contents

Preface	v
1 Introduction	1
1.1 What is econometrics?	1
1.2 The plan of this text	3
Appendix 1A Notes to Chapter 1	7
2 Probability distributions	9
2.1 Stochastic variables and probability distributions	9
2.2 Continuous stochastic variables	18
2.3 Joint, marginal and conditional probability distributions	24
2.4 Mathematical expectations of functions of more than one variable	29
2.5 Independence versus non-correlation	38
Appendix 2A Notes to Chapter 2	40
Further reading	41
3 Statistical inference	42
3.1 Some basic concepts of statistical inference	42
Worked example	46
3.2 Estimation of a population mean	48
3.3 Testing hypotheses about a population mean	53
3.4 Some other important test statistics and their distributions	63
Worked example	66

	Worked example	70
	Appendix 3A Notes to Chapter 3	74
	Further reading	74
4	Two-variable regression analysis	75
4.1	The population and sample regression lines	77
4.2	The ordinary least squares estimation method	81
4.3	Measuring closeness of fit	86
4.4	Some words of warning	94
4.5	Nonlinear regression	96
	Appendix 4A Notes to Chapter 4	104
5	Estimators and methods of estimation	106
5.1	The small-sample properties of estimators	107
5.2	The large-sample properties of estimators	112
5.3	A Monte Carlo experiment	119
5.4	Methods of estimation	123
	Appendix 5A The properties of probability limits	132
	Appendix 5B Notes to Chapter 5	133
	Further reading	134
6	The classical two-variable regression model	135
6.1	The assumptions of the classical two-variable regression model	135
6.2	Properties of the OLS estimators	139
6.3	Making inferences about the regression parameters	144
6.4	Nonlinear regression again	154
6.5	Relaxation of the assumption of non-stochastic X	159
	Appendix 6A The best linear unbiasedness of the OLS estimators	162
	*Appendix 6B Maximum likelihood estimation of regression parameters	164
	Appendix 6C The biasedness of the maximum likelihood estimator of σ^2	165
	Appendix 6D Why we use the t distribution in two-variable regression	166
	Appendix 6E Notes to Chapter 6	167
	Further reading	168

7	The classical multiple regression model	169
7.1	Ordinary least squares estimation in multiple regression	170
	Worked examples	175
	Worked examples (continued)	179
7.2	The classical assumptions in multiple regression	183
7.3	Properties of the OLS estimators	186
7.4	Inference in multiple regression	191
	Worked examples (continued)	192
	Computer exercise	196
	Appendix 7A The OLS estimators with two explanatory variables	201
	*Appendix 7B Consistency of the OLS estimators in multiple regression	202
	*Appendix 7C Maximum likelihood and multiple regression	203
	Appendix 7D Notes to Chapter 7	205
	Further reading	205
8	Stochastic explanatory variables	206
8.1	Non-independence of explanatory variables and disturbance	206
8.2	Errors of measurement	211
8.3	Simultaneous equation bias	213
8.4	Instrumental variable estimation	220
8.5	A controlled experiment	221
8.6	The problems arising with IV estimation	230
	Computer exercise	231
8.7	Estimation in simultaneous equation models	233
	Appendix 8A Consistency of the IV estimator	234
	Appendix 8B Notes to Chapter 8	235
	Further reading	236
9	More about multiple regression	237
9.1	Multicollinearity	237
9.2	Linear restrictions on regression parameters	244
*9.3	The testing of nonlinear restrictions	255
9.4	Qualitative explanatory variables	260
	Computer exercise	264
9.5	Testing for parameter stability	266
	Computer exercise	271
	Appendix 9A Derivation of the expressions (9.7)	272

	Appendix 9B Notes to Chapter 9	273
	Further reading	274
10	Non-spherical disturbances	276
10.1	The general case	277
10.2	Heteroskedasticity	279
10.3	Detecting and dealing with heteroskedasticity	284
	Computer exercise	293
10.4	Autocorrelation	296
10.5	Detecting and dealing with autocorrelation	301
10.6	Autoregressive conditional heteroskedasticity	310
	Appendix 10A Notes to Chapter 10	311
	Further reading	312
11	Estimating dynamic models	313
11.1	Some basic ideas	314
11.2	Adjustment lags	316
	Computer exercise I	319
	Computer exercise II	324
11.3	Problems in the estimation of dynamic models	326
11.4	A Monte Carlo study	329
11.5	The formation of expectations	333
	Appendix 11A Notes to Chapter 11	337
	Further reading	338
12	Choosing the appropriate model	339
12.1	The consequences and detection of errors of specification	339
12.2	Data mining	350
12.3	Alternative approaches to selecting the 'best' model	354
12.4	Selecting models: some important criteria	361
12.5	Computer exercises	363
	Appendix 12A Notes to Chapter 12	371
	Further reading	372
13	Handling non-stationary time series	373
13.1	Stationary and non-stationary stochastic processes	373
13.2	Non-stationary variables and the classical model	376
	Computer exercise I	381

13.3	Error correction models	383
13.4	The advantages of the ECM approach	388
13.5	Outstanding problems	392
	Computer exercises II and III	392
	Appendix 13A Notes to Chapter 13	399
	Further reading	400
14	Testing for stationarity	401
14.1	Informal procedures	401
14.2	Statistical tests for stationarity	408
14.3	Deterministic versus stochastic trends	410
	Computer exercise	414
14.4	Some properties of integrated processes	415
	* Appendix 14A Units roots and stationarity	416
	Appendix 14B Testing for unit roots	418
	Appendix 14C Notes to Chapter 14	422
	Further reading	423
15	Cointegration and the estimation of error correction models	424
15.1	Cointegration between two variables	424
15.2	Testing for cointegration between two variables	426
	Computer exercise I	429
15.3	The estimation of two-variable ECMs	431
	Computer exercise II	433
	Computer exercise III	436
15.4	The multivariate case	436
*15.5	Estimation in the multivariate case	440
15.6	An overview	444
	Appendix 15A Computer exercise IV	445
	Appendix 15B Notes to Chapter 15	455
	Further reading	456
16	Further topics	457
16.1	Vector autoregression	457
	Computer exercise I	462
16.2	Exogeneity	463
16.3	Influential observations and robust estimators	466

16.4	Qualitative dependent variables	469
	Computer exercise II	475
	Appendix 16A Notes to Chapter 16	477
	Further reading	478
Appendix I Introduction to matrix algebra		479
AI.1	Matrices and vectors	479
AI.2	Basic definitions and operations	480
AI.3	Matrix algebra as a shorthand	486
AI.4	The inverse matrix	487
AI.5	Determinants	489
AI.6	Finding the inverse matrix	492
AI.7	Linear dependence and rank	495
AI.8	Matrix differentiation	497
	Notes to Appendix I	499
Appendix II Answers to numerical exercises		501
Appendix III The data sets and the floppy disk		511
AIII.1	Data sets 1, 2 and 3	511
AIII.2	Data set 4	512
AIII.3	Data set 5	512
AIII.4	Data set 6	512
Appendix IV Statistical tables		520
Bibliography		527
Index		531

* An asterisk indicates a section containing material of greater conceptual or mathematical complexity. See Introduction, page 7, for more details.
