Contents

Preface xiii

CHAPTER 1
Overview 1
Plan of the Book 2
Nature and Nurture 3
Interactionism and Individual Differences 5
Genes and Behavior 6
Do Genes Determine One's Destiny? 8
“What Is” versus “What Could Be” 9
Individual Differences and Equality 9
Summary 11

CHAPTER 2
Historical Perspective 13
The Era of Darwin 14
Galton’s Contributions 22
Hereditary Genius 23
Pioneering Research in Psychology and Statistics 25
Twins and the Nature–Nurture Problem 25
Galton’s Work in Perspective 28
Pre-Mendelian Concepts of Heredity and Variation 29
Heredity 29
Variation 30
# CHAPTER 5

## Chromosomes

- Mendel and Chromosomes 106
- Cell Division 107
  - Mitosis 109
  - Meiosis 110
- Crossing Over 110
- Linkage: Mapping Genes 113
- Human Chromosomes 118
  - Karyotypes 118
  - Banding 119
- Chromosomal Abnormalities 122
- Sex Chromosomes and the Lyon Hypothesis 125
- Chromosomes and Genetic Variability 126
- Summary 126

# CHAPTER 6

## Chromosomal Abnormalities and Human Behavior

- Down's Syndrome 130
  - Translocation Down's Syndrome 133
  - Relation to Maternal Age 134
- Turner's Syndrome (XO) 136
- Females with Extra X Chromosomes 139
- Klinefelter's Syndrome 141
- Males with Extra Y Chromosomes 143
- Fragile X as a Marker for Retardation 146
- Summary 149

# CHAPTER 7

## The New Genetics

- Eukaryotic Complexities 152
- Recombinant DNA Techniques 153
  - Restriction Enzymes 153
  - Recombinant DNA and Cloning 154
  - Genetic Probes 160
  - Restriction Map and Chromosome Walking 162
  - Restriction Fragment-Length Polymorphisms and Variable Number Tandem Repeats 162
- Linkage Analysis 165
  - The Human Gene Map and DNA Sequencing 168
- Molecular Genetics and Behavioral Genetics 169
  - Linkage Analysis for Complex Traits 170
  - Association 171
- Summary 173
CHAPTER 8

Population Genetics

Allelic and Genotypic Frequencies 175
Hardy–Weinberg–Castle Equilibrium 177
  Uses of the Hardy–Weinberg–Castle Equilibrium 178
  Tasting PTC 179
Forces That Change Allelic Frequency 181
  Migration 181
  Random Genetic Drift 182
  Mutation 183
  Selection 183
Stabilizing Selection and Balanced Polymorphisms 188
  Heterozygote Advantage 188
  Environmental Diversity 189
  Frequency-Dependent Selection 189
  Frequency-Dependent Sexual Selection 189
Forces That Change Genotypic Frequencies 193
  Inbreeding 193
  Assortative Mating 196
Genetic Variability 198
Sociobiology 199
  Between-Species Examples of Sociobiology 200
  Sociobiology and Genetic Differences Within Species 202
  Sociobiology and Behavioral Genetics 204
Summary 206

CHAPTER 9

Quantitative Genetic Theory

Brief Overview of Statistics 209
  Statistics Describing Distributions 209
  Statistics Describing the Relationship Between Two Variables 211
Historical Note 217
The Single-Gene Model 218
  Genotypic Value 219
  Additive Genetic Value 219
  Dominance Deviation 220
The Polygenic Model 221
  Epistatic Interaction Deviation 222
  Variance 222
  An Example of the Polygenic Model 224
Covariance of Relatives 226
  Covariance 227
  Shared and Independent Influences 228
  Genotype–Environment Correlation and Interaction 229
  Genetic Covariance Among Relatives 230
Heritability 231
  What Heritability Is Not 232
  What Heritability Is 233
  Path Analysis 234
  Multivariate Analysis 235

Resemblance of Relatives Revisited 238
  Univariate Analysis 238
  Multivariate Analysis 240

Model Fitting 240
Quantitative Genetics as a Theory of Individual Differences 246
Summary 252

CHAPTER 10
Quantitative Genetic Methods: Animal Behavior 255

Family Studies 256
  Open-Field Behavior in Mice 259
  Multivariate Analyses 260

Strain Studies 262
  Genetic Effects on Learning 265
  Environmental Effects on Behavior 268
  Classical Analysis 275
  Diallel Design 277

Selective Breeding Studies 278
  Dogs 278
  Heritability 280
  Maze Running in Rats 282
  Open-Field Behavior 287
  Other Behavioral Selection Studies 292

Summary 294

CHAPTER 11
Family Studies of Human Behavior 297

Components of Covariance in Family Studies 298
Intelligence Quotient (IQ) 299
Schizophrenia 303
Summary 307

CHAPTER 12
Twin Studies 309

Zygosity Determination 313
Equal Environments Assumption 315
Representativeness 319
Heritability 320
Contents

Environmentality 323
Other Twin Designs 325
  Families of Identical Twins 325
  Identical Co-twin Control Studies 327
  Studies of Genetic Similarity Within Pairs of Fraternal Twins 328
Twin Studies and Behavior 328
  Intelligence Quotient (IQ) 329
  Schizophrenia 334
Summary 339

CHAPTER 13
Adoption Studies 341

Issues in Adoption Studies 343
  Representativeness 344
  Selective Placement 344
  Other Issues 346
Heritability and Environmentality 346
Intelligence Quotient (IQ) 349
Schizophrenia 354
Summary 360

CHAPTER 14
Human Behavioral Genetics Research 361

Cognitive Abilities 362
  Intelligence Quotient (IQ) 362
  Specific Cognitive Abilities 368
  Academic Performance 371
  Reading Disability 372
  Mental Retardation 373
  Dementias 375
Psychopathology 376
  Schizophrenia 376
  Affective Disorders 377
  Other Psychopathology 379
  Delinquent and Criminal Behavior 380
  Alcoholism 381
Personality 383
  Extraversion and Neuroticism 383
  EAS Traits 384
  Other Personality Traits 385
  Attitudes and Beliefs 386
  Vocational Interests 387
  Observational Data 387
Environmental Analyses 388
  Nonshared Environmental Influence 388
  The Nature of Nurture 389
Contents

Review of Human Behavioral Genetics Research 392
Directions in Behavioral Genetics 396
Science and Politics 397
Summary 401

References 403

Index of Names 437

Index of Topics 449
