<i>Prefatory Note</i>	xi
<i>Preface for Social Scientists</i> Robin Marris	xv
1 An Introduction to Theories of Corporate Growth <i>Robin Marris</i>	1
Nature and purposes of <u>growth models of the firm</u> . Basic elements in the models. The dynamic <u>restraints on growth</u> . 'Steady-state' growth. The utility function. Growth by internal finance. Qualitative analysis of the basic model. The effects of external finance. The effects of uncertainty.	
2 Economic Analysis of the Corporate Economy <i>Adrian Wood</i>	37
Introduction: generalization of <u>new models of the firm</u> . <u>The structure of models of the firm</u> . The estimation of <u>models of the growing firm</u> and the identification of motivation. <u>Oligopoly and market structure</u> . <u>General equilibrium of product and capital markets</u> . Macro-economic possibilities. Normative evaluation of the corporate economy.	
3 The Firm in General Equilibrium Theory <i>Kenneth J. Arrow</i>	68
Introduction. The existence of general competitive equilibrium. The firm as price-maker: equilibrium under monopolistic competition. The firm as forecaster: the existence of temporary equilibrium.	
4 Comments on Arrow <i>G. C. Archibald</i>	111
5 On the Behavioral Theory of the Firm <i>William J. Baumol and Maco Stewart</i>	118
Summary and introduction. Behavioral models. Is it a theory? The mark-up model and the Cyert-March results. More recent data and the mark-up model. The mark-down model and the Cyert-March data. Mark-downs in the more recent data. Evaluation: replicability of the results of the model. Evaluation: rationality and conventional maximization. Behavioral analysis and the decisions of the firm. Macro-economic implications of behavioral analysis.	

- 6 Exogenous and Endogenous Factors in the Growth of Firms *Enrico Filippi and Giovanni Zanetti* 144
 Exogenous factors in the growth of firms: demand in the productive sector; the labour factor; the financial incentives. Endogenous factors and the growth of the firm: profitability and growth of the firm; profitability and size. Conclusions.
- 7 Optimum or Maximum Corporate Growth under Uncertainty *John Lintner* 172
 Introduction: the setting and assumptions. The model under certainty. The model with 'stable' uncertainty: the dividend-growth-risk trade-off function; the criterion under uncertainty. A reinterpretation of the effects of simple uncertainty in terms of the duration of the dividend stream. Concluding observations: extensions and comparisons with other models.
 Appendix:
 Optimal steady-state growth of dividends derived from optimization of all other policies. Mathematical notes.
- 8 Modern Monopolies in Economic Development *Siro Lombardini* 242
 Different kinds of monopolies. Barriers to entry and monopolistic profits. The analysis of structural change. The behavioural assumptions for a growing monopoly. The effects of the commercial activity of the monopolistic sector. The process of growth of markets in an economy with a balanced monopolistic sector. The process of growth of an economy with an unbalanced monopolistic sector. The process of growth of an economy with a heterogeneous monopolistic sector. Technical progress and power. Inflationary and deflationary tendencies in a monopolistic economy. The effects of monopolistic strategy on the structure of public expenditure. International relations. Welfare evaluation.
- 9 The Modern Corporation and Economic Theory *Robin Marris* 270
 A conceptual framework: firms and products; the concept of a market; from the firm to the corporation; the transcendent corporation; conclusion - distinguishing 'operating' from 'growing'. Towards a more general theory of oligopoly; the case for presuming co-operation; the effects of unequal threat-strength; the effects of potential entry; the 'entry-deterrent' situation; predictions for prices, profits and efficiency; towards greater generality and interdependence; oligopoly games with expense preference; conclusions. Application of a 'linear' growth model: a possible linear model; an alternative linear model; a 'disturbed' steady state and the size-distribution of corporations. Some conclusions.
- 10 Some Implications of Alternative Criteria for the Firm *Robert M. Solow* 318
 Steady state. Cost conditions. Demand conditions. The value of the firm. The shape of the valuation function. Alternative decision criteria:

- (a) owner-oriented firms; (b) growth-oriented firms. Effect of a change in the price of capital goods. Effect of a change in the rate of discount. Effect of an excise tax. Effect of a tax on profits. A note on taxation of dividend income and capital gains. Conclusion.
- 11 **Managerial Discretion, Organization Form, and the Multi-division Hypothesis** *Oliver E. Williamson* 343
 The unitary-form enterprise: organization of the U-form enterprise; capital-market constraint. The multi-division hypothesis: invention; imitation. Properties of the multi-division form: internal efficiency; strategic decision-making; internal control; the multi-division form hypothesis. Separation of ownership from control. 'Conglomerate' organization. Concluding remarks: dynamic capitalism; institutional failure.
- Appendices
- A **Growth, Profitability and Size: The Empirical Evidence** *John L. Eatwell* 389
 Introduction: the profit rate; the size of the firm. Size and profitability: the distribution of rate of return by size classes; profitability. Size and growth: some notes on optimum size. Profitability and growth: growth, profitability and supply of finance; growth, profitability and expansion; industry surveys. Conclusion.
- B **Some New Results on Growth and Profitability** *Robin Marris* 422
 Some new U.S. results. Some new British results on a restricted sample.
- C **Diversification, Merger and Research Expenditures: A Review of Empirical Studies** *Adrian Wood* 428
 Introduction: some problems of definition and a working convention. Diversification: a cross-section view of its extent. The inter-industry directions of recent diversification. Diversification, merger and the growth and profitability of the firm. Research expenditures and diversification.
