CONTENTS

1. PROPAGATION OF WAVES IN DUCTS 1

1.1 Plane Waves in an Inviscid Stationary Medium 2

1.2 Three-Dimensional Waves in an Inviscid Stationary Medium 5

1.2.1 Rectangular Ducts 6

1.2.2 Circular Ducts 9

1.3 Waves in a Viscous Stationary Medium 13

1.4 Plane Waves in an Inviscid Moving Medium 17

1.5 Three-Dimensional Waves in an Inviscid Moving Medium 19

1.6 One-Dimensional Waves in a Viscous Moving Medium 22

1.7 Waves in Ducts with Compliant Walls (Dissipative Ducts) 26

1.7.1 Rectangular Duct with Stationary Medium 26

1.7.2 Rectangular Duct with Moving Medium 30

1.7.3 Circular Duct with Stationary Medium 35

1.7.4 Circular Duct with Moving Medium 36

1.8 Concluding Remarks 39

References 39

2. THEORY OF ACOUSTIC FILTERS 42
2.1 Units for the Measurement of Sound 43
2.2 Uniform Tube 44
2.3 Radiation Impedance 47
2.4 Reflection Coefficient at an Open End 49
2.5 A Lumped Inertance 50
2.6 A Lumped Compliance 51
2.7 End Correction 52
2.8 Electroacoustic Analogies 53
2.9 Electrical Circuit Representation of an Acoustic System 54
2.10 Acoustical Filter Performance Parameters 55
2.10.1 Insertion Loss, IL 55
2.10.2 Transmission Loss, TL 58
2.10.3 Level Difference, LD 59
2.10.4 Comparison of the Three Performance Parameters 60
2.11 Lumped-Element Representations of a Tube 61
2.12 Simple Area Discontinuities 62
2.13 Gradual Area Changes 64
2.13.1 Conical Tube 65
2.13.2 Hyperbolic Tube 67
2.14 Extended-Tube Resonators 68
2.15 Helmholtz Resonator 70
2.16 Concentric Hole–Cavity Resonator 71
2.17 An Illustration of the Classical Method of Filter Evaluation 72
2.18 The Transfer Matrix Method 75
2.19 An Algebraic Algorithm for Velocity Ratio VR_{n+1} 85
2.19.1 Development of the Algorithm 85
2.19.2 Formal Enunciation and Illustration of the Algorithm 86
2.20 Synthesis Criteria for Low-Pass Acoustic Filters 88
2.21 Analysis of Higher-Order Modes in Expansion Chambers 92
2.21.1 Compatibility Conditions at Area Discontinuities 94
2.21.2 Extending the Frequency Range 96
2.21.3 Extension to Other Muffler Configurations 101
References 102

3. AEROACOUSTICS OF EXHAUST MUFFLERS 104
3.1 The Exhaust Process 104
3.2 Finite Amplitude Wave Effects 107
3.3 Mean Flow and Acoustic Energy Flux 108
3.4 Aeroacoustic State Variables 112
3.5 Aeroacoustic Radiation 114
3.6 Insertion Loss 119
3.7 Transfer Matrices for Tubular Elements 121
3.7.1 Uniform Tube 121
3.7.2 Extended-Tube Elements 123
3.7.3 Simple Area Discontinuities 128
3.7.4 Physical Behavior of Area Discontinuities 129
3.8 Transfer Matrices for Perforated Elements 130
3.8.1 Two-Duct Elements 131
3.8.2 Three-Duct Elements 138
3.8.3 Some Remarks 147
3.9 Acoustic Impedance of Perforates 147
References 150

4. TIME-DOMAIN ANALYSIS OF EXHAUST SYSTEMS 153
4.1 Gas-Dynamic Equations and Characteristics 154
4.2 Mesh Method of Interpolation 164
4.3 Exhaust Valve/Port or Cavity–Pipe junction 168
4.4 Thermodynamics of the Cylinder/Cavity 175
4.5 Simple Area Discontinuities 177
4.6 Extended-Tube Resonators or Three-Tube Junction Elements 181
4.7 Scheme of Computation 184
4.8 Noise Radiation 185
4.9 Some Typical Results 186
4.10 Linear Wave Approach to Time-Domain Prediction 190
References 191

5. FLOW-ACOUSTIC MEASUREMENTS 194
5.1 A Passive Subsystem or Termination 194
5.2 The Probe-Tube Method 195
5.2.1 Evaluation of the Attenuation Constant and Wave Number 196
5.2.2 Evaluation of $\alpha^{\pm}$ and $k^{\pm}$ 197
5.2.3 Evaluation of the Reflection Coefficient $|R| \exp(j\theta)$ 198
5.2.4 Experimental Setup 199

5.3 The Two-Microphone Method 201
5.4 Transfer Function Method 205
5.5 Transient Testing Method 207
5.6 Comparison of the various Methods for a Passive Subsystem 210
5.7 An Active Termination—Aeroacoustic Characteristics of a Source 211
5.8 Direct Measurement of Source Impedance $Z_{c,s}$ 212
5.9 Indirect Measurement of Source Characteristics $p_{c,s}$ and $Z_{c,s}$ 216
5.9.1 Impedance-Tube Method 216
5.9.2 Method of External Measurements 219
5.9.3 Method of Finite Wave Analysis 226
5.10 A Comparison of the Various Methods for Source Characteristics 226
References 227

6. DISSIPATIVE DUCTS 230
6.1 Transfer Matrix Relation for a Dissipative Duct 231
6.2 Transverse Wave Numbers for a Stationary Medium 235
6.3 Normal Impedance of the Lining, Z_w 236
6.4 Transmission Loss 241
6.5 Rigorous Analysis and Optimization of Dissipative Ducts 243
6.6 Parallel-Baffle Ducts 244
6.7 The Effect of Mean Flow 248
6.8 The Effect of Terminations on the Performance of Dissipative Ducts 249
6.9 Lined Bends 250
6.10 Plenum Chambers 251
6.11 Flow-Generated Noise 252
References 253

7. FINITE ELEMENT METHODS FOR MUFFLERS 254
7.1 A Single Element 255
7.2 Variational Formulation of Finite Element Equations 261
7.3 The Galerkin Formulation of Finite Element Equations 266
7.4 Evaluation of Overall Performance of a Muffler 269
7.5 Numerical Computation 271

7.6 An Illustration 274
References 282

8. DESIGN OF MUFFLERS 285
8.1 Requirements of an Engine Exhaust Muffler 285
8.2 Acoustic Considerations 286
8.3 Back-Pressure Considerations 297
8.4 Practical Considerations 299
8.5 Design of Mufflers for Ventilation Systems 301
8.6 Active Sound Attenuation 303
References 305

APPENDIX 1 BESSEL FUNCTIONS AND SOME OF THEIR PROPERTIES 307
APPENDIX 2 ENTROPY CHANGES IN ADIABATIC FLOWS 311
A2.1 Stagnation Pressure and Entropy 311
A2.2 Pressure, Density, and Entropy 313
APPENDIX 3 NOMENCLATURE 315

INDEX 318
