CONTENTS

Preface	v
Opening Address	1
W. G. N. GEDDES, CBE, Chairman (Institution of Structural Engineers, Scotland)	

Section 1: Cement Paste and Aggregate

1. Strength and interface bond in concrete	4
G. P. TOGNON and S. CANGIANO (<i>Italy</i>)	
2. Research into the mechanical behaviour of concrete made with portland cement and fly-ashes	15
ION TEOREANU, LAȚAR D. NICOLESCU and STEPHAN ENESCU (<i>Romania</i>)	
3. Contact zone between cement paste and aggregate	24
A. CARLES-GIBERGUES, J. GRANDET and J. P. OLLIVIER (<i>France</i>)	
4. Morphology of interface between zeolite aggregate and cement paste	34
LIAN HUI-ZHEN (<i>People's Republic of China</i>)	

Section 2: Fibrous Reinforcement

1. Structural and mechanical aspects of debonding of a steel bar from a cementitious matrix	40
P. STROEVEN and G. DE WIND (<i>Netherlands</i>)	
2. Investigation of steel fibre debonding processes in cement paste	51
J. POTRZEBOWSKI (<i>Poland</i>)	
3. Bond in glass reinforced cements	60
PETER BARTOS (<i>Great Britain</i>)	
4. On the calculation of fracture energy in steel fibre reinforced concrete elements subjected to bending	73
A. M. BRANDT (<i>Poland</i>)	

Section 3: Fundamental Relationships

1. Shear-confinement interaction at the bar-to-concrete interface	82
PIETRO G. GAMBAROVA (<i>Italy</i>) and CENGİZ KARAKOÇ (<i>Turkey</i>)	
2. Tension stiffening: A fracture mechanics approach	97
WALTER GERSTLE, ANTHONY R. INGRAFFEA and PETER GERGELY (<i>USA</i>)	
3. On the effective axial stiffness of a bar in cracked concrete	107
EZIO GIURIANI (<i>Italy</i>)	

Section 4: Methods of Testing

1. A new type of bond test specimen 127
D. H. JIANG (*People's Republic of China*), A. T. ANDONIAN and S. P. SHAH (*USA*)
2. Bond-slip characteristics of plain reinforcing bars under varying stress 140
E. W. BENNETT and I. G. SNOUNOU (*Great Britain*)

Section 5: Cyclic, Impact and Sustained Loading

1. Local bond strength of concrete for cyclic reversed loading 151
NEIL M. HAWKINS, I. J. LIN and F. L. JEANG (*USA*)
2. On the reversibility properties of bond in concrete 162
M. ARNAUD, M. BOURABRAB and M. LORRAIN (*France*)
3. Bond stress-slip behaviour of deformed bars, plain bars and strands under impact loading 173
E. VOS and H. W. REINHARDT (*Netherlands*)
4. Time-dependence of bond 183
F. S. ROSTÁSY and B. KEPP (*Federal Republic of Germany*)
5. Bond relaxation and bond-slip creep under monotonic and cyclic actions 193
P. PLAINÈS, T. TASSIOS and E. VINTZÉLEOU (*Greece*)

Section 6: Thermal Effects and Corrosion

1. The effect of elevated temperature on the bond behaviour of embedded reinforcing bars 206
H. SAGER and F. S. ROSTÁSY (*Federal Republic of Germany*)
2. The behaviour of reinforced concrete at elevated temperatures with particular reference to bond strength 217
R. ROYLES, P. D. MORLEY and M. R. KHAN (*Great Britain*)
3. Changes in bond behaviour due to elevated temperatures 229
U. DIEDERICHES and U. SCHNEIDER (*Federal Republic of Germany*)
4. Influence of sodium chloride on the concrete/steel and galvanised steel bond 239
N. SAKAMOTO and N. IWASAKI (*Japan*)

Section 7: Transverse Tension and Compression

1. Influence of tensile release in concrete on transfer bond of reinforcement bars 250
V. NAVARATNARAJAH (*Malaysia*)
2. Effect of lateral pressure on bond of reinforcing bars in concrete 262
P. J. ROBINS and I. G. STANDISH (*Great Britain*)

Section 8: Properties of Concrete and Construction Methods

1.	Densified cement matrix improves bond with reinforcing steel	273
	THEODOR A. BÜRGE (<i>Switzerland</i>)	
2.	A new concrete mixing method for improving bond mechanism	282
	MITSUTAKA HAYAKAWA and YASURO ITOH (<i>Japan</i>)	
3.	Bond performance of ribbed bars (pull-out-tests): Influence of concrete composition and consistency	289
	H. MARTIN (<i>Federal Republic of Germany</i>)	
4.	Effect of casting position on bond	300
	JAMES O. JIRSA, JOHN E. BREEN, JOSEPH J. LUKE and BILAL S. HAMAD (<i>USA</i>)	
5.	Effect of construction procedures on bond strength in bridge decks	308
	DAVID DARWIN and REX C. DONAHEY (<i>USA</i>)	

Section 9: Laps, Splices and Transverse Reinforcement

1.	Tensile lap splices with confining reinforcement	318
	RALEJS TEPFERS (<i>Sweden</i>)	
2.	Bond capacity of deformed bars due to splitting of surrounding concrete	331
	SHIRO MORITA and SHIGERU FUJII (<i>Japan</i>)	
3.	Bond performance of ribbed reinforcing bars in lapped joints	342
	JOHN CAIRNS and KEITH JONES (<i>Great Britain</i>)	
4.	Design of lapped splices of welded wire fabric	353
	H. R. TEWES (<i>Federal Republic of Germany</i>)	

Section 10: Structural Elements and Details

1.	Influence of impact loading on bond	363
	S. SORETZ (<i>Austria</i>)	
2.	Experimental determination of anchoring length in the column-foundation joints	368
	ENES SEFEROVIĆ (<i>Yugoslavia</i>)	
3.	Compression anchorage stresses in bases	380
	A. W. ASTILL and M. TURAN (<i>Great Britain</i>)	
4.	Effect on bond between concrete and deformed bar on mechanical behaviour of reinforced concrete columns.	388
	Y. TANIGAWA, K. BABA and K. YAMADA (<i>Japan</i>)	
5.	Effects of driving-in on bond in concrete piles	409
	HELMUT VOGT (<i>Federal Republic of Germany</i>)	
6.	Bond of seven-wire strand for prestressed steel	415
	T. JAVOR and J. LAZAR (<i>Czechoslovakia</i>)	

Section 11: Design Codes and Practice

1. Interaction between anchorage of bond, hooks and welded transverse bars; basis for the design in the German code DIN 1045 and CEB-FIP model code 424
P. SCHIEßL (*Federal Republic of Germany*)
2. Bond strength of deformed bars 434
G. C. REYNOLDS and A. W. BEEBY (*Great Britain*)
3. Bond, and control of cracking in reinforced concrete 446
GEOFFREY D. BASE (*Australia*)
4. Probabilistic aspects of bond-governed problems based on local bond force-slip diagrams determined by a new method 458
ANDOR WINDISCH (*Hungary*)
