CRC Press, Inc.
Boca Raton, Florida**

Contents

1	Perspective and overview	1
	M.G. DREXHAGE	
1.1	Introduction	1
1.2	Optical fibre fundamentals	2
1.3	Loss mechanisms in optical fibre materials	4
1.3.1	Power losses and units	4
1.3.2	Extrinsic and intrinsic loss mechanisms	5
1.3.3	Intrinsic transparency: mechanisms and models	6
1.4	Long wavelength fibre materials	9
1.4.1	Materials, choices and sources of information	9
1.4.2	Silica-based fibres	11
1.4.3	Crystalline fibre materials	13
1.4.4	Chalcogenide glasses	15
1.4.5	Hollow infrared waveguides	16
1.5	Fluoride glasses and optical fibres	16
1.5.1	Concepts, definitions and materials	16
1.5.2	Fluoride fibre technology: a brief personal history	20
1.6	Applications for infrared optical fibres	25
1.7	Future prospects	27
	References	29
2	Properties of fluoride glasses	32
	J.M. PARKER and P.W. FRANCE	
2.1	Introduction	32
2.2	Glass-forming systems, structure and crystallization	32
2.2.1	Structural models	32
2.2.2	Crystallization behaviour	36
2.3	Thermal properties	42
2.3.1	Viscosity	42
2.3.2	Thermal expansion behaviour	45
2.3.3	Diffusion	48
2.3.4	Thermal conductivity	48
2.3.5	Heat transfer	49
2.4	Other properties	51
2.4.1	Density	51
2.4.2	Gas solubility	52
2.4.3	Elastic moduli	53
2.4.4	Microhardness	54
2.5	Optical properties	54
2.5.1	Infrared absorption	54
2.5.2	Ultraviolet absorption	61
2.5.3	Intrinsic scattering loss	62
2.5.4	Minimum intrinsic losses	64
2.5.5	Refractive index and dispersion	66
2.5.6	Fluorescence	69
	References	70

3	Propagation in optical fibres	75
	J.V. WRIGHT	
3.1	Introduction	75
3.2	Multimode fibres	76
3.2.1	Propagation in multimode fibres	76
3.2.2	Attenuation	83
3.2.3	Real fibres and fibre links	83
3.3	Monomode fibres	85
3.3.1	Propagation in monomode fibres	85
3.3.2	Optimized fibre design	94
3.3.3	Non-linear effects	97
	References	98
4	Manufacture of infrared fibres	100
	P.W. FRANCE	
4.1	Materials preparation	100
4.1.1	Introduction	100
4.1.2	Synthetic routes	101
4.1.3	Purification	103
4.2	Melting techniques	105
4.2.1	Melting environments	105
4.2.2	Containment vessels	105
4.2.3	Reactive atmosphere processing	106
4.2.4	Homogenization and fining	107
4.2.5	Crystallization	107
4.3	Fibre fabrication	108
4.3.1	Glass compositions	108
4.3.2	Glass melting	109
4.3.3	Preform fabrication	113
4.3.4	Fibre drawing	114
4.3.5	Other techniques	116
4.3.6	Monomode fibre	117
4.4	Problems	118
4.5	Fibre results	120
	References	121
5	Intrinsic loss measurements	122
	P.W. FRANCE	
5.1	Introduction	122
5.2	Rayleigh scattering	122
5.3	IR multiphonon edge	124
5.4	Minimum intrinsic loss	126
5.5	Longer wavelength transmitting fibres	127
	References	130
6	Extrinsic absorption	132
	P.W. FRANCE	
6.1	Introduction	132
6.2	Spectrometer measurements	133
6.2.1	Nomenclature	133
6.2.2	Experimental	134

6.3	Absorption due to water	136
6.3.1	OH ⁻ in oxide glasses	136
6.3.2	OH ⁻ in fluoride glasses	138
6.3.3	OH ⁻ in ZrF ₄ IR fibres	140
6.4	Absorption due to transition metal ions	143
6.4.1	Introduction	143
6.4.2	Oxidation-reduction equilibrium	144
6.4.3	Ligand field theory	145
6.4.4	Absorption spectra	147
6.4.5	Discussion	157
6.5	Absorption due to rare earth ions	159
6.5.1	Introduction	159
6.5.2	Oxidation states	159
6.5.3	Electronic spectra	160
6.5.4	Absorption spectra	162
6.5.5	Discussion	179
6.6	Other impurities	184
6.6.1	Dissolved gases	184
6.6.2	Molecular ions	182
6.6.3	Reduced species	182
6.6.4	Oxide absorption	182

7 Extrinsic scattering 186

P.W. FRANCE

7.1	Introduction	186
7.2	Identification of scattering centres	187
7.2.1	Large crystals	187
7.2.2	Gas bubbles	187
7.2.3	Sub-micron centres	188
7.2.4	Deviations of fibre geometry	188
7.3	Scattering theory	188
7.4	Scattering solutions for limiting cases	189
7.4.1	Small spheres, intermediate index (Rayleigh scattering)	189
7.4.2	Small high index spheres	190
7.4.3	Intermediate size spheres with m close to 1 (Rayleigh-Gans)	191
7.4.4	Intermediate size sphere with higher refractive index	191
7.4.5	High index (conducting) spheres of small size	193
7.4.6	High index spheres of intermediate size	194
7.4.7	Large spheres with index close to 1	194
7.4.8	Large spheres with high refractive index	194
7.5	Solutions for metallic (absorbing) spheres	195
7.6	Applications to practical examples	197
7.7	Calculations of scattering loss	199
7.8	Scattering loss in fibres	202
7.9	Conclusions	203
	References	204

8 Measured losses in fibres 205

M.W. MOORE

8.1	Introduction	205
8.2	Available techniques	206
8.2.1	Sources and detectors	206
8.2.2	Total loss	207
8.2.3	Absorption	207
8.2.4	Scattering	208

8.3	Total loss	208
8.4	Absorption	210
8.5	Scattering	211
8.6	Recent results	212
8.7	Predicted minimum loss	216
	References	217

9 Mechanical properties 219

S.F. CARTER

9.1	Introduction	219
9.2	Fracture and glass parameters	219
9.3	Strength measuring methods	221
9.3.1	What is strength?	221
9.3.2	Tensile measurements	222
9.3.3	Bend measurements	223
9.4	Fibre strengths	224
9.4.1	Mechanical polishing	224
9.4.2	Chemical polishing	224
9.5	Identification of flaws and effect on strength	227
9.6	Ultimate strength and maximum practical strength	230
9.7	Strength and homogeneous crystal growth	231
9.8	Durability	232
9.8.1	Zero stress aging	232
9.8.2	Dynamic fatigue	233
9.8.3	Hermetic coatings	235
9.9	Conclusions	236
	References	236

10 Applications 238

P.W. FRANCE

10.1	Mid-IR communication systems	238
10.1.1	System demonstrations	239
10.2	Active fibres	240
10.2.1	Fibre devices	241
10.2.2	Absorption and fluorescence spectra	243
10.2.3	Fluoride fibre lasers	247
10.2.4	Upconversion	251
10.3	Laser surgery	251
10.4	Infrared fibre sensors	253
10.4.1	IR fibre chemical sensors	255
10.4.2	IR fibre non-chemical sensors	259
	References	263
