CONTENTS

Preface	v
Introduction	1
Part I Difference equations (linear and with constant coefficients)	
Chapter 1 General principles	7
Chapter 2 First-order equations	14
 Chapter 3 Some economic applications of first-order equations §1 The cobweb theorem §2 The dynamics of multipliers §3 A formalization of Harrod's model §4 A simple dynamic model of income inflation 	24 24 34 41 45
Chapter 4 Second-order equations	50
Chapter 5 Some economic applications of second-order equations §1 Samuelson's multiplier-accelerator model §2 Hicks' trade cycle model §3 Metzler's inventory cycle model §4 Expectations and cobweb theorem (Goodwin) -§5 Monetary factors and multiplier-accelerator interaction (Smyth)	63 63 73 85 91 97
Chapter 6 Higher-order equations	104
Chapter 7 Some economic applications of higher-order equations §1 Distributed lags and multiplier-accelerator interaction (Hicks) §2 Expectations and inventory cycles (Metzler)	111 111 115
Chapter 8 Simultaneous systems	121
 Chapter 9 Some economic applications of simultaneous systems §1 Multiplier effects in an open economy §2 Capital stock adjustment and extrapolative expectations §3 Smithies' model 	139 140 145 151

.

Part II Differential equations (linear and with constant coefficients)	
Chapter 1 General principles	163
Chapter 2 First-order equations	167
 Chapter 3 Some economic applications of first-order equations §1 Stability of supply and demand equilibrium §2 A re-formulation of the cobweb theorem §3 Domar's model §4 The neoclassical aggregate growth model (Solow) §5 Money and growth in the neoclassical aggregate model (Stein) 	175 175 183 187 191 200
Chapter 4 Second-order equations	210
 Chapter 5 Some economic applications of second-order equations §1 Phillips' stabilization model for a closed economy §2 A model of foreign exchange speculation under floating exchange rates 	219 219 227
Chapter 6 Higher-order equations	236
Chapter 7 Some economic applications of higher-order equations §1 Phillips' integral stabilization policy §2 Expectations and inventory adjustment	244 245 249
Chapter 8 Simultaneous systems	254
 Chapter 9 Some economic applications of simultaneous systems §1 Stability of Walrasian general equilibrium of exchange §2 Leontief's dynamic model §3 The stability of a barter international equilibrium (Marshall-Kemp) §4 A digression on 'arrow diagrams' §5 Flexible exchange rates and the level of national income (Laursen and Metzler) §6 Full employment and balance of payments equilibrium under fixed exchange rates: the 'assignment problem' 	273 274 286) 301 310 312 322
§7 A two-sector growth model (Shinkai)	331
Appendixes	
 Appendix I Comparative statics and the correspondence principle §1 Introduction- §2 The method of comparative statics §3 Comparative statics and maximizing behaviour: an example from traditional demand theory 	340 341 342 347

.

~

Cont	en	ts
------	----	----

§4 Comparative statics and the dynamic stability of equilibrium:	250
the 'correspondence principle'	350
s Extrema and dynamic stability: an application to the theory of	251
the firm	354
80 Elements of comparative dynamics	339
g / Some economic applications of the conespondence principle	260
7.2 The foreign trade multiplier under flowible exchange rates	264
7.2 The foreign trade multiplier under flexible excitatige fates	504
Appendix II The stability of equilibrium and Liapunov's	
'second method'	368
§1 The concept of stability	368
§2 Liapunov's 'second method': general concepts	369
§3 The fundamental theorems	371
§4 Some economic applications	375
4.1 Global stability of Walrasian general equilibrium (Arrow et al.)	375
4.2 Rules of thumb in business management (Baumol and Quandt)	384
Appendix III Other topics in differential and difference equations	387
§1 Introduction	387
§2 Exact equations of the first order and of the first degree	388
§3 Linear equations of the first order with variable coefficients	391
§4 The Bernouilli equation	394
§5 Elements of the qualitative theory of non-linear differential	
equations	395
5.1 Single equations	395
5.2 Systems of two simultaneous equations	400
5.3 The Lotka-Volterra equations	409
§6 Elements of the qualitative theory of non-linear difference	
equations	416
§7 Some economic applications	421
7.1 The neoclassical aggregate growth model again (Solow)	421
7.2 Embodied technical progress and 'vintage' models (Solow-	
Bergstrom)	425
7.3 A cyclical model by Goodwin	432
7.4 Goodwin's growth cycle	436
7.5 Uzawa's two-sector model of economic growth	442
7.6 A multi-sector extension of the neoclassical growth model	
and the 'Hahn problem' (Burmeister et al.)	456
Annendix IV Linear mixed differential difference equations	467
81 General concents	467
ST General concepts	107

ix

Contents[.]

§2 The method of solution and the stability conditions \$3 Some economic applications	469 475
3.1 Kalecki's (1935) model 3.2 A formalization of the classical price-specie-flow mechanism	476
of balance of payments adjustment	483
Bibliography	489
Author index	499
Subject index	503
