# Software Measurement

Current Trends in Research  
and Practice

DeutscherUniversitätsVerlag

## Table of Contents

|                                                                                                                 |           |
|-----------------------------------------------------------------------------------------------------------------|-----------|
| Foreword .....                                                                                                  | V         |
| Table of Contents .....                                                                                         | VII       |
| <b>I. Software Measurement History and Future Directions .....</b>                                              | <b>1</b>  |
| <i>Horst Zuse</i>                                                                                               |           |
| Thirty Years of Software Measurement .....                                                                      | 3         |
| <i>Charles R. Symons</i>                                                                                        |           |
| Function Point Evolution .....                                                                                  | 39        |
| <b>II. Software Measurement Foundations .....</b>                                                               | <b>41</b> |
| <i>Jean-Philippe Jacquet, Alain Abran</i>                                                                       |           |
| Metrics Validation Proposals: A Structured Analysis .....                                                       | 43        |
| <i>Geert Poels</i>                                                                                              |           |
| On the use of a Segmentally Additive Proximity Structure to<br>Measure Object Class Life Cycle Complexity ..... | 61        |
| <i>Lem. O. Ejiogu</i>                                                                                           |           |
| Attribute-Based Model of Software Size .....                                                                    | 81        |
| <i>Luigi Buglione, Alain Abran</i>                                                                              |           |
| Multidimensional Software Performance Measurement Models:<br>A Tetrahedron-based Design .....                   | 93        |
| <i>Frank Niessink, Hans van Vliet</i>                                                                           |           |
| A Pastry Cook's View on Software Measurement .....                                                              | 109       |
| <i>Vedha Kichenamourty</i>                                                                                      |           |
| Metric for Effective Test Coverage .....                                                                        | 127       |

|                                                                                |            |
|--------------------------------------------------------------------------------|------------|
| <b>III. Software Measurement Applications .....</b>                            | <b>141</b> |
| <i>Harry M. Sneed, Oliver Foshag</i>                                           |            |
| Measuring Legacy Database Structures .....                                     | 143        |
| <i>Sue Black</i>                                                               |            |
| REST - A Tool to Measure the Ripple Effect of C and C++<br>Programs .....      | 159        |
| <i>Reiner R. Dumke, Achim S. Winkler</i>                                       |            |
| Y2K from a Metrics Point of View .....                                         | 173        |
| <i>Stephen H. Edwards, Sallie M. Henry, Roger P. Bodnar, Jr.</i>               |            |
| Software Metrics for Multimedia Languages .....                                | 195        |
| <i>Christof Ebert, Thomas Liedtke, Ekkehard Baisch</i>                         |            |
| Improving Reliability of Large Software Systems .....                          | 209        |
| <i>Andreas Schmietendorf</i>                                                   |            |
| Prototype of a Software Metrics Database for industrial use .....              | 229        |
| <b>IV. Function Point Foundations and Applications .....</b>                   | <b>245</b> |
| <i>Jean-Marc Desharnais, Pam Morris</i>                                        |            |
| Comparison between FPA and FFP: a field experience .....                       | 247        |
| <i>Maya Daneva</i>                                                             |            |
| Function Point Counts Derived from SAP Business Scenario<br>Requirements ..... | 265        |
