Preface		age xiii
1	Introduction	1
1.1	Overview and background	1
1.2	References	6
2	Introduction to resonant tunnelling in semiconductor	9
	heterostructures	
2.1	Resonant tunnelling in double-barrier heterostructures	9
2.2	Theory of global coherent resonant tunnelling	15
2.2.1	Transfer matrix theory of transmission probability	15
2.2.2	Self-consistent calculations – introduction of space charge build-up	e 20
2.2.3	Transfer Hamiltonian model	27
2.3	Electron dwell time	30
2.4	Quantised emitter states and 2D-2D resonant tunnelling	34
2.5	Resonant tunnelling in double-well heterostructures	38
2.6	Phase-coherence breaking scattering and sequential tunnelling	44
2.7	References	50
3	Scattering-assisted resonant tunnelling	52
3.1	LO-phonon-emission-assisted resonant tunnelling	53
3.1.1	Phonon-assisted tunnelling and postresonance peak	53
3.1.2	Theoretical investigations of phonon-assisted tunnelling	55
3.1.3	Magnetotunnelling measurements in the valley-current regime	61
3.2	Resonant tunnelling through X-point states	66
3.2.1	Resonant Γ–X-intervalley tunnelling	67

¢

Contents

3.2.2	Lateral momentum non-conserving intervalley tunnelling	72
3.3	Effects of impurity scattering in RTDs	77
3.4	References	85
4	Femtosecond dynamics and non-equilibrium distribution of electrons in resonant tunnelling diodes	88
4.1	Non-equilibrium electron distribution in RTDs	88
4.2	Theory of dissipative quantum transport in RTDs	93
4.2.1	The time-dependent statistical density matrix and the Wigner distribution function	94
4.2.2	Femtosecond electron dynamics in RTDs	100
4.3	Space charge build-up in the quantum well, and intrinsic current bistability of RTDs	113
4.3.1	Numerical analysis of intrinsic current bistability	113
4.3.2	Magnetoconductance measurements of charge build-up	117
4.3.3	Photoluminescence study of charge build-up	124
4.4	Enhancement of current hysteresis under magnetic fields	127
4.5	References	129
5	High-speed and functional applications of resonant tunnelling diodes	133
5.1	High-speed applications of RTDs	134
5.1.1	High-frequency signal generation with RTDs	134
5.1.2	High-speed switching and its application	141
5.2	Functional applications of RTDs	145
5.2.1	Static memory operation of RTDs and related devices	146
5.2.2	Multiple-well resonant tunnelling structures and multi- valued memories	156
5.2.3	Signal processing applications of RTDs and related devices	172
5.3	References	175
6	Resonant tunnelling in low-dimensional double-barrier heterostructures	178
6.1	Low-dimensional resonant tunnelling structures	179
6.2	Theory of zero-dimensional resonant tunnelling	18:
6.2.1	Three-dimensional S-matrix theory	184
6.2.2	Lateral-mode conserving and non-conserving resonant tunnelling	19 1
6.3	Gated resonant tunnelling structures – squeezable quantum dots	20
