters 313
Combustion Efficiency 313
Overall Total Pressure Loss 314
Exit Temperature Profile 315
Ignition 317
9.2.5 Main Burner Design Parameters 318
9.3 Design Tools - Afterburners 320
9.3.1 Introduction 320
9.3.2 Afterburner Components 321
Diffuser 322
Fuel Injection, Atomization, and Vaporization 322
Ignition 323
Flame Stabilization 324
Multiple Flame Holder Arrays 327
Flame Spread 328
Afterburner Liner 328
Total Pressure Loss 328
9.3.3 Afterburner Design Parameters 329
9.4 Example Engine Component Design: Combustion Systems 331
9.4.1 Main Burner Design - AAF Engine 331
9.4.2 Afterburner Design - AAF Engine 345
9.4.3 Closure 351

10. Engine Component Design: Inlets and Exhaust Nozzles 353
10.1 Concept 353
10.2 Inlets 354
10.2.1 Introduction 354
10.2.2 Design Tools - Subsonic Inlet 354
Inlet Total Pressure Ratio 355
Inlet Sizing - Throat Diameter 356
Effect of Aircraft Attitude and Crosswind 357
Inlet Flow Distortion 358
Inlet Drag and Engine-out Drag 360
Nacelle and Interference Drag 363
Diffuser 364

Zero Flight Speed 365
10.2.3 Design Tools - Supersonic Inlets 366
Inlet Types 366
Total Pressure Recovery 374
Example External Compression Inlet (Part I) 376
Mass Flow Characteristics 377
Boundary Layer Control 382
Inlet Design and Sizing 383
Example External Compression Inlet (Part II) 387
Inlet/Airframe Interference Effects on Inlet Distortion 391
Subsonic Diffuser 393
Examples of Existing Inlet Designs 393
Flow Separation from Sharp Lip Inlets 395
10.3 Exhaust Nozzles 395
10.3.1 Nozzle Types 396
10.3.2 Nozzle Functions 398
Engine Back Pressure Control 398
Exhaust Nozzle Area Ratio 400
Thrust Reversing and Thrust Vectoring 401
10.3.3 Design Tools - Exhaust Nozzles 402
Total Pressure Loss 402
Nozzle Coefficients 403
Off-Design Predicted Performance 413
10.4 Example Engine Component Design: Inlet and Exhaust Nozzle 414
10.4.1 Inlet Design - AAF Engine 414
10.4.2 Exhaust Nozzle Design - AAF Engine 426
10.4.3 Closure 431

Epilogue 433

Appendices 435

A. Units and Conversion Factors 437
Nominal Values of Gas Constant and Specific Heats 438

B. Characteristics of the Standard Atmosphere 439

C. Compressible Flow Functions 441
$\gamma = 1.4$ 442
$\gamma = 1.33$ 447
$\gamma = 1.3$ 452

D. Constant Area Mixer Analysis 457
Example Results 462
Summary of Equations – Constant Area Mixer 463

E. Mixed Flow Turbofan Engine On-Design Cycle Analysis Equations 467

F. Mixed Flow Turbofan Engine Off-Design Cycle Analysis Equations 473

G. High Bypass Ratio Turbofan Engine 481
On-Design Analysis 482
Summary of High Bypass Ratio Turbofan Engine On-Design Cycle Analysis Equations 485
Example On-Design Results 490
Optimum Bypass Ratio (α^*) 491
Example On-Design Results - Optimum Bypass Ratio 494
Off-Design Analysis 495
Summary of High Bypass Ratio Turbofan Engine Off-Design Cycle Analysis Equations 498
Example Off-Design Results 504

H. Turboprop Engine 507
On-Design Analysis 508
Summary of Turboprop Engine On-Design Cycle Analysis Equations 513
Example On-Design Results 517
Optimum Total Temperature Ratio for the Low Pressure Turbine (τ_{tL}^*) 518
Example On-Design Results - Optimum τ_{tL} 521
Off-Design Analysis 522
Summary of Turboprop Engine Off-Design Cycle Analysis Equations 526
Example Off-Design Results 530

I. Propeller Design Tools 533
Propeller Momentum or Actuator Disk Theory 534
Propeller Blade Element or Strip Theory 538
Radial Variations 541
Real Propeller Behavior 541
Structural Design 544
Variable Speed vs Constant Speed 546
Turboprop Cycle Performance Characteristics 546

J. Ramjet Engine 549
On-Design Analysis 550
Summary of Ramjet Engine On-Design Cycle Analysis Equations 551

Example On-Design Results 553
Off-Design Analysis 554
Summary of Ramjet Engine Off-Design Cycle Analysis Equations 556
Example Off-Design Results 559

K. Example Material Properties 561
Aluminum 2124 Alloy 562
Titanium 6246 Alloy 566
Inconel 601 567
Hastelloy X 568
Mar-M 509 571
René 80 572
Nimonic 105 574
