# Postponed manufacturing in European supply chains

A triangular approach

### Voorwoord/Preface 12

## 1 Introduction 15

- 1.1 Introduction to the area of study; a fourth global shift? 15
- 1.2 Defining the problem; micro focus with meso and employment impact 16
  - 1.2.1 Integrated network strategies 16
  - 1.2.2 Postponed manufacturing as a structure related to integrated network strategies 17
  - 1.2.3 Impact of postponed manufacturing 18
- 1.3 Definition of the problem 19
- 1.4 Objectives of the study 21
  - 1.4.1 Scientific objectives 21
  - 1.4.2 Public interest 23
  - 1.4.3 Managerial goals 24
- 1.5 Limitations of the study 25
- 1.6 The research process: triangulation 26
- 1.7 Key definitions 28
- 1.8 Design of the study 30
- 1.9 Conclusions 31

## 2 Managing international firms in a world of regions 33

- 2.1 Introduction 33
- 2.2 The lowering of time and space barriers 34
- 2.3 The further lowering of barriers through information technology 36
- 2.4 From mass marketing and mass production to mass customization 38
- 2.5 Towards multidimensional strategies: combining globalization and localization 39
- 2.6 Heritage and starting point as factors disrupting the general pattern 42
  - 2.6.1 Variation of drivers in time: general movement towards integrated network strategies 43
  - 2.6.2 Variation of drivers across industries 45
  - 2.6.3 The role of an organization's heritage 47
- 2.7 Conclusions 50

## 3 Postponed manufacturing 55

- 3.1 Introduction 55
- 3.2 Postponement versus speculation 55
  - 3.2.1 Postponed manufacturing defined 58
  - 3.2.2 Postponed manufacturing among related principles: CODP 63
  - 3.2.3 Postponed manufacturing among related principles: mass customization 66
- 3.3 The role of operating characteristics in assessing the viability of postponed manufacturing 69

3.3.1	Modular production	69
3.3.2	Other operating characteristics relevant in assessing the viability of postponed manufacturing	73
3.3.3	Other classifications based on operating characteristics	80
3.4	Geographical reconfiguration involved in the implementation of postponed manufacturing	83
3.4.1	Location selection factors in the context of internationalization strategy	85
3.4.2	Interaction between the functional and spatial organization at various scale levels	87
3.5	An overview of the literature on postponement	89
3.6	Conclusions	92

#### **4 Preliminary framework for triangulation 95**

4.1	Introduction	95
4.2	The integration of internationalization strategy and postponement	95
4.2.1	Integrating time, place, and form postponement in the spatial and temporal context	98
4.3	A conceptual starting point for empirical analysis	102
4.4	Triangulation	105
4.4.1	Common use of triangulation; synergistic qualitative and quantitative methods	106
4.4.2	The use of triangulation in this study	106
4.5	Conclusions	111

#### **5 Case study results 113**

5.1	Introduction	113
5.2	Case study methodology	113
5.3	Brief description of case studies	121
5.4	Drivers of the implementation process	128
5.5	The role of operating characteristics	130
5.5.1	Design for logistics	135
5.5.2	The decision model	136
5.6	The restructuring of the plant network	144
5.6.1	Comparison of restructuring patterns	147
5.7	Pursuing internationalization strategy through postponed manufacturing	149
5.7.1	The planning and change process	151
5.7.2	Contribution of postponed manufacturing to the formation of network organizations	151
5.8	Costs and benefits of postponed manufacturing	153
5.9	Model development for further study	156
5.10	Conclusions	158

## **6 Calculation results 161**

- 6.1 Introduction 161
- 6.2 Methodology 161
  - 6.2.1 Modeling considerations 161
  - 6.2.2 Model development and application 164
  - 6.2.3 Comparison with postponement models used in literature 165
  - 6.2.4 The selection of operational characteristics for further study 166
- 6.3 Introduction to the calculation structure 167
- 6.4 Results 168
- 6.5 Evaluation of the model 170
- 6.6 Conclusions 171

## **7 Survey results 175**

- 7.1 Introduction 175
- 7.2 Survey methodology 175
  - 7.2.1 Operationalization 177
  - 7.2.2 Reponse rate and validity 178
- 7.3 Survey of the size and scope of existing postponement applications 181
  - 7.3.1 Size and scope of postponement applications across sectors 181
  - 7.3.2 Impact of postponed manufacturing on employment in the Netherlands and specific regions 184
- 7.4 The application of postponement, the general operating environment and strategic setting 186
- 7.5 The development of location selection factors 187
- 7.6 Postponement in the context of internationalization strategy 190
- 7.7 The relation between operating context and the application of postponement 191
- 7.8 Geographic mobility and centralization 192
  - 7.8.1 The relation between strategic capabilities and the scale level of operating 192
  - 7.8.2 The relation between strategic capabilities and spatial mobility 193
- 7.9 The role of a company's home continent 194
- 7.10 Conclusions 197

## **8 Synthesis and conclusions 199**

- 8.1 Introduction 199
- 8.2 Main conclusions 199
- 8.3 Sub-question 1: Why have companies only recently been turning to postponed manufacturing systems? 199
- 8.4 Sub-question 2: Where on an industry level can postponed manufacturing best be implemented, and to what extent have companies actually done this to date? 202
- 8.5 Sub-question 3: How can the implementation of postponed manufacturing be supported with tools and methods? 206
- 8.6 Public interest 207
- 8.7 Some managerial implications 209
- 8.8 Methodological reflection 211
- 8.9 Contribution to knowledge creation 212

8.9.1	Conceptual knowledge	214
8.9.2	Methodological knowledge	215
8.9.3	Knowledge about applications	215
8.10	Suggestions for further research	215
8.11	Final remarks	217

## **References 218**

## **Appendices 225**

A1	Research methodologies further detailed	225
A2	Economic justification of mass customization	233
A3	Calculation model data	236
A4	Survey research tables and figures	239

## **Samenvatting 259**

## **Figures**

1.1	Levels of analysis	21
1.2	Research objectives of the study	25
1.3	Outline of the research process	27
1.4	Design of the study by chapters	31
2.1	Environment-strategy-structure-performance paradigm	33
2.2	Globalization potential of an industry versus globalization of strategy	41
2.3	The global integration and responsiveness grid	41
2.4	Models in relation to global integration and local responsiveness forces	45
2.5	The development of internationalization strategies	49
2.6	Postponed manufacturing operating system	50
2.7	A possible environment-strategy-structure-performance fit	51
3.1	Using the postponement and speculation principle in designing channels	56
3.2	Levels of postponement	62
3.3	A continuum of supply chains	64
3.4	Postponement applications and positions of the customer order decoupling point	65
3.5	Postponement definition framework	67
3.6	Modular production	71
3.7	Design for logistics	71
3.8	Inventory costs and transport volume savings through postponement	72
3.9	The role of operating characteristics in designing a supply chain	74
3.10	Categorization of products based on value and volume	76
3.11	Postponed manufacturing validation model	77
3.12	The role of product differentiation in the categorization of postponement systems	78
3.13	The role of process characteristics in the categorization of postponement systems	78
3.14	The role of technological characteristics in the categorization of postponement systems	79
3.15	The role of market characteristics in the categorization of postponement systems	79
