CONTENTS

PREFACE v

CONTENTS vii

I. A MODEL FOR ENERGY EFFECTS IN ALLOYS

1. Successive steps in the formulation of the model . . 1

2. The proportionality constants of the model: P, Q and R^* . 5

3. Extensions of the model 8

References 12

II. FUNDAMENTALS OF THE MODEL

1. Introduction 13
   - *1.1. Types of cohesion* 13
   - *1.2. The «macroscopic atom» picture* 17
   - *1.3. The solubility parameter of Hildebrand* . . . 20
   - *1.4. Heat effects on alloy formation* 25
   - *1.5. Earlier, related treatments of the enthalpy of formation* 36

2. Numerical evaluation of the enthalpy of formation . . 38
   - *2.1. The concentration dependence* 39
   - *2.2. Molar volumes and the volume corrections* . . 44
   - *2.3. Alloys of two transition metals* 45
   - *2.4. Alloys with the monovalent alkaline metals* . . 52
   - *2.5. Alloys of two polyvalent non-transition metals* . . 56

2.6. Alloys of transition metals with non-transition metals . 62
The additional enthalpy contribution . . . 62
Parameterization of the additional enthalpy term . 65
2.7. A computer program for the enthalpy of alloy formation 72

3. Extensions of the model 74
3.1. Concluding remarks 74
3.2. Solid solutions 76

4. Other models to predict enthalpies of alloy formation . 84

III. EXPERIMENTAL AND PREDICTED ENTHALPIES OF ALLOY FORMATION

Introduction 95

1. Scandium 103
*1.1. Table **Sc** - I, Properties of the pure metal* . . 105
*1.2. **Scandium**-based binary phase diagrams* . . . 106
*1.3. Table **Sc** - II, Predictions for ordered intermetallics* 110
*1.4. Table **Sc** - III, Experimental values for intermetallics* 112
*1.5. Table **Sc** - IV, Predicted values for liquid alloys* 114
*1.6. Table **Sc** - V, Experimental values for liquid alloys* 115
References 116

2. Titanium 119
*2.1. Table **Ti** - I, Properties of the pure metal* . . 121
*2.2. **Titanium**-based binary phase diagrams* . . . 122
*2.3. Table **Ti** - II, Predictions for ordered intermetallics* 126
*2.4. Table **Ti** - III, Experimental values for intermetallics* 128
*2.5. Table **Ti** - IV, Predicted values for liquid alloys* 133
*2.6. Table **Ti** - V, Experimental values for liquid alloys* 134
References 137

3. Vanadium 143
*3.1. Table **V** - I, Properties of the pure metal* . . 145
*3.2. **Vanadium**-based binary phase diagrams* . . . 146
*3.3. Table **V** - II, Predictions for ordered intermetallics* 150

3.4. Table V - III, Experimental values for intermetallics 152
3.5. Table V - IV, Predicted values for liquid alloys 156
3.6. Table V - V, Experimental values for liquid alloys 157
References 159

4. Chromium 165
4.1. Table Cr - I, Properties of the pure metal . . 167
*4.2. **Chromium**-based binary phase diagrams* . . . 168
4.3. Table Cr - II, Predictions for ordered intermetallics 172
4.4. Table Cr - III, Experimental values for intermetallics 174
4.5. Table Cr - IV, Predicted values for liquid alloys 179
4.6. Table Cr - V, Experimental values for liquid alloys 180
References 183

5. Manganese 191
5.1. Table Mn - I, Properties of the pure metal . . 193
*5.2. **Manganese**-based binary phase diagrams* . . . 194
5.3. Table Mn - II, Predictions for ordered intermetallics 198
5.4. Table Mn - III, Experimental values for intermetallics 200
5.5. Table Mn - IV, Predicted values for liquid alloys 206
5.6. Table Mn - V, Experimental values for liquid alloys 207
References 211

6. Iron 217
6.1. Table Fe - I, Properties of the pure metal . . 219
*6.2. **Iron**-based binary phase diagrams* . . . 220
6.3. Table Fe - II, Predictions for ordered intermetallics 224
6.4. Table Fe - III, Experimental values for intermetallics 226
6.5. Table Fe - IV, Predicted values for liquid alloys 233
6.6. Table Fe - V, Experimental values for liquid alloys 234
References 246

7. Cobalt 259
7.1. Table Co - I, Properties of the pure metal . . 261
*7.2. **Cobalt**-based binary phase diagrams* . . . 262
7.3. Table Co - II, Predictions for ordered intermetallics 266
7.4. Table Co - III, Experimental values for intermetallics 268
7.5. Table Co - IV, Predicted values for liquid alloys 274
7.6. Table Co - V, Experimental values for liquid alloys 275
References 280

8. Nickel 291
*8.1. Table **Ni** - I, Properties of the pure metal* . . 293
*8.2. **Nickel**-based binary phase diagrams* . . . 294
*8.3. Table **Ni** - II, Predictions for ordered intermetallics* 298
*8.4. Table **Ni** - III, Experimental values for intermetallics* 300
*8.5. Table **Ni** - IV, Predicted values for liquid alloys* 312
*8.6. Table **Ni** - V, Experimental values for liquid alloys* 313
References 322

9. Yttrium 337
*9.1. Table **Y** - I, Properties of the pure metal* . . 339
*9.2. **Yttrium**-based binary phase diagrams* . . . 340
*9.3. Table **Y** - II, Predictions for ordered intermetallics* 344
*9.4. Table **Y** - III, Experimental values for intermetallics* 346
*9.5. Table **Y** - IV, Predicted values for liquid alloys* 351
*9.6. Table **Y** - V, Experimental values for liquid alloys* 352
References 354

10. Zirconium 359
*10.1. Table **Zr** - I, Properties of the pure metal* . . 361
*10.2. **Zirconium**-based binary phase diagrams* . . . 362
*10.3. Table **Zr** - II, Predictions for ordered intermetallics* 366
*10.4. Table **Zr** - III, Experimental values for intermetallics* 368
*10.5. Table **Zr** - IV, Predicted values for liquid alloys* 375
*10.6. Table **Zr** - V, Experimental values for liquid alloys* 376
References 378

11. Niobium 383
*11.1. Table **Nb** - I, Properties of the pure metal* . . 385
*11.2. **Niobium**-based binary phase diagrams* . . . 386
*11.3. Table **Nb** - II, Predictions for ordered intermetallics* 390
*11.4. Table **Nb** - III, Experimental values for intermetallics* 392
*11.5. Table **Nb** - IV, Predicted values for liquid alloys* 396
*11.6. Table **Nb** - V, Experimental values for liquid alloys* 397
References 399

12. Molybdenum 403
*12.1. Table **Mo** - I, Properties of the pure metal* . . 405
*12.2. **Molybdenum**-based binary phase diagrams* . . 406
*12.3. Table **Mo** - II, Predictions for ordered intermetallics* 410

*12.4. Table **Mo** - III, Experimental values for intermetallics* 412
*12.5. Table **Mo** - IV, Predicted values for liquid alloys* 419
*12.6. Table **Mo** - V, Experimental values for liquid alloys* 420
References 422

13. Technetium 427
*13.1. Table **Tc** - I, Properties of the pure metal* . . 429
*13.2. **Technetium**-based binary phase diagrams.* . . 430
*13.3. Table **Tc** - II, Predictions for ordered intermetallics* 434
*13.4. Table **Tc** - III, Experimental values for intermetallics* 436
*13.5. Table **Tc** - IV, Predicted values for liquid alloys* 437
*13.6. Table **Tc** - V, Experimental values for liquid alloys* 438
References 438

14. Ruthenium 439
*14.1. Table **Ru** - I, Properties of the pure metal* . . 441
*14.2. **Ruthenium**-based binary phase diagrams* . . . 442
*14.3. Table **Ru** - II, Predictions for ordered intermetallics* 446
*14.4. Table **Ru** - III, Experimental values for intermetallics* 448
*14.5. Table **Ru** - IV, Predicted values for liquid alloys* 450
*14.6. Table **Ru** - V, Experimental values for liquid alloys* 451
References 451

15. Rhodium 455
*15.1. Table **Rh** - I, Properties of the pure metal* . . 457
*15.2. **Rhodium**-based binary phase diagrams* . . . 458
*15.3. Table **Rh** - II, Predictions for ordered intermetallics* 462
*15.4. Table **Rh** - III, Experimental values for intermetallics* 464
*15.5. Table **Rh** - IV, Predicted values for liquid alloys* 468
*15.6. Table **Rh** - V, Experimental values for liquid alloys* 469
References 470

16. Palladium 471
*16.1. Table **Pd** - I, Properties of the pure metal* . . 473
*16.2. **Palladium**-based binary phase diagrams* . . . 474
*16.3. Table **Pd** - II, Predictions for ordered intermetallics* 478
*16.4. Table **Pd** - III, Experimental values for intermetallics* 480
*16.5. Table **Pd** - IV, Predicted values for liquid alloys* 485
*16.6. Table **Pd** - V, Experimental values for liquid alloys* 486

IV. FURTHER APPLICATIONS OF THE «MACROSCOPIC ATOM» MODEL

Introduction 639

1. Applications if the enthalpy of alloy formation is known . 640

1.1. Some chemical reactions 640
1.2. Stabilities of ternary compounds 644
1.3. Some rules for ternary hydrides 648
1.4. Interactions in ternary solid solutions . . . 651
1.5. Valence state of rare earth metals . . . 652
1.6. Photoemission core-level shifts in alloys . . . 654

2. Interfacial energies 655
2.1. Introduction to interfacial energies 655
2.2. Surface energy of pure metals 657
Free energy of surface-layer atoms 657
Enthalpy of vaporization of pure metals . . . 660
Dissociation energies of homonuclear metallic clusters . 667
Surface energy of solid metals at zero temperature . 672
2.3. Formation enthalpy for monovacancies in pure metals . 674

3. Applications if a value for the surface energy is known . 677
3.1. Adsorption of metals on metal substrates . . . 678
3.2. The valence state of adsorbed rare earth metals . . 680
3.3. Noble-gas atoms in and on metals 681
3.4. Surface segregation in dilute binary alloys. . . 684
3.5. Interfacial energies and interfacial segregation . . 686
Interfacial energy of a solid-liquid interface . . 686
Interfacial energy and adhesion of a solid-solid interface 689
Interfacial segregation 691

4. Applications of known values for
the enthalpy for forming monovacancies . 692
4.1. Monovacancies in intermetallic compounds . . 692
The minority sites 692
Vacancy formation at arbitrary concentration . . 693
4.2. Solute-vacancy interactions 695
4.3. Interstitial solubility and rapid diffusion in dilute alloys 696
4.4. Crystallization temperature of amorphous alloys . . 697

5. Consequences of the empirical model 700
5.1. Volume effects in alloys of two transition metals . . 701
5.2. Mössbauer isomer shift in alloys 703
5.3. Quantitative estimate of charge transfer . . . 706

References 707
