CONTENTS

	Page
1. <u>Introduction</u>	3
2. <u>Review of the relevant literature to the subject of this publication</u>	8
3. <u>S-shaped growth curves</u>	18
3.1 Properties of the logistic function	18
3.2 Other S-shaped growth curves	24
3.2.1 The Pyatt function	24
3.2.2 The Gompertz - function	25
3.2.3 The Weblus model	27
3.2.4 The loginverse function	28
3.2.5 The lognormal function	29
3.2.6 Generalized logistic functions	30
3.3 Reasons for S-shaped curves	36
4. <u>Analysis of the diffusion process</u>	39
4.1 The diffusion of information	40
4.2 The adoption process	46
4.3 Possibilities of model building	52
5. <u>A stochastic formulation for the description of the market penetration process</u>	64
5.1 Definitions	64
5.2 Comparison of different stochastic formulations	67
5.3 A nonstationary Markovian process for the description of the struggle "OLD" against "NEW"	72
5.4 Estimation of the parameters and test of goodness of fit	89

5.5 Applications	93
5.5.1 Substitution of steam ships for sailing ships in the US	93
5.5.2 The spreading of television in the Federal Republic of Germany	97
5.5.3 The adoption of "modern math" in the US	101
6. <u>Extension of the stochastic formulation for the description of more complex market penetration processes</u>	105
6.1 General formulation	105
6.2 Applications	108
6.2.1 Development of the heating structure of one and multiple-family houses with stove heating in the FRG	108
6.2.1.1 Decrease of coal in the case of stove heating	113
6.2.2 Development of the heating structure of one and multiple-family houses with central heating in the FRG	116
6.2.2.1 Development before 1970	116
6.2.2.2 Development from 1970 onwards	121
6.2.2.3 Decline of coal and oil in the case of central heating	125
7. <u>Logistic course of market penetration processes as a consequence of individual adoption decisions</u>	128
8. <u>Microscopic interpretation of the consumer behaviour in the macroscopic model of Peterka</u>	139
8.1 The macro model of Peterka	139
8.2 Interpretation of the consumer behaviour assumed in the macro model from a microscopic perspective	143
9. <u>Summary</u>	152
