J.-F. Richard

Posterior and Predictive Densities for Simultaneous Equation Models

Springer-Verlag
Berlin · Heidelberg · New York 1973

Contents

I. The Simultaneous Equation Model. 1

I.1 The statistical model ; Notations. 1

I.2 The identification problem 3

I.3 Some previous contributions 8

I.4 Review of the contents 11

I.5 Technical abstract 13

II. Full Information Analysis of the Two-equation Model. 20

II.1 Notations. 20

II.2 The Drèze and Morales' approach. 23

II.3 An alternative approach : structural analysis 29

II.4 Reduced form analysis and prediction. 40

II.5 Some additional remarks 44

III. Limited Information Analysis of the Simultaneous Equation Model. 49

III.1 Some posterior joint conditional densities on Π : non-informative prior density 49

III.2 Posterior moments of the reduced form parameters : limited information prior density 59

III.2.1 Natural conjugate prior density (m_1=1). 60

III.2.2 Exact prior restrictions (m_1=1). 68

III.2.3 Some extensions for $m_1 > 1$ 76

III.3 A "limited information" prediction. 81

Appendix I : The matrix-t density 85

Appendix II : The row-diagonal conditional matricvariate-t density 89

Appendix III : The technicalities of Chapter II 93

Appendix IV : Hypergeometric series ; Their computations 118

Appendix V : The programs of Chapter II. 141

Appendix VI : An integral identity (Dickey) 147

IV. Empirical Illustration : The Belgian Beef Market. 152

IV.1 Morales' model. 152

IV.2 The information content of the identifying restrictions. 154

IV.3 Informative approach : full information analysis. 166

IV.4 Informative approach : limited information analysis. 187

V. Conclusions 196

Appendix VII : The data. 201

Appendix VIII : The results 203
