CONTENTS

Part I General Considerations

1. Approaches to Stochastic Modeling 3

1.1 Types of Models 3
1.2 Characteristics of Stochastic Models of Buying Behavior 7
1.3 Survey of the Literature and Plan of the Book 14

2. Estimating and Testing Stochastic Models 21

2.1 Introductory Comment 21
2.2 Estimation 21
2.3 Goodness of Fit 33

Part II Brand-Choice Models

3. Zero-Order Models 52

3.1 Bernoulli Processes 52
3.2 Early Models of Consumer Behavior 52
3.3 Spurious Effects of Heterogeneity 53
3.4 Overview of Compound Bernoulli Models 59
3.5 Compound Beta Bernoulli Model 60
3.6 Compound Bernoulli Model with Arbitrary Heterogeneity 69
3.7 Testing the Goodness of Fit of the Models 70
3.8 Parameter Estimation for the Compound Bernoulli Model 77
3.9 Another Class of Bernoulli Models 77
3.10 Concluding Remarks on the Compound Bernoulli Models 79

4. Two State Markov Models 80

4.1 Markov Processes 80
4.2 The Spurious Effects of Heterogeneity Revisited 83
4.3 Statistical Inference on Homogeneous Population 84
4.4 Applications of Markov Chains 87
4.5 Compound Markov Models 94
4.6 The Symmetric First-Order Markov Model 95
4.7 The Brand Loyal and Last Purchase Loyal Models 99
4.8 General First-Order Compound Models 110
4.9 Some Special Second-Order Models 113
4.10 Empirical Results 117
4.11 Applications of the Compound Models to Other Fields 136
4.12 Appendix: The Evalutation of $\int_0^1 \frac{1}{a-p} p^{m-1}(1-p)^{n-1}\,dp$ 138

5. Linear Learning Models for Brand Choice 141

5.1 Introduction 141
5.2 Linear Learning Model Microtheory 145
5.3 An Early Application of Linear Learning Theory 152
5.4 Macrotheory and Parameter Estimation 157
5.5 Comparison with Other Models 167
5.6 Empirical Results 170

6. A Probability Diffusion Model 190

6.1 Introduction 190
6.2 The Probability Diffusion Model: An Overview 190
6.3 Comparison with Previous Models 197
6.4 Assumptions and General Form of the Model 200
6.5 The Independent Elements Specification 205
6.6 The Cohesive Elements Specification 214
6.7 Estimating and Testing the Probability Diffusion Model 233

7. Application of the Probability Diffusion Model 254

7.1 Introduction 254
7.2 Empirical Considerations 254
7.3 Minimum Chi-Square Estimation for the Crest Case 260
7.4 Empirical Comparison of Four Stochastic Models 267

Part III Purchase Incidence Models

8. Models for Purchase Timing and Market Penetration 275

8.1 Fundamentals 276
8.2 Poisson-Exponential Models 286
8.3 Logistic Models 299
8.4 Learning Models 310
8.5 Summary 323

9. A Stochastic Model for Monitoring New Product Adoption 325

9.1 Introduction to STEAM 327
9.2 Properties of STEAM 345
9.3 Comparison of Models 361
9.4 Forecasts Based on Penetration Models 367

10. Parameter Estimation and Some Emperical Results for STEAM 375

10.1 Methods of Parameter Estimation 375
10.2 The STEAM Projection Simulation 385
10.3 Empirical Results for Product *A* 391
10.4 Empirical Results for Product *B* 399

11. Extensions to STEAM 414

11.1 Review of Basic STEAM 414
11.2 Purchases of Other Products or Brands 416
11.3 Effects of Marketing Variables 428
11.4 Effects of Household Descriptor Variables 435
11.5 Computational Considerations 440

Appendix: On Numerical Methods for Parameter Estimation 445
