

W.J. Stronge and T.X. Yu

Dynamic Models for Structural Plasticity

With 175 Figures

Springer-Verlag

London Berlin Heidelberg New York

Paris Tokyo Hong Kong

Barcelona Budapest

Contents

List of Symbols	xvii
1 Elastoplastic and Viscoplastic Constitutive Relations	1
1.1 Stress Resultants and Generalized Stress — Deformations and Generalized Strain	1
1.2 Pure Bending of Rate-Independent Bar	2
1.2.1 Kinematics of Deformation	2
1.2.2 Elastic Constitutive Equation	4
1.2.3 Stress Resultants (Axial Force and Bending Moment)	4
1.2.4 Elastic–Plastic Constitutive Equations	5
1.2.5 Elastic–Power Law Hardening Constitutive Equations	9
1.3 Pure Bending of Rate-Dependent Bar	9
1.3.1 Strain-Rate Dependent Constitutive Equations ..	9
1.4 Interaction Yield Functions and Associated Plastic Flow	12
1.4.1 Elastic Limit for Bending and Tension	12
1.4.2 Fully Plastic Limit Surface for Bending and Tension in Elastic–Perfectly Plastic Bar	12
1.4.3 Yield and Fully Plastic Stress Condition	15
1.4.4 Associated Flow Rule for Plastic Deformations ..	16
1.4.5 Separated Yield Functions and Separated Plastic Flow	18
1.5 Interaction Yield Surfaces Including Shear	19
1.5.1 Tension, Shear and Bending in Rectangular Cross-Section	19
1.5.2 Tension, Torsion and Bending in Circular Cross-Section	20
1.6 Elastic Springback	23
1.6.1 Pure Bending	23
1.6.2 Bending and Tension	25
References	27

2	Principles of Mechanics	29
2.1	Kinematics	29
2.1.1	Inertia Properties of Cross-Section	31
2.2	Balance of Forces	31
2.2.1	Stress Resultants and Generalized Stresses	31
2.2.2	Equations of Motion	32
2.3	Principle of Virtual Velocity	34
2.3.1	Rate of Change for Kinetic Energy of System	35
2.3.2	Rate of Change for Kinetic Energy of Kinematically Admissible Velocity Field \dot{W}_i^c	35
2.3.3	Extremal Principles for Complete Solution	36
2.4	Bounds For Rigid-Perfectly Plastic Solids and Structures	37
2.4.1	Upper and Lower Bounds on Static Collapse Force	37
2.4.2	Lower Bound on Dynamic Response Period	38
2.4.3	Upper Bound on Dynamic Response Period	39
2.4.4	Lower Bound on Final Displacement	40
2.4.5	Upper Bound on Final Displacement	41
2.5	Dynamic Modes Of Deformation	44
2.5.1	Modal Solutions	44
2.5.2	Properties of Modes	44
2.5.3	Mode Approximations for Structural Response to Impulsive Loading	47
	References	48
3	Static Deflection	51
3.1	Small Elastic-Plastic Deflections	51
3.1.1	Elastic Deflections	52
3.1.2	Deflection of Elastic-Perfectly Plastic Cantilever	54
3.1.3	Deflection of Elastic-Linear Strain Hardening Cantilever	55
3.1.4	Residual Deflection After Elastic Unloading	58
3.1.5	Elastoplastic Beam-Columns	61
3.2	Large Elastic-Plastic Deflections	63
3.2.1	Elastica: Large Elastic Deflection	63
3.2.2	Plastica: Large Plastic Deflection	67
	References	72
4	Dynamic Rigid-Plastic Response	73
4.1	Step Loading	73
4.1.1	Static and Dynamic Loadings	73
4.1.2	Moderate Dynamic Load ($F_c < F < 3F_c$)	75
4.1.3	Intense Dynamic Load ($F > 3F_c$)	78
4.2	Rectangular Pulse Loading	80
4.2.1	Three Phases in Response of Cantilever	80
4.2.2	Deformed Shape	84
4.2.3	Energy Dissipation	85
4.2.4	Synopsis	87

4.3	Features of Travelling Hinges	88
4.4	General Pulse Loading	90
4.4.1	General Considerations	90
4.4.2	Example: Linearly Decaying Pulse	93
4.4.3	Equivalent Replacement of Arbitrary Pulse	94
4.5	Impact on Cantilever	96
4.5.1	Problem and Assumptions	97
4.5.2	Changing Pattern of Deformation	98
4.5.3	Acceleration, Force and Bending Moment	101
4.5.4	Deformed Shape	103
4.5.5	Energy Dissipation	105
4.5.6	Modal Approximation	106
	References	110
