CONTENTS

List of Tables	xii
List of Figures	xv
Preface	xvii
1 MANAGING THE EARTH'S BIOLOGICAL ASSETS	1
2 CONSUMER WELFARE MEASUREMENT	6
2.1 Consumer Demand Theory	6
The primal problem	7
The dual problem	8
Restrictions on demand systems	9
Utility maximisation: Some issues	11
2.2 Measuring Changes in the Well Being of Consumers	13
Consumer surplus	13
Compensating and equivalent variations	19
2.3 Public Goods and Welfare Change	25
2.4 General Equilibrium Considerations	28
General equilibrium demand curve	29
Measuring welfare in one market with distortions in other markets	30
Appendix: Consumer Surplus and Path Dependency	32
3 PRODUCER WELFARE AND AGGREGATION OF WELL BEING	35
3.1 Measuring Producer Surplus via the Input Market	36
Changes in input prices	36
Resource income and backward-bending supply	40

Sequential measurement versus measurement in a single market	45
Quantity restrictions	46
3.2 Aggregation of Economic Welfare	48
Aggregation of producer welfare	48
Aggregation of consumer welfare	49
Welfare effects impacting more than one market	49
Welfare impacts in one market: Empirical considerations	52
Aggregate welfare impacts: An illustration	54
3.3 Compensation Tests and Social Welfare Functions	55
4 RESOURCE RENTS AND RENT CAPTURE	59
4.1 What is Rent?	59
Transfer price or opportunity cost	63
Resource and scarcity rents	63
Quasi-rents	64
Other types of rent	65
4.2 Agricultural Land and Rent Capture	66
4.3 Taxation, Charges and Rent Capture in Forestry	69
Rent capture and efficiency	70
Methods of rent capture	73
Rent capture in British Columbia	77
Rent capture in Indonesia	80
Rent dissipation in forestry	83
4.4 Property Rights and Rent Dissipation in Fisheries	86
Property rights and rent dissipation	86
Management instruments	92
5 VALUING NONMARKET BENEFITS	100
5.1 Expenditure Function Approach	101
Market valuation of public goods via physical linkages	101
Market valuation of public goods via behavioural linkages	104
Property values, benefit estimation and hedonic pricing	110
5.2 Recreation Demand and the Travel Cost Method	113
Household production function approach	115
Limited dependent variable models	116
Travel cost model with site attributes	117

5.3 The Contingent Valuation Method	120
Welfare measurement using CVM: Theory	123
Contingent valuation survey techniques: Some issues	132
Is the contingent valuation method a panacea?	134
5.4 Other Direct Valuation Methods	140
Choice experiments	140
Constructed preferences	142
Fuzzy logic and its potential for nonmarket valuation	143
5.5 Discussion	151
6 EVALUATING NATURAL RESOURCE POLICY	152
6.1 Policy Evaluation and the Role of Government	153
6.2 A Brief Background to Cost-Benefit Analysis	156
6.3 Choice of Social Discount Rate	160
The discount rate and biological assets	162
6.4 Mechanics of Cost-Benefit Analysis	163
6.5 Applications of Cost-Benefit Analysis	167
Ozone damage and opportunity cost	167
Water quality improvements and composting livestock wastes	168
Evaluation of British Columbia's Forest Practices Code	170
6.6 Conclusions	182
7 ECONOMIC DYNAMICS AND RENEWABLE RESOURCE MANAGEMENT	183
7.1 Background	184
7.2 Optimal Population Size and Economic Dynamics	189
Managing population quality: Micro-evolution of species	194
7.3 Extinction	195
Bioeconomic models and extinction	195
Ecological considerations and extinction	199
7.4 Property Rights and Dynamics	201

7.5 Uncertainty in Resource Exploitation	204
Extinction revisited: Minimum viable populations and uncertainty	207
Meta-populations: Stochastic and spatial aspects	211
7.6 Beyond Bioeconomic Models? Species Interaction	215
Appendix I: Deterministic Optimal Control Methods	218
Discounting	221
Discrete maximum principle and Bellman equation	223
Appendix II: Stochastic Dynamic Optimisation	224
Introduction to Ito calculus	225
Stochastic dynamic programming	229
8 SUSTAINABLE DEVELOPMENT AND CONSERVATION	232
8.1 Background	233
What is to be sustained?	233
Viewpoints and sustainability	235
Sustainable consumption (utility)	236
8.2 Sustainability Paradigms: Maintaining Capital Stocks	238
Strong sustainability: The ecological paradigm	238
Weak sustainability: The neoclassical paradigm	240
The paradigms in contrast	243
8.3 Sustainable Development: Related Concepts	245
Economics of conservation	245
The safe minimum standard (SMS)	247
Coevolutionary development	249
Population pressure	253
Resource scarcity	256
8.4 Sustainability Indicators and Evidence	260
Weak and strong sustainability: Evidence	260
The ecological footprint	262
8.5 The Environmental Kuznets Curve	266
8.6 Conclusions	268

9 BIOLOGICAL DIVERSITY AND HABITAT	270
9.1 Biological Diversity: Background	271
What are species?	272
At what rate are species disappearing?	273
Measuring biodiversity	280
9.2 Economics, Values and Endangered Species Legislation	285
Takings	288
Takings and endangered species legislation	289
9.3 Economic Values and Biodiversity	293
Resilience and quasi-option value	293
How valuable are species and their habitat?	299
9.4 Nature Conservation and Protected Areas	307
Economic considerations	308
Defining protected areas	311
Global distribution of protected areas: General trends	313
9.5. Conclusions	318
10 THREATENED AND ENDANGERED SPECIES	319
10.1 Protecting Biological Diversity by Treaties	320
10.2 The African Elephant	325
Welfare economics of an ivory trade ban (no poaching)	326
The ivory trade ban and elephant numbers	329
Open-access, the trade ban and poaching	338
Enforcement to protect elephants	341
Declining marginal nonuse benefits and strategic culling	348
Conclusions concerning the ivory trade ban	352
Joint harvesting of endangered species: Rhinoceros and elephants	354
10.3 Game Ranching to Conserve Wildlife in Kenya	355
Bioeconomic model of game ranching	358
Empirical model of game cropping in Kenya	360
Economics of game cropping: Policy insights	362
10.4 Should Whales be Harvested?	364
10.5 Conclusions	369

11 FOREST MANAGEMENT	371
11.1 Forest Competitiveness and Certification	375
Public ownership of forestlands	375
Silvicultural investment and competitiveness	376
Forest certification and eco-labelling	379
11.2 Optimal Forest Rotation Age	382
Maximising sustainable yield	382
Maximising net benefits from a single cut: Fisher rotation age	383
Faustmann or financial rotation age	385
Hartman rotation age: Non-timber benefits	391
Hartman-Faustmann rotation age	392
Summary	395
11.3 The Allowable Cut Effect and Even Flow Constraints	396
11.4 Climate Change and Forestry	398
Managing forests for carbon fluxes	402
Planting trees on marginal agricultural land for carbon uptake	411
11.5 Conclusions	428
12 TROPICAL DEFORESTATION	429
12.1 Tropical Deforestation: Global Patterns and Rates	431
12.2 Economic Value of Tropical Forests	435
Production functions of tropical forests	436
Regulatory functions of tropical forests	437
Habitat, biodiversity and nonuse values	439
Summary	440
12.3 Causes of Tropical Deforestation	441
Commercial logging	442
Conversion to agriculture	443
Economic models of deforestation: Farm-level, regional and global	444
Income and deforestation	448
Population and deforestation	450
Role of government in tropical deforestation	451
12.4 Is Tropical Deforestation Excessive?	455
International forest conservation measures	458

Trade measures	460
International transfers	461
12.5 Conclusions	462
13 CONCLUDING REMARKS	464
REFERENCES	469
