# Contents

Foreword		Page ix
Introduction		xi
Opening Address		xiii
<b>SESSION 1 - WIND STRUCTURE</b>		
1	Summary paper for Session 1	by Professor H A Panofsky 3
2	Standardised maps for hourly mean wind speed over the United Kingdom and some implications regarding wind speed profiles	by Dr P G F Caton 7
3	Full-scale measurements of atmospheric turbulence in a suburban area	by Dr P Duchène-Marullaz 23
4	A theory for flow over escarpments	by Dr P S Jackson (presented by Dr J C R Hunt)33
5	Spatial configuration of gusts	by Professor S Mackey and Dr P K L Ko 41
6	Probabilistic models of extreme wind speeds: Uncertainties and limitations	by Dr E Simiu and J J Filliben 53
7	Tornado risk and wind effect on structures	by Dr Y K Wen and Professor A H-S Ang 63
8	Discussion on Session 1	Rapporteur: R I Harris 75
<b>SESSION 2 - STATIC AND DYNAMIC LOADING</b>		
1	Summary paper for Session 2	by C Scruton 87
2	Pressure distribution on a square cylinder at a small angle of attack in a turbulent cross flow	by A R Barriga, Dr C T Crowe and Professor J A Roberson 89
3	Wind loads on low-rise buildings - effects of roof geometry	by Dr K J Eaton, J R Mayne and Dr N J Cook 95
4	Wind load for cladding design	by Dr R P Lam and Dr L C Lam 111
5	Wall confinement effects on bluff bodies in turbulent flows	by Professor V J Modi and Dr S El-Sherbiny 121
6	Full scale measurements of the dynamic response of tower shaped structures	by Dr-Ing H Ruscheweyh and Dipl-Ing G Hirsch 133
7	Pressure differences across the shell of a hyperbolic natural-draft cooling tower	by Professor R H Scanlan and Professor N J Sollenberger 143
8	Discussion on Session 2	Rapporteur: Professor J E Cermak 151

### SESSION 3 - DYNAMIC RESPONSE I

1	Summary paper for Session 3	by Professor A G Davenport	Page 167
2	The bending moment response of a cantilevered circular cylinder in turbulent flow	by K R Cooper and Dr D Surry	171
3	Prediction of the response of a cable stayed bridge to turbulence	by Dr J D Holmes	187
4	Aerodynamic response characteristics of bridge structures	by Professor I Konishi, Dr N Shiraishi and Dr M Matsumoto	199
5	Model observations of interference effects on oscillatory response of two identical stacks	by Professor T N Krishnaswamy, G N V Rao, S Durvasula and K R Reddy	209
6	Analysis of aeroelastic oscillations of long-span structures by nonlinear multi-dimensional procedures	by Dr T Miyata, Y Kubo and Professor M Ito	215
7	Pressure correlations on a vibrating cylinder	by Professor M Novak and Dr H Tanaka	227
8	On the double-amplitude response of circular cylinders excited by vortex shedding	by H-L Oey, Dr I G Currie and Professor H J Leutheusser	233
9	Some approaches for improving wind stability for cable-stayed girder bridges	by Dr T Okubo, N Narita and K Yokoyama	241
10	Advances in techniques for determining the aeroelastic characteristics of suspension bridges	by J R Richardson	251
11	Theory of the wind analysis of long-span bridges based on data obtainable from section model tests	by Professor R H Scanlan	259
12	Discussion on Session 3	Rapporteur: R E Whitbread	271

### SESSION 4 - DYNAMIC RESPONSE II

1	Summary paper for Session 4	by Professor D J Johns	281
2	The flow about oscillating bluff structures	by Dr P W Bearman and M E Davies	285
3	Dynamic model tests of a high-rise building in wind tunnel flow and in natural winds	by Professor M Fujimoto, Dr T Ohkuma and T Amano	297
4	Turbulent velocities near and fluctuating surface pressures on structures in turbulent winds	by Dr J C R Hunt	309
5	Wind effects on tall buildings	by Professor V Koloušek and Dr M Pirner (not presented)	321
6	An explanation of some effects of turbulence on bluff bodies	by Dr A Laneville, Dr I S Gartshore and Professor G V Parkinson	333

#### SESSION 4 - DYNAMIC RESPONSE II (continued)

7	Cross-wind response of structures to wind action	by Professor W H Melbourne	Page 343
8	Some research on aeroelastic instabilities of bluff structural sections	by Professor Y Nakamura	359
9	Tall rectangular building response to cross-wind excitation	by Dr J W Saunders and Professor W H Melbourne	369
10	An investigation of wind excited transversal oscillations of slender structures	by Dr-Ing F X Schneider and Dr F H Wittmann	381
11	Discussion on Session 4	Rapporteur: Professor B J Vickery	389

#### SESSION 5 - ENVIRONMENTAL EFFECTS

1	Summary paper for Session 5	by Dr A F E Wise	399
2	The ground level wind environment in built-up areas	by Dr N Isyumov and Professor A G Davenport	403
3	Wind environment around buildings: Aerodynamic concepts	by J Gandemer	423
4	Wind effects on air flows in half-enclosed spaces	by Dr S Murakami, Professor T Shoda and Dr N Kobayashi	433
5	Turbulence in building wakes	by Dr J A Peterka and Professor J E Cermak	447
6	A wind tunnel study of wind velocities in passages between and through buildings	by B G Wirén	465
7	Discussion on Session 5	Rapporteur: T V Lawson	477

#### SESSION 6 - MEASUREMENT TECHNIQUES

1	Summary paper for Session 6	by Professor H Ishizaki	483
2	Pulsed wire anemometer measurements in the flow past a normal flat plate in uniform flow and in sheared flow	by Dr L J S Bradbury and Dr W D Moss	485
3	Structural dynamics of large multi-flue chimneys	by H L Burrough, A P Jeary and J M Wilson	497
4	Flow near a model of a building in simulated atmospheric surface layers generated by the counter-jet technique	by T C Corke, Professor H M Nagib and J Tan-atichat	515
5	A new technique for evaluating the fluctuating lift and drag force distributions on building structures	by Dr N Ellis	527
6	Measurement and interpretation of wind effects on a 50 m high tower	by J Paquet	537

## SESSION 6 - MEASUREMENT TECHNIQUES (continued)

- |   |  |                         |          |
|---|--|-------------------------|----------|
| 7 | The measurement of non-steady wind forces on small-scale building models | by R E Whitbread        | Page 567 |
| 8 | Discussion on Session 6  | Rapporteur: H van Koten | 575      |

## SYMPOSIUM ON 'DESIGNING FOR WIND'

### SESSION 7 - PRACTICAL APPLICATION

- |   |                             |                 |     |
|---|-----------------------------|-----------------|-----|
| 1 | Summary paper for Session 7 | by C W Newberry | 585 |
|---|-----------------------------|-----------------|-----|

#### PART I

- |   |  |  |     |
|---|--|--|-----|
| 2 | Tests to determine wind speeds for scouring and blow-off of rooftop gravel   | by Dr R J Kind   | 591 |
| 3 | The effects of wind on people in the vicinity of buildings   | by T V Lawson and A D Penwarden                            | 605 |
| 4 | Design criteria for stability of cylindrical shells subjected to wind loading  | by K S Prabhu, Dr S Gopalacharyulu and Professor D J Johns | 623 |
| 5 | Glass and curtain wall: Effects of high winds: Required design criteria  | by H S Saffir  | 633 |
| 6 | A proposed European Code of Practice: Current work of the ECCS towards specification of the effect of wind on structures | by Dr D Sfintesco and Dr T A Wyatt                         | 643 |
| 7 | On the design of glass pane against wind loading   | by Professor H Ishizaki, S Myoshi and T Muira              | 655 |
| 8 | Discussion on Session 7: Part I  | Rapporteur: Professor W H Melbourne                        | 663 |

#### PART II

- |    |   |  |     |
|----|---|--|-----|
| 9  | The value of wind research to civil engineering                             | by Dr P K Stansby and Dr L R Wootton                           | 669 |
| 10 | On damping wind-induced vibrations of flexible structures                   | by Professor B G Korenev (not presented)                       | 685 |
| 11 | Serviceability analysis for wind loads on buildings                         | by Dr M J O'Rourke and Professor R A Parmelee                  | 699 |
| 12 | Reliability based design of slender structures under wind action            | by Dipl-Ing H Panggabean, Dr G I Schuëller and Dr F M Wittmann | 707 |
| 13 | Equivalent static wind loads for tall building design                       | by Dr E Simiu  | 721 |
| 14 | Tall guyed tower response to wind loading                                   | by J W Vellozzi (presented by Dr E Simiu)                      | 735 |
| 15 | Investigations of wind design criteria using a statistical simulation model | by Dr G R Walker   | 745 |
| 16 | Discussion on Session 7: Part II  | Rapporteur: Dr T A Wyatt                                       | 755 |

## SESSION 8 - RELEVANCE TO DESIGN

1	Summary paper for Session 8	by Dr A R Flint	Page 761
2	Wind Engineering - the personal view of a practising engineer	by K C Anthony	765
3	The relevance of wind structure to design	by R I Harris	773
4	The relevance of static and dynamic loading to design	by L E Robertson	777
5	The relevance of environmental effects to design	by T V Lawson	781
6	The relevance of codification to design	by Professor W H Melbourne	785
7	The relevance of probabilistic analysis to design	by Dr T A Wyatt	791
8	Discussion on Session 8	Rapporteur: J R Mayne	793
