Contents

Preface	xiii
Introduction. Different Models For Different Decisions	1
Overview	1
1. Form-Fit or Ready-Made?	2
2. From Specific and Descriptive (Graunt) to General and	
Predictive (Bernoulli)	3
3. Selection of Appropriate Underlying Process: Bernoulli Trials,	
Poisson Process	5
4. Nature of Statistics, Definition	9
5. Problem-Oriented Exposition of Statistical Reasoning	11
Part I. Events and Relations: Alternative Views	
Chapter 1. Types of Causality, Set-Theoretic and Topological Notions	19
Overview	19
1. Indicators, Direct and Indirect	20
2. Four Types of Causality: Indirect, Teleological, Mechanical-	
Deterministic, and Mechanical-Probabilistic	22
3. Implications of Different Types of Causality for Decision-Making	25
4. Connective Statements: Language and Logic	27
5. Notion of Neighborhood	31
6 Concept of Limit	12

6. Concept of Limit	42
7. Neighborhood and Limit	48
hapter 2. Types of Probability and Measure-Theoretic Notions	51
Overview	51
1. Probability and the Mathematical Way of Thinking	53
2. Probability: Relative Frequency Concept	54
3. Probability: Logical Relation Concept	58
4. Probability: Subjective Concepts	59
5. Probability Function for Theoretical Interpretation	61
6. Probability Function	65
7. Measure-Theoretic Notions of Probability	70
8. Conditional Probability, Bayes' Theorem	71

Part II. Events and Relations: Linear Representation

Chapter 3. Specification of Relations: Function, Transformation,	
Linear Function	77
Overview	77
1. Alternative Specifications of Relations	77
2. Notion of a Function	78
3. Linear Function, Transformation	81
Chapter 4. Measurement of "Pairwise Togetherness": Simple Regression,	
Least Squares Fit	85
Overview	85
1. Real-Life Data and Alternative Associations	86
2. Data Collection	87
3. Linear Function in Age and Height	91
4. Rule of Mapping	95
5. Method of Least Squares	101
6. Interpretation of Regression Fit	111
Chapter 5. Measurement of Sample Characteristics: Mean, Variance.	
Standard Deviation. Standard Error of Estimate	115
Overview	115
1. Moments about the Sample Mean	119
2. Sample and Population Variance	126
3. Degrees of Freedom	128
4. Sample Characteristics	135
Problems	135
Chapter 6 Massurement of "Croupwise Togetherness".	
Product Moment Correlation	127
	137
1 Correlation Coofficient	137
2. Correlation and Pagrassion	130
	140
Problems	162
	102
Chapter 7. Application of Regression: Time-Series Analysis -	
Straight-Line Fit	165
Overview	165
1. Logic of Time Series Analysis	166
2. Time Series Analysis of Deficit Spending: Four Alternative Approaches .	168
3. Regression Equation Fit to U.S. Expenditures (Y) and Receipts (X)	173
4. Straight-Line Fits: Arbitrary Origin, $\sum_{1}^{n} X = 0$	177
5. Analysis of U.S. Deficit Spending: Regression Analysis vs.	
Time Series Analysis	182

.

÷ - - ..

.

Part III: Events and Relations: Nonlinear Representation

Chapter 8. Specification of Events: Nonlinear Functions,	
Method of Moments	191
Overview	191
1. Empirical Data for Curve Fitting	193
2. Method of Moments	198
Chapter 9. Measurement of Pearsonian Parameters for Coin Toss Data	213
Overview	213
1. Parameters for Type I Curve	214
2. "Goodness of Fit" of Type I Curve	214
3. Weldon's Dice Data and χ^2 Test	214
4. χ^2 Distribution: Theoretical Distribution Assumptions	223
5. χ^2 Goodness of Fit of Type I Curve	225
Problem	226
Chapter 10. Measurement of Normal Parameters for Coin Toss Data,	
Normal Curve of Error	227
Overview	227
1. Normal Distribution Fit to Coin Toss Data	228
2. Application of Standardized Measures to Measurement of Intelligence	232
3. Normal Distribution Fit to Coin Toss Data:	
Direct Computation of Frequencies	233
4. Comparison of Normal Curve Frequencies-	
Using Normal Tables; by Direct Computation	237
5. Normal Curve of Error	237
6. Normal Distribution of Error of Age-Height Data	250
Examples	251
Problems	253
Chapter 11. Measurement of Binomial Parameters for Coin Toss Data	
Binomial Distribution	255
Overview	255
1. Binomial Distribution Fit to Coin Toss Data	256
2. Comparative Fits to Coin Toss Data: Pearsonian Normal	200
and Binomial Distributions	256
3 Random Allocation of 3 Balls into 3 Cells	259
4 Joint and Marginal Distributions	275
5 Binomial Distribution and Random Allocation of 3 Balls to 3 Cells	275
Problems	281
Part IV. Events and Relations: Underlying Processes	
	005
Chapter 12. Bernoulli Irials, Generating Functions	285
Overview	285

.

2. Generating Function 28 3. Generating Function of the Binomial Distribution 29 4. Multinomial Distribution 29 5. Hypergeometric Distribution 29 Chapter 13. Markov Chains, Transition Matrix 29 Overview 29 1. Markov-Dependent Bernoulli Trials 29 2. Transition Probability Matrix 29 3. Number of Preferences under Bernoulli Assumption 30 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30 Overview 30 1. Poisson Processes, Service Queues 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
3. Generating Function of the Binomial Distribution 29 4. Multinomial Distribution 29 5. Hypergeometric Distribution 29 Chapter 13. Markov Chains, Transition Matrix 29 Overview 29 1. Markov-Dependent Bernoulli Trials 29 2. Transition Probability Matrix 29 3. Number of Preferences under Bernoulli Assumption 30 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30 Chapter 14. Poisson Processes, Service Queues 30 Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
4. Multinomial Distribution 294 5. Hypergeometric Distribution 294 6. Hypergeometric Distribution 294 7. Hypergeometric Distribution 294 9. Overview 294 9. Markov-Dependent Bernoulli Trials 297 9. Markov-Dependent Bernoulli Trials 297 9. Number of Preferences under Bernoulli Assumption 306 9. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 306 9. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 306 9. Chapter 14. Poisson Processes, Service Queues 307 9. Overview 307 9. Poisson Process 307 9. Poisson Approximation to Binomial 316 9. Generating Function and Moments of Poisson and Binomial Distributions 317 9. Moments of Poisson Distribution 316 9. Moments of Poisson Distribution 317 9. Moments of Poisson Distribution 317 9. Moments of Poisson Distribution 316 9. Prochlems 317
4. Multinonial Distribution 22 5. Hypergeometric Distribution 29 Chapter 13. Markov Chains, Transition Matrix 29 Overview 29 1. Markov-Dependent Bernoulli Trials 29 2. Transition Probability Matrix 29 3. Number of Preferences under Bernoulli Assumption 30 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30 Chapter 14. Poisson Processes, Service Queues 30 Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 9. Problems 31
S. Hypergeometric Distribution 29 Chapter 13. Markov Chains, Transition Matrix 29 Overview 29 1. Markov-Dependent Bernoulli Trials 29 2. Transition Probability Matrix 29 3. Number of Preferences under Bernoulli Assumption 30 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30 6. Process 30 1. Poisson Processe 30 1. Poisson Process 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
Chapter 13. Markov Chains, Transition Matrix29Overview291. Markov-Dependent Bernoulli Trials292. Transition Probability Matrix293. Number of Preferences under Bernoulli Assumption304. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences306. Chapter 14. Poisson Processes, Service Queues307. Poisson Process309. Poisson Process309. Poisson Approximation to Binomial319. Generating Function and Moments of Poisson and Binomial Distributions319. Moments of Poisson Distribution319. Moments of Poisson Di
Overview29'1. Markov-Dependent Bernoulli Trials29'2. Transition Probability Matrix29'3. Number of Preferences under Bernoulli Assumption30'4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences30'Chapter 14. Poisson Processes, Service Queues30'Overview30'1. Poisson Process30'2. Poisson Approximation to Binomial31'3. Generating Function and Moments of Poisson and Binomial Distributions31'4. Moments of Binomial Distribution31'5. Moments of Poisson Distribution31'6. Practical Applications of Poisson Distribution313. Problems31'
1. Markov-Dependent Bernoulli Trials 29' 2. Transition Probability Matrix 29' 3. Number of Preferences under Bernoulli Assumption 30' 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30' Chapter 14. Poisson Processes, Service Queues 30' Overview 30' 1. Poisson Process 30' 2. Poisson Approximation to Binomial 31' 3. Generating Function and Moments of Poisson and Binomial Distributions 31' 5. Moments of Binomial Distribution 31' 6. Practical Applications of Poisson Distribution 31 9. Problems 31
2. Transition Probability Matrix 294 3. Number of Preferences under Bernoulli Assumption 300 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 300 Chapter 14. Poisson Processes, Service Queues 300 Overview 300 1. Poisson Process 300 2. Poisson Approximation to Binomial 310 3. Generating Function and Moments of Poisson and Binomial Distributions 311 5. Moments of Binomial Distribution 311 6. Practical Applications of Poisson Distribution 311 7. Problems 311
2. Haishing Housing Matrix 2.4 3. Number of Preferences under Bernoulli Assumption 30 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30 Chapter 14. Poisson Processes, Service Queues 30 Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 30 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
3. Number of Preferences under Bernoulli Assumption 30. 4. Markov Chain vs. Bernoulli Trial Outcome of Brand Preferences 30. Chapter 14. Poisson Processes, Service Queues 30. Overview 30. 1. Poisson Process 30. 2. Poisson Approximation to Binomial 30. 3. Generating Function and Moments of Poisson and Binomial Distributions 31. 4. Moments of Binomial Distribution 31. 5. Moments of Poisson Distribution 31. 6. Practical Applications of Poisson Distribution 31. 7. Problems 31.
4. Markov Chain Vs. Bernoulli Trial Outcome of Brand Preferences 30 Chapter 14. Poisson Processes, Service Queues 30 Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 30 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
Chapter 14. Poisson Processes, Service Queues 30 Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
Overview 30 1. Poisson Process 30 2. Poisson Approximation to Binomial 30 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
1. Poisson Process 30 2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
2. Poisson Approximation to Binomial 31 3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 7. Problems 31
3. Generating Function and Moments of Poisson and Binomial Distributions 31 4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 9. Problems 31
4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 9. Problems 31
4. Moments of Binomial Distribution 31 5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 Problems 31
5. Moments of Poisson Distribution 31 6. Practical Applications of Poisson Distribution 31 Problems 31
6. Practical Applications of Poisson Distribution
Problems 31
Chapter 15 Stochastic Processes Absorbing Barriers 32
Overview 22
Uverview 1. Detection 1.04 electric Discourse Energy in 1. Energy 1.2 22
1. Deterministic and Stochastic Processes: Empirical Examples
2. Stochastic Processes and Specification of Occurrences
3. Markov Chains, Poisson Process as Stochastic Processes
4. Random Walk and the Associated Queuing Process

Part V. Decisions and Consequences: Experimental and Physical

Chapter 16. Type I and Type II Errors	343
Overview	343
1. Nuclear Warfare: To Launch or Not To Launch?	344
2. Two Types of Errors	347
3. Consequences of Decisions: Physical vs. Experimental	347
4. Different Consequences of Type I and Type II Errors	350
5. The Error Basis of the Kangaroo and Nonkangaroo Legal Systems	350
Chapter 17. Neyman-Pearson Power Function and Wald's Decision Function	357
Óverview	357
1. A Test of No Value	358
2. A Test Independent of the Probability Law <i>a priori</i>	360
3. Power of a Test	361

ł

 $\left| \right|$

-

-

1

4. Uniformly Most Powerful Test	365
5. Regions of Acceptance and Rejection when $\mu = \mu_0$,	
and when $\mu = \mu_1 \neq \mu_0$	367
6. Wald's Decision Function and Neyman-Pearson Theory	373

Part VI. Decisions and Consequences: Inference and Implications

Chapter 18. Point Estimation, Interval Estimation	379 379
1. Potful of Decisions	380
2. Estimation and Inference	380
3. Null Hypothesis	388
Chapter 19. t-Distribution	389
Overview	389
1. Null Hypothesis: $E(X)_{I} = E(X)_{II}$	390
2. Student's <i>t</i> -Distribution	392
3. t-Distribution and Normal Distribution	393
4. Levels of Significance	393
5. t Values for $E(X)_1, E(X)_{11}$	394
6. Identical Numbers, but Different Column Headings	395
7. Other Uses of t Statistics	402
Chapter 20. Interval Estimation, Confidence Intervals	409
Overview	409
1. From a General Exclusion to a Specific Inclusion	409
2. Interval Estimation	411

.

Part VII. Decisions and Consequences: Randomness and Risks

Chapter 21. Formal and Empirical Testing of Hypothesis I	
Test of Randomness Assumption, Shewhart Cycle of Control	
of Product Quality	419
Overview	419
1. Assumption of Randomness	420
2. Shewhart's Ideal Bowl, A Physical Random Experiment	421
3. Operation of Control	421
4. Empirical Determination of Randomness	424
5. Specification, Production, Inspection Cycle of Control	427
Chapter 22. Formal and Empirical Testing of Hypothesis II Acceptance	
Sampling, Operating Characteristic Curves	431
Overview	431
1. Distribution of Defectives in State of Statistical Control	431
2. Why Acceptance Sampling?	432

3. Producer's and Consumer's Risks	432
4. Acceptable Quality Level, Operation Characteristic Curve	434
5. Operation Characteristic Function and Power Function	435
6. Sequential Analysis and Sequential Probability Ratio Test	440
7. Control of (Product) Quality as an Adaptive Process	442
Problems	443
Conclusion. Better Decisions through Better Models	451
Overview	451
1. Better Mouse Traps, Better Decisions	451
2. Better "Guess" Methodology: Wald vs. Neyman-Pearson	452
3. Adaptive Control	454
4. Dynamic Programming, Operational Ordering of Policies	455
5. Stochastic Independence	456
6. Continuous Probability	457
7. Actions and Assumptions	457
Appendices	459
Table A. Common Logarithms of Numbers	461
Table B. Areas of the Standardized Normal Probability Distribution	463
Table C. Chi Square (X^2) Table \cdots	464
Index	467
Answers to Problems	473
