

Exchange Rates and International Financial Markets

An asset-theoretic perspective
with Schumpeterian innovation

Erich W. Streissler

London and New York

Contents

Lecture I Fundamentals?

Exchange rates in the light of Schumpeter, but not of Diocletian 1

Introductory survey 1

Diocletian's pretium verum 3

Price-theoretic fundamentals of modern economics and their inapplicability to certain assets 9

Schumpeter, Hayek and Keynes on innovation and entrepreneurship 14

Notes 17

Lecture II Preliminaries

Friedman's case for flexible exchange rates versus random walks in theory and practice 20

Stabilizing expectations? 20

Martingales and random walks 27

Some exchange rate empirics 32

Notes 37

Lecture III Equilibria?

Interest parity and purchasing power parity – which kind of equilibria? 41

Purchasing power parity 41

Uncovered interest parity 49

The contradiction between purchasing power parity and uncovered interest parity 54

Notes 58

Lecture IV Divergence

Process analysis of temporal exchange rate equilibria 60

A second look at uncovered interest parity 60

Disequilibrium: slow quantity adjustment of capital 65

A stochastic model of the development of the exchange rate over time 71

Some further aspects of random walks 78

Notes 79

Lecture V Stabilization

Further results on process equilibria and countervailing forces making for mean reversion 81

Some econometric puzzles resolved 81

Inflationary shocks not understood by investors 84

Does the current account stabilize exchange rates? 86

Interest stabilization 95

Notes 99

Lecture VI Mere demand and supply

Stabilization through bounded interest rates and exchange rate theory 'without the contrivance of macroeconomics' 102

Demand and supply theory without 'fundamentals' 102

Contagion 108

Misunderstanding different opinions and risk 114

Notes 116

Lecture VII Non-neutrality

On the neutrality of money – or: the story of Anacharsis the Scythian 118

The problem 118

Neutrality as expounded by Hume 120

Founding neutrality of money in General Equilibrium

Analysis 126

Incomplete markets, information and expectations 131

Non-linear and nominally fixed contracts and wealth effects 135

*Do Walras' Law and budget constraints provide a firm
basis? 137*
Notes 139
