

Institut für Wasserbau und Wasserwirtschaft

Technische Universität Darmstadt

„A Contribution to the Uncertainty Analysis of Distributed Hydrological Models“

Vom Fachbereich 13 - Bauingenieurwesen und Geodäsie -
der Technischen Universität Darmstadt
zur Erlangung des Akademischen Grades eines
Doktor-Ingenieurs (Dr.-Ing.) genehmigte

Dissertation

von
Dipl.-Ing. Kai Schröter
aus Kronberg i. Ts.

D17
Darmstadt im November 2008

Contents

1	Introduction	1
1.1	Motivation	2
1.2	Objectives	4
1.3	Approach	5
2	Generalities about uncertainty in hydrological modelling	7
2.1	Definition of uncertainty	7
2.2	Scope of uncertainty analysis	8
2.3	Handling uncertainty	10
2.3.1	Frequentist approach	10
2.3.2	Subjective approach	12
2.3.3	Further approaches	13
3	Uncertainty in hydrological modelling	15
3.1	Conception	15
3.2	Formalism	17
3.3	Model structure uncertainty	19
3.3.1	Reasons for model structure uncertainty	20
3.3.2	Characteristic features of model structure uncertainty	20
3.3.3	Effects on model results	21
3.3.4	Approaches to quantify model structure uncertainty	22
3.4	Parameter uncertainty	24
3.4.1	Reasons for parameter uncertainty	24
3.4.2	Characteristic features of parameter uncertainty	26
3.4.3	Effects on model results	27
3.4.4	Approaches to quantify parameter uncertainty	28
3.5	Input variables uncertainty	30
3.5.1	Reasons for input variable uncertainty	31
3.5.2	Characteristic features of input variable uncertainty	34
3.5.3	Effects on model results	35
3.5.4	Approaches to quantify input variable uncertainty	37
3.6	Output variables uncertainty	40
3.6.1	Reasons for output variables uncertainty	41
3.6.2	Characteristic features of output variables uncertainty	42
3.6.3	Effects on model results	43
3.6.4	Approaches to quantify output variables uncertainty	44
3.7	Analysis of hydrological model predictive uncertainty	45
3.7.1	Forward uncertainty propagation	47
3.7.2	Inverse modelling techniques for uncertainty analysis	50
3.8	Intermediary conclusions and identified research needs	67
4	Methodology	73
4.1	Formal approach to handle uncertainty	74
4.2	Uncertainty analysis method	75

4.3	Representation of input variable uncertainty	77
4.3.1	Input variable uncertainty analysis	80
4.3.2	Input variable uncertainty simulation	81
5	Implementation	83
5.1	Control units	84
5.1.1	System analysis control unit	84
5.1.2	Simulation control unit	85
5.2	Uncertainty analysis unit	85
5.2.1	Stochastic sampling techniques	85
5.2.2	Statistical inference algorithm	86
5.2.3	Statistical analysis methods	89
5.3	Simulation Model	89
5.3.1	Distributed hydrological model WBrM	90
6	Application	95
6.1	Application framework	96
6.1.1	Characteristics of the Besòs river basin	97
6.1.2	Hydrological model set-up	98
6.1.3	Climatologic data	104
6.1.4	Quantification of input variable uncertainty	108
6.1.5	MCMC settings	111
6.2	Uncertainty analysis results	118
6.2.1	System inherent uncertainty using ideal input data	118
6.2.2	Implications of input variable uncertainty	125
6.2.3	Explicit consideration of input variable uncertainty	133
6.3	Discussion of results	144
7	Summary, Conclusions and Outlook	149
7.1	Conclusions and Outlook	151
8	References	155
9	Annex	171
