Friedrich Haslinger

The $\bar{\partial}$-Neumann Problem and Schrödinger Operators

DE GRUYTER

Contents

Preface — vii

1 **Bergman spaces — 1**
1.1 Elementary properties — 1
1.2 Examples — 8
1.3 Biholomorphic maps — 12
1.4 Notes — 15

2 **The canonical solution operator to $\bar{\partial}$ — 16**
2.1 Compact operators on Hilbert spaces — 16
2.2 The canonical solution operator to $\bar{\partial}$ restricted to $A^2(\mathbb{D})$ — 26
2.3 Notes — 35

3 **Spectral properties of the canonical solution operator to $\bar{\partial}$ — 36**
3.1 Complex differential forms — 36
3.2 $(0,1)$-forms with holomorphic coefficients — 37
3.3 Compactness and Schatten class membership — 39
3.4 Notes — 49

4 **The $\bar{\partial}$-complex — 50**
4.1 Unbounded operators on Hilbert spaces — 50
4.2 Distributions — 65
4.3 A finite-dimensional analog — 71
4.4 The $\bar{\partial}$-Neumann operator — 72
4.5 Notes — 86

5 **Density of smooth forms — 87**
5.1 Friedrichs' Lemma and Sobolev spaces — 87
5.2 Density in the graph norm — 98
5.3 Notes — 103

6 **The weighted $\bar{\partial}$-complex — 104**
6.1 The $\bar{\partial}$-Neumann operator on $(0,1)$-forms — 104
6.2 $(0,q)$-forms — 109
6.3 Notes — 112

7 **The twisted $\bar{\partial}$-complex — 114**
7.1 An exact sequence of unbounded operators — 114
7.2 The twisted basic estimates — 115
7.3 Notes — 118

8 Applications — 119
8.1 Hörmander's L^2-estimates — 119
8.2 Weighted spaces of entire functions — 122
8.3 Notes — 126

9 Spectral analysis — 127
9.1 Resolutions of the identity — 127
9.2 Spectral decomposition of bounded normal operators — 130
9.3 Spectral decomposition of unbounded self-adjoint operators — 136
9.4 Determination of the spectrum — 150
9.5 Variational characterization of the discrete spectrum — 160
9.6 Notes — 165

10 Schrödinger operators and Witten–Laplacians — 166
10.1 Difference quotients — 166
10.2 Interior regularity — 168
10.3 Schrödinger operators with magnetic field — 171
10.4 Witten–Laplacians — 178
10.5 Dirac and Pauli operators — 180
10.6 Notes — 182

11 Compactness — 183
11.1 Precompact sets in L^2-spaces — 183
11.2 Sobolev spaces and Gårding's inequality — 186
11.3 Compactness in weighted spaces — 190
11.4 Bounded pseudoconvex domains — 202
11.5 Notes — 205

12 The $\bar{\partial}$-Neumann operator and the Bergman projection — 207
12.1 The Stone–Weierstraß Theorem — 207
12.2 Commutators of the Bergman projection — 210
12.3 Notes — 215

13 Compact resolvents — 216
13.1 Schrödinger operators — 216
13.2 Dirac and Pauli operators — 218
13.3 Notes — 220

14 Spectrum of $\Box$ on the Fock space — 221
14.1 The general setting — 221
14.2 Determination of the spectrum — 223
14.3 Notes — 228

15 Obstructions to compactness — 229
15.1 The bidisc — **229**
15.2 Weighted spaces — **230**
15.3 Notes — **234**

Bibliography — **235**

Index — **239**
