

L. P. Hyvärinen

Information Theory
for
Systems Engineers

Technische Hochschule Darmstadt
FACHBEREICH INFORMATIK
B I B L I O T H E K
Inventar-Nr.: 9069
Sachgebiete: E.4/HYV
Standort:

Springer-Verlag Berlin Heidelberg New York 1970

Contents

Chapter 1. Introduction

1.1. Properties of Information	1
1.2. Levels of Information	1
1.2.1. Syntactics	2
1.2.2. Semantics	2
1.2.3. Pragmatics	3
1.2.4. Emotional Use of Information	5
1.3. Information Media	5
1.4. Reversible and Irreversible Processes	6

Part I Discrete Information Systems

Chapter 2. Noiseless Channels

2.1. Character Set and Channel	9
2.2. Channel Capacity	10
2.2.1. Capacity of a Punch Card	12
2.3. Information Content, Entropy	13
2.3.1. Example	13
2.3.2. Entropy	15
2.4. Other Measures of Information	18

Chapter 3. Coding for Noiseless Channels

3.1. Decision Tree	19
3.2. Example of Coding and its Efficiency	21
3.3. Optimum Codes	24
3.3.1. Entropy Inequality	25
3.3.2. Conditions for Optimum Code	26
3.3.3. An Algorithm for Optimum Code	30
3.3.4. Block Coding—Shannon-Fano Method	34
3.3.5. Huffman Optimum Code	35
3.4. End of Message Condition	36
3.5. Decipherable and Instant Codes	37

Chapter 4. Joint Events, Natural Languages

4.1. Joint Events	38
4.2. Conditional Information	43
4.3. Natural Languages	47

4.3.1. Optimum Codes of Higher Order	48
4.3.2. Information and Coding Procedure	49
4.3.3. Redundancy and Information Rate	51

Chapter 5. Applications of Noiseless Coding

5.1. Data Compression	56
5.1.1. Redundancy Compression	56
5.1.2. Storage Device Coding System	58
5.2. Information Retrieval	59
5.2.1. Search of Type 1	60
5.2.2. Search of Type 2	62
5.2.3. KWICK-Index, Key Words	65
5.3. Classification—Taxonomy	67
5.3.1. Typicality and Similarity	68
5.3.2. Taxonomy as a Coding System	71
5.4. Cryptography	71

Chapter 6. Noisy Channel

6.1. Channel Matrix and Information Rate	73
6.2. Capacity of Noisy Channel	76
6.2.1. Symmetric Channel	76
6.2.2. Unsymmetric Channel	77
6.3. Ideal Observer	79
6.3.1. Interpretation with Minimum Error	80
6.3.2. Interpretation with Maximum Information	82

Chapter 7. Error Checking and Correcting Codes

7.1. Hamming Distance, Parity Checking	84
7.1.1. Hamming Distance	85
7.1.2. Redundancy Codes	86
7.2. Error Correcting Codes	87
7.2.1. Fundamental Theorem	89
7.2.2. Hamming Bound	89
7.3. Linear Codes	90
7.3.1. Generating Error Checking Codes	91
7.3.2. Locating the Error	92
7.3.3. Distance Matrix	93
7.3.4. Concatenation	94
7.4. Some Other Redundancy Codes	95
7.5. Checking Variable Length Codes	97

Part II Continuous Information Systems

Chapter 8. Properties of Continuous Channels

8.1. Continuous Signals	99
8.2. Sampling and Desampling	100
8.3. Gaussian Noise	102

8.4. Entropy of Continuous Information	105
8.5. Information Rate and Channel Capacity	107
Chapter 9. Detection of Continuous Signals	
9.1. Principle of Ideal Observer	109
9.1.1. Non-Redundant Signal	110
9.1.2. Redundant Signal	113
9.2. Detection of a Stepwise Signal	115
9.2.1. Signal with Gaussian $P(x)$ and Noise	116
9.2.2. Signal with Discrete $P(x)$ and Gaussian Noise	118
9.2.3. Quantizing Noise	120
9.3. Correlation Reception	122
9.3.1. Numerical Example	123
9.3.2. Distances between Waveforms	124
9.3.3. Unequal Signal Powers and Probabilities	127
Chapter 10. Information Filters	
10.1. Convolution Filter	128
10.2. Real-time and Off-line Filters	133
10.3. Filtering Redundant Time Series	135
Appendix A Fourier Transform and Related Concepts	139
Appendix B Binary Logarithms and Entropies	152
Appendix C Computer Programs	152
Appendix D Problems and Solutions	157
