Nonlinear Programming Codes

Information, Tests, Performance

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek
Inv.-Nr. B 18501

Springer-Verlag
Berlin Heidelberg New York 1980

Contents

Chapter I : Introduction 1

Chapter II : Optimization methods

1. Line-search algorithms 4
2. Quadratic programming 10
3. Unconstrained optimization 13
4. Penalty methods 16
5. Multiplier methods 18
6. Quadratic approximation methods 20
7. Generalized reduced gradient methods 23
8. The method of Robinson 26

Chapter III : Optimization programs

1. Program organization 27
2. Description of the programs 31

Chapter IV : The construction of test problems

1. Fundamentals of the test problem generator 51
2. General test problems 54
3. Linearly constrained test problems 55
4. Degenerate test problems 56
5. Ill-conditioned test problems 57
6. Indefinite test problems 59
7. Convex test problems 60

Chapter V : Performance evaluation

1. Notations 61
2. Efficiency, reliability, and global convergence 64
3. Performance for solving degenerate, ill-conditioned, and indefinite problems 77
4. Sensitivity to slight variations of the problem 85
5. Sensitivity to the position of the starting point 88
6. Ease of use 93
7. How to get a final score 97

Chapter VI : Conclusions, recommendations, remarks

1. Final conclusions 103
2. Recommendations for the design of optimization programs 108
3. Some technical details 110

Appendix A : Numerical data for constructing test problems 113

Appendix B : Sensitivity analysis for the test problems 120

Appendix C : Further results 124

Appendix D : Evaluation of significance factors 164
