

STRENGTH OF CRACKED CONCRETE

Part 1 --- Shear Strength of Conventional Reinforced Concrete Beams, Deep Beams, Corbels, and Prestressed Reinforced Concrete Beams without Shear Reinforcement

TABLE OF CONTENTS

	page
Preface	i
Summary	ii
Notations	1
I. Introduction	4
II. Shear failure mechanism of reinforced concrete beams with critical diagonal cracks	7
2.1 Diagonal cracks and shear failure	7
2.2 Shear failure mechanism in the theory of plasticity	21
2.3 Maximum cracking moment and diagonal cracking load	28
2.4 Load carrying capacity of cracked reinforced concrete beam	32
2.5 Effective compressive strength and effectiveness factor of uncracked and cracked concrete	34
2.6 General assumptions	41
III. Shear capacity of conventional reinforced concrete beams, deep beams, corbels and prestressed beams without shear reinforcement	42
3.1 Shear capacity of conventional beams subjected to concentrated loading	42

3.1.1 Shear capacity according to the usual plastic theory	43
3.1.2 Shear capacity according to plastic theory with a critical diagonal crack	43
3.1.3 Shear capacity determined by the diagonal cracking load	45
3.1.4 Starting position of the critical diagonal crack and shear capacity	48
3.1.5 Parameter studies	49
3.1.6 Experimental verification	53
3.2 Shear capacity of deep beams and corbels	68
3.3 Shear capacity of prestressed beams under concen- trated loading	69
3.3.1 Shear capacity according to plastic theory with a critical diagonal crack	70
3.3.2 Shear capacity determined by the diagonal cracking load	72
3.3.3 Starting position of the critical diagonal crack and shear capacity	73
3.3.4 Parameter studies	74
3.3.5 Experimental verification	76
3.4 Shear capacity of conventional beams subjected to uniform loading	80
3.4.1 Shear capacity according to the usual plastic theory	81
3.4.2 Shear capacity according to plastic theory with a critical diagonal crack	86

3.4.3 Shear capacity determined by the diagonal cracking load	88
3.4.4 Starting position of the critical diagonal crack	90
3.4.5 Experimental verification	90
IV. Conclusion	94
