THE NUMERICAL ANALYSIS PROBLEM SOLVER®

REGISTERED TRADEMARK

Staff of Research and Education Association,
Dr. M. Fogiel, Director

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek
Inv.-Nr. B 20910

FB Mathematik
TU Darmstadt
58365572

Research and Education Association
505 Eighth Avenue
New York, N. Y. 10018

CONTENTS

Chapter No. **Page No.**

1 INTRODUCTION TO NUMERICAL CALCULATION 1

Fundamentals of Numerical Analysis 1
Principles of Computer Operations 9
Number Representations 12
Fortran Rules and Vocabulary 19

2 ERRORS AND APPROXIMATIONS IN NUMERICAL ANALYSIS 26

Significant Figures, Errors 26
Absolute and Relative Errors 29
Truncation and Round-off Errors 31
Methods of Approximation 36

3 SERIES 51

Infinite Series(Test For Convergence & Divergence) 51
Taylor's Series Expansion 58
MacLaurin's Series Expansion 74
Power Series Expansion 80
Laurent Series Expansion 97

4 FINITE DIFFERENCE CALCULUS 106

Finite Differences 106

Difference Tables and Difference Formulas 115
Difference Operators 127

5 INTERPOLATION AND EXTRAPOLATION 132

Interpolation Techniques 132
Linear Interpolation 154
Inverse Interpolation Techniques 163
Extrapolation Techniques 169

6 SIMULTANEOUS LINEAR ALGEBRAIC EQUATIONS AND MATRICES 173

Gaussian Elimination Method 173
Jacobi and Gauss-Seidel Methods 181
Matrix Mathematics 194

7 ROOTFINDING FOR NONLINEAR EQUATIONS 210

The Iterative Method For Solving Nonlinear Equations 210
Newton's Method 220
Newton-Raphson Method 230
The Method of False Position(Regula Falsi) 240
Other Rootfinding Methods 244

8 LEAST SQUARES - CURVE FITTING 256

Least-Squares Approximation 256
Data Smoothing 285
Approximate Differentiation 287

9 NUMERICAL DIFFERENTIATION 297

General Applications of Numerical Differentiation 297
Truncation Error Using Taylor's Formula 300
Differentiation By Lagrange's Formula, Newton's Formula and Stirling's Formula 308
Approximate Differentiation 320

10 NUMERICAL INTEGRATION 328

General Applications of Numerical Integration 328
Numerical Integration: Simpson's Rule, Trapezoidal Rule, Weddle's Rule, and Romberg's Method 336
Other Methods For Numerical Integration 363

11 LINEAR SYSTEMS 369

Vector Spaces, Matrices 369
Matrix Norms and Applications 399
Matrix Factorization 408
Iterative Methods 418

12 MATRIX EIGENVALUES AND EIGENVECTORS 431

Eigenvalues and Eigenvectors of a matrix 431
Eigenvalues and Eigenvectors of Linear Operators 469
Applications of The Spectral Theorem 475

13 LINEAR PROGRAMMING 480

Basic Problem 480
Simplex Method 488
Duality 503
Other Optimization Problems 510

14 FOURIER TRANSFORMS 519

Properties of Fourier Series 519
Fourier Series Expansion 529
Differentiation of Fourier Series 552
Fourier Integrals 557

15 DIFFERENCE EQUATIONS 570

General Applications of Difference Equations 570
Boundary Value Problems 580
Motivation: Particular Solutions 589

16 DIFFERENTIAL EQUATIONS 595

Applications of First Order and Second Order Differential Equations 595
Euler and Runge-Kutta Methods 613
Boundary Value Problems 634
Other Methods For Solving Intial-Value Problems in Ordinary Differential Equations 668

17 PARTIAL DIFFERENTIAL EQUATIONS 707

Solution of General Partial Differential Equations 707
Formulation of Partial Differential Equations 714
Heat Equations 718
Miscellaneous Problems and Applications 737

18 MONTE CARLO METHODS 766

Monte Carlo Random Number Distribution 766
Sampling Simulation 768
Queuing Models and Game Theory 772
Monte Carlo Applications to Integral Problems 783

19 APPLICATIONS OF FORTRAN LANGUAGE IN NUMERICAL ANALYSIS 786

Computer Manipulations with Matrices 786
Evaluating Functions 805
Roots of Equations 825
Numerical Integration Methods in Fortran Programs 837
Solutions of Differential Equations 848

INDEX 859

APPENDIX 873
