<b>Preface</b>	<b>v</b>
<b>1 Classification of Scheduling Problems</b>	<b>1</b>
1.1 Scheduling Problems . . . . .	1
1.2 Job Data . . . . .	1
1.3 Job Characteristics . . . . .	3
1.4 Machine Environment . . . . .	4
1.5 Optimality Criteria . . . . .	6
1.6 Examples . . . . .	7
<b>2 Some Problems in Combinatorial Optimization</b>	<b>11</b>
2.1 Linear and Integer Programming . . . . .	11
2.2 Transshipment Problems . . . . .	12
2.3 The Maximum Flow Problem . . . . .	13
2.4 Bipartite Matching Problems . . . . .	14
2.5 The Assignment Problem . . . . .	17
2.6 Arc Coloring of Bipartite Graphs . . . . .	22
2.7 Shortest Path Problems and Dynamic Programming . . . . .	25
<b>3 Computational Complexity</b>	<b>37</b>
3.1 The Classes $\mathcal{P}$ and $\mathcal{NP}$ . . . . .	37
3.2 $\mathcal{NP}$ -complete and $\mathcal{NP}$ -hard Problems . . . . .	41
3.3 Simple Reductions Between Scheduling Problems . . . . .	46
3.4 Living with $\mathcal{NP}$ -hard Problems . . . . .	49
3.4.1 Local Search Techniques . . . . .	49

3.4.2	Branch-and-Bound Algorithms . . . . .	54
<b>4</b>	<b>Single Machine Scheduling Problems</b>	<b>60</b>
4.1	Minimax Criteria . . . . .	60
4.1.1	Lawler's Algorithm for $1   prec   f_{\max}$ . . . . .	60
4.1.2	$1   prec; p_j = 1; r_j   f_{\max}$ and $1   prec; pmtn; r_j   f_{\max}$ . . . . .	62
4.2	Maximum Lateness and Related Criteria . . . . .	66
4.3	Total Weighted Completion Time . . . . .	72
4.3.1	$1   tree   \sum w_j C_j$ . . . . .	72
4.3.2	$1   sp   \sum w_j C_j$ . . . . .	79
4.4	Weighted Number of Late Jobs . . . . .	84
4.4.1	$1   r_j; p_j = 1   \sum w_j U_j$ . . . . .	84
4.4.2	$1    \sum U_j$ . . . . .	86
4.4.3	$1   r_j; pmtn   \sum w_j U_j$ . . . . .	88
4.5	Total Weighted Tardiness . . . . .	93
4.6	Complexity of One Machine Problems . . . . .	98
<b>5</b>	<b>Parallel Machines</b>	<b>100</b>
5.1	Independent Jobs . . . . .	100
5.1.1	Identical Machines . . . . .	100
5.1.2	Uniform Machines . . . . .	115
5.1.3	Unrelated Machines . . . . .	127
5.2	Jobs with Precedence Constraints . . . . .	130
5.2.1	$P   tree; p_i = 1   L_{\max}$ -Problems . . . . .	130
5.2.2	Problem $P2   prec; p_i = 1   L_{\max}$ . . . . .	135
5.3	Complexity Results . . . . .	140

<b>6</b>	<b>Shop Scheduling Problems</b>	<b>143</b>
6.1	The Disjunctive Graph Model . . . . .	143
6.2	Open Shop Problems . . . . .	146
6.2.1	Arbitrary Processing Times . . . . .	146
6.2.2	Unit Processing Times . . . . .	149
6.3	Flow Shop Problems . . . . .	162
6.3.1	Minimizing Makespan . . . . .	163
6.4	Job Shop Problems . . . . .	167
6.4.1	Problems with Two Machines . . . . .	167
6.4.2	Problems with Two Jobs. A Geometric Approach	175
6.4.3	Job Shop Problems with Two Machines . . . . .	184
6.4.4	A Branch & Bound Algorithm . . . . .	190
6.4.5	Applying Tabu-Search to the Job Shop Problem .	209
6.5	Mixed Shop Problems . . . . .	214
6.5.1	Problems with Two Machines . . . . .	214
6.5.2	Problems with Two Jobs . . . . .	214
6.6	Complexity of Shop Scheduling Problems . . . . .	220
<b>7</b>	<b>Due-Date Scheduling</b>	<b>225</b>
7.1	Problem 1   $d_{opt}$   $\sum w_i   L_{\sigma(i)}   + w_0 \cdot d$ . . . . .	225
7.2	Problem 1   $d_{opt}$   $w_E \sum E_i + w_T \sum T_i + w_0 d$ . . . . .	229
7.3	Problem 1   $d$   $\sum w_i   L_{\sigma(i)}  $ . . . . .	231
7.4	Problem 1   $d$   $w_E \sum E_i + w_T \sum T_i$ . . . . .	237
7.5	Problem 1   $d$   $  L_i  _{\max}$ and 1   $d_{opt}$   $  L_i  _{\max}$ . . . . .	240
7.6	Problem 1   $d_{opt}$   $\sum w_i   L_i  $ . . . . .	242
7.7	Problem 1   $d$   $\sum w_i   L_i  $ . . . . .	244

<b>8</b>	<b>Batching Problems</b>	<b>248</b>
8.1	Single Machine Batching Problems . . . . .	248
8.2	Complexity Results for Single Machine Batching Problems	252
<b>9</b>	<b>Changeover Times and Transportation Times</b>	<b>254</b>
9.1	Single Machine Problems . . . . .	255
9.2	Problems with Parallel Machines . . . . .	259
9.3	General Shop Problems . . . . .	263
<b>10</b>	<b>Multiprocessor Tasks</b>	<b>264</b>
10.1	Multiprocessor Tasks Systems . . . . .	265
10.2	Shop Problems with <i>MPT</i> : Arbitrary Processing Times	269
10.3	Shop Problems with <i>MPT</i> : Unit Processing Times . . .	274
10.4	Complexity Results . . . . .	280
<b>11</b>	<b>Multi-Purpose Machines</b>	<b>284</b>
11.1	<i>MPM</i> Problems with Identical and Uniform Machines .	285
11.2	<i>MPM</i> Problems with Shop Characteristics . . . . .	291
11.2.1	Arbitrary Processing Times . . . . .	291
11.2.2	Unit Processing Times . . . . .	301
11.3	Complexity Results . . . . .	305
