

ELEMENTS OF LINEAR PROGRAMMING WITH ECONOMIC APPLICATIONS

R. C. GEARY

Consultant, The Economic Research Institute, Dublin

and

J. E. SPENCER

*Professor of Economics
The New University of Ulster*

BEING NUMBER FIFTEEN OF
GRIFFIN'S STATISTICAL
MONOGRAPHS & COURSES

EDITED BY
ALAN STUART, D.Sc.(ECON.)

GRIFFIN

LONDON

TECHNISCHE HOCHSCHULE DARMSTADT
Fachbereich 7
Gesamtbibliothek
Betriebswirtschaftslehre

CONTENTS

	<i>Page</i>
Foreword	5
 PART 1 – THEORY	
1 Elementary treatment	10
2 The Simplex solution of Example (a)	16
3 Statement of the general problem	27
4 Two propositions	28
5 The Simplex solution in general	35
6 The arithmetic of the Simplex	42
7 Marginal aspects	45
8 The Simplex and the Dual property in economics	51
9 Some notes	55
 PART 2 – APPLICATIONS	
Example I: Transportation	66
Example II: Industrial firm	74
Example III: An inter-industry problem	76
Example IV: An agricultural problem	87
Example V: Input-output	92
 APPENDICES	
A: The discrete variable in linear programming	99
B: An adaptation of the Simplex to non-linear programming	113
C: The final $a - c$ in the Primal and the solution of the Dual	131
