Preface	vii
Introduction	1

PART I. THEORY

Chapter 1. Processes Discrete in Space and Time	9
1.1 Introduction	9
1.2 Fundamental Definitions and Properties	10
1.3 Calculation of Moments and Cumulants	20
1.4 The Fundamental Theorem Concerning Branching Processes	23
1.5 Remarks on the Number of Generations to Extinction	26
1.6 Limit Theorems	27
1.7 Representation as Random-walk Processes	43
1.8 N -dimensional Branching Processes	47
Problems	51
Bibliography	53
Chapter 2. Processes Discrete in Space and Continuous in Time	57
2.1 Introduction	57
2.2 Fundamental Equations of Discontinuous Markov Processes	57
2.3 Infinite Systems of Differential-Difference Equations	61
2.4 Some Discontinuous Markov Processes and Their Properties	72
2.5 Age-dependent Branching Stochastic Processes	94
2.6 Limit Theorems	102
2.7 N -dimensional Discontinuous Processes	118
Problems	121
Bibliography	124

Chapter 3. Processes Continuous in Space and Time	129
3.1 Introduction	129
3.2 Diffusion Processes on the Real Line: The Theory of Kolmogorov	130
3.3 Diffusion Processes on the Real Line: The Theory of Feller	142
3.4 First-passage Time Problems for Diffusion Processes	148
3.5 Diffusion-equation Representation of Discrete Processes	154
3.6 <i>N</i> -dimensional Diffusion Processes	158
Problems	160
Bibliography	162

PART II. APPLICATIONS

Chapter 4. Applications in Biology	167
4.1 Introduction	167
4.2 Growth of Populations	168
4.3 Growth of Populations Subject to Mutation	192
4.4 Stochastic Theory of Epidemics	198
4.5 Diffusion Processes in the Theory of Gene Frequencies	213
4.6 Radiobiology	223
Bibliography	230
Chapter 5. Applications in Physics: Theory of Cascade Processes	235
5.1 Introduction	235
5.2 Electron-photon Cascades	238
5.3 Nucleon Cascades	265
5.4 Ionization Cascades	276
5.5 The Ramakrishnan-Srinivasan Approach to Cascade Theory	282
5.6 Some Additional Studies on Cascade Processes	287
Bibliography	289
Chapter 6. Applications in Physics: Additional Applications	295
6.1 Introduction	295
6.2 Theory of Radioactive Transformations	295
6.3 Theory of Particle Counters	299
6.4 A Problem Concerning Nuclear Fission Detectors	313
6.5 Theory of Tracks in Nuclear Research Emulsions	317
6.6 Some Problems in the Theory of Nuclear Reactors	323
Bibliography	331
Chapter 7. Applications in Astronomy and Astrophysics	334
7.1 Introduction	334
7.2 Theory of Fluctuations in Brightness of the Milky Way	335
7.3 Theory of the Spatial Distribution of Galaxies	347
7.4 Stochastic Theory of Radiative Transfer	350
Bibliography	357
Chapter 8. Applications in Chemistry	359
8.1 Introduction	359
8.2 Some Stochastic Models for Chemical Reaction Kinetics	360
8.3 Remarks on Other Applications	371
Bibliography	372

Chapter 9. Applications in Operations Research: The Theory of Queues	374
9.1 Introduction	374
9.2 Representation of Queueing Processes. General Theory	377
9.3 Applications to Telephone Traffic Theory	395
9.4 Applications to the Servicing of Machines	407
9.5 Some Special Queueing Processes	425
Bibliography	434

APPENDIXES

Appendix A Generating Functions	439
Appendix B The Laplace and Mellin Transforms	443
Appendix C Monte Carlo Methods in the Study of Stochastic Processes	449
Name Index	459
Subject Index	464
