

distributions in statistics

distributions

A WILEY-INTERSCIENCE PUBLICATION

JOHN WILEY & SONS,

New York • Chichester • Brisbane • Toronto • Singapore

Contents

1

Preliminary Information	1
1 Introduction	1
2 Finite Difference Calculus	1
3 Special Mathematical Functions: Definitions and Formulas	5
4 Calculus of Probability	13
5 Moments, Cumulants, and Generating Functions	17
6 Statistical Techniques (Estimation)	23
7 Miscellaneous	26
7.1 Geometrical Concepts	26
7.2 Truncation and Censoring — Order Statistics	26
7.3 Mixture Distributions	27
7.4 Sufficiency	28
7.5 Statistical Differentials	28
<i>References</i>	30

2

Discrete Distributions — General	31
1 Lattice Distributions	31
2 Probability Generating Functions	31
3 Generalized Power Series Distributions	33
4 Systems Defined by Difference Equations	36
5 Some Methods of Estimation	44
6 Approximations	46
<i>References</i>	48

3

Binomial Distribution	50
1 Definition	50
2 Genesis	50
3 Historical Remarks	51
4 Moments and Generating Functions	51
5 Properties	53
6 Order Statistics	56
7 Estimation of Parameters	56
7.1 Point Estimation	56
7.2 Confidence Intervals	58
8 Approximations and Bounds	61
8.1 Approximations	61
8.2 Bounds	68
9 Tables and Nomographs	71
10 Truncated Binomial Distribution	73
11 Mixtures of Binomial Distributions	76
12 Applications	79
13 <u>Related Distributions</u>	80
<i>References</i>	82

4

Poisson Distribution	87
1 Definition and Genesis	87
2 Historical Remarks	88
3 Moments and Generating Functions	90
4 Properties	92
5 Characterizations	93
6 Estimation	94
6.1 Point Estimation	94
6.2 Confidence Intervals	96
7 Approximations to the Poisson Distribution	98
8 Tables	102
9 Applications	103
10 Modified Poisson Distributions	104
10.1 Truncated Poisson Distributions	104
10.2 The Generalized Poisson Distribution	109
10.3 Mixtures of Poisson Distributions	111
10.4 Displaced Poisson Distribution	113
10.5 Generalization of The Poisson Law	113

11 Relation with other Distributions	114
<i>References</i>	116

5

Negative Binomial Distribution	122
1 Definition	122
2 Geometric Distribution	123
3 Historical Remarks	124
4 Genesis	124
5 Moments and Mode	125
6 Computing Formula and Approximations	127
7 Tables	130
8 Estimation of Parameters	131
9 Applications	135
10 Truncated Negative Binomial Distribution	137
11 Distributions Related to the Negative Binomial	138
<i>References</i>	139

6

Hypergeometric Distribution	143
1 Genesis and Definition	143
2 Moments and Generating Functions	144
3 Properties	145
4 Estimation	146
5 Approximations	148
6 Tables	152
7 Applications	152
8 Related Distributions	155
8.1 Positive Hypergeometric Distribution	155
8.2 Compound Hypergeometric Distributions	157
8.3 Negative Hypergeometric Distribution	157
8.4 Noncentral Hypergeometric Distributions	158
8.5 Generalized Hypergeometric Distributions	158
8.6 'Extended' Hypergeometric Distributions	160
<i>References</i>	160

7

Logarithmic Series Distribution	166
1 Definition and Properties	166
2 Historical Remarks and Genesis	169
3 Applications	170
3.1 Sampling of Quadrats for Plant Species	171
3.2 Distribution of Animal Species	171
3.3 Population Growth	172
3.4 Economic Applications	173
4 Approximations	173
5 Tables	175
6 Estimation	175
7 Characterization	177
8 Truncated Logarithmic Series Distribution	178
9 Related Distributions	179
<i>References</i>	181

8

Some Compound, Generalized and Modified Discrete Distributions	183
1 Introduction	183
2 Compound Distributions	183
3 'Generalized' Distributions	202
4 'Modified' Distributions	204
5 Special Distributions	209
5.1 Thomas Distribution	209
5.2 Log-Zero-Poisson Distribution	211
<i>References</i>	213

9

Contagious Distributions	216
1 Introduction and Historical Remarks	216
2 Neyman's Type A Distribution	216
2.1 Definition	216
2.2 Moments and Other Properties	218
2.3 Tables and Approximations	220
2.4 Estimation	222
2.5 Applications	226

3	Generalization of Neyman's Type A Distribution	226
4	Pólya-Eggenberger Distribution	229
4.1	Definition	229
4.2	Inverse Pólya-Eggenberger Distribution	232
5	Woodbury Distributions	232
6	Some Other Related Distributions	234
	<i>References</i>	236

10

Some Miscellaneous Discrete Distributions (Univariate)	238
1 Introduction	238
2 Discrete Rectangular Distribution	239
3 Word Frequency Distributions	240
3.1 Zeta Distribution (Zipf-Estoup Law)	240
3.2 Yule Distribution	244
4 Hyper-Poisson and Factorial Distributions	248
4.1 Hyper-Poisson Distributions	248
4.2 Factorial Distributions	250
5 Occupancy Distributions	251
6 Distributions Associated with Queues	253
7 Runs	255
7.1 Runs of Like Elements	255
7.2 Runs Up and Down	257
7.3 Records	258
8 Distributions Based on Partial Sums	261
9 Matching Distributions	264
10 Absorption Distributions	266
11 'Interrupted' Distributions	269
12 Discrete Student's Distribution	273
<i>References</i>	276

11

Multivariate Discrete Distributions	281
1 Introduction	281

CONTENTS

2	Multinomial Distribution	281
2.1	Genesis and Definition	281
2.2	Properties	281
2.3	Moments	284
2.4	Approximations	285
2.5	Estimation of Parameters	288
2.6	Applications of the Multinomial Distribution	290
2.7	'Truncated' Multinomial Distributions	291
3	Negative Multinomial (Multivariate Negative Binomial)	292
3.1	Definition	292
3.2	Genesis and Historical Remarks	293
3.3	Properties	294
3.4	Moments and Cumulants	295
3.5	Estimation	296
4	Multivariate Poisson Distributions	297
5	Multivariate Hypergeometric Distribution	300
6	Multivariate Logarithmic Series Distribution	302
7	Bivariate Neyman Type A Distributions	306
8	Compound Multinomial and Negative Multinomial Distributions	308
8.1	Dirichlet (β -) Compound Multinomial Distribution	308
8.2	Dirichlet (β -) Compound Negative Multinomial Distribution	311
9	Multivariate Multinomial Distributions	312
10	Multivariate Negative Multinomial Distribution	314
11	Tallis' 'Generalized Multinomial Distribution'	314
12	Series Expansions	315
	<i>References</i>	319
	Acknowledgements	325
	Index	327
