

# A Calculus of Distributed and Parallel Processes

By Prof. Dr. Clemens H. Cap  
Universität Rostock

Technische Universität Darmstadt	
FACHBEREICH INFORMATIK	
<b>B I B L I O T H E K</b>	
Inventar-Nr.:	<u>100-00030</u>
Sachgebiete:	_____
Standort:	_____

B.G. Teubner Stuttgart · Leipzig 2000

# Contents

<b>1</b>	<b>Introduction</b>	<b>13</b>
1.1	What is a Process? – An Introduction . . . . .	13
1.2	Process Theory as Research Area . . . . .	14
1.3	Elements of Process Theory . . . . .	18
1.4	Classification of Process Theories . . . . .	22
1.5	How to Use This Book? – A Reading Guide . . . . .	24
<b>2</b>	<b>Transition Systems</b>	<b>27</b>
2.1	Ordinary Transition Systems . . . . .	28
2.2	Interpreting Transition Systems . . . . .	29
2.3	Typed and Labeled Systems . . . . .	34
2.4	Non-Determinism, Causality, and Behaviour . . . . .	41
2.5	Sequential Composition . . . . .	49
2.6	Fairness . . . . .	53
<b>3</b>	<b>Distributed Transition Systems</b>	<b>59</b>
3.1	Motivation . . . . .	60
3.2	Distributed Transition Systems . . . . .	61
3.3	Non-Determinism, Causality, and Behaviour . . . . .	66
3.4	Examples of Branching Structures . . . . .	73
3.5	Branching Structure and Constructions . . . . .	76
3.6	Branching Structure and Geometry . . . . .	84
3.7	Confusion . . . . .	93
3.8	First Order Transition Systems . . . . .	101
3.9	Fairness . . . . .	109

<b>4</b>	<b>Higher Order Transition Systems</b>	<b>117</b>
4.1	Motivation . . . . .	118
4.2	Higher Order Transition Systems . . . . .	123
4.3	Reversible and Invertible Transitions . . . . .	127
4.4	Forgetting the Higher Order Structure . . . . .	129
<b>5</b>	<b>Process Specification Formalisms</b>	<b>133</b>
5.1	Linear Logic and Transition Systems . . . . .	133
5.2	Linear Logic Process Specification . . . . .	140
5.3	Extensions of the Formalism . . . . .	144
5.4	Equivalence and Abstraction for Processes . . . . .	149
<b>6</b>	<b>Examples</b>	<b>153</b>
6.1	A Specification Language . . . . .	154
6.2	The Stack . . . . .	155
6.3	The Bag . . . . .	163
6.4	Interrupts . . . . .	170
6.5	Data Replication . . . . .	173
6.6	The Alternating Bit Protocol . . . . .	181
6.7	Workflow Management . . . . .	194
6.8	FIBONACCI Numbers . . . . .	197
6.9	An Implementation . . . . .	198
<b>7</b>	<b>Categorical Interpretations</b>	<b>201</b>
7.1	The CURRY-HOWARD Correspondence . . . . .	201
7.2	Transition Systems . . . . .	203
7.3	Linear Logic . . . . .	205
<b>8</b>	<b>Conclusions, Challenges, and Opportunities</b>	<b>209</b>
8.1	What Has Been Achieved? . . . . .	209
8.2	Theoretical Problems . . . . .	215
8.3	Practical Problems . . . . .	219
8.4	Speculations . . . . .	222
8.5	Final Remarks . . . . .	223

<b>A Mathematical Prerequisites</b>	<b>225</b>
A.1 Order Structures . . . . .	225
A.2 Monoids . . . . .	227
<b>B Linear Logic</b>	<b>231</b>
B.1 Universe of Discourse . . . . .	232
B.2 Motivations for Linear Logic . . . . .	235
B.3 Syntax and Natural Deduction . . . . .	240
B.4 Alternate Natural Deduction . . . . .	245
B.5 Sequent Calculus . . . . .	255
B.6 Syntactic Results . . . . .	258
B.7 Interpretation of Linear Formulae . . . . .	265
<b>C Category Theory</b>	<b>271</b>
C.1 Category Theory for the Perplexed . . . . .	272
C.2 Basic Definitions . . . . .	272
C.3 Products, Coproducts, and Duality . . . . .	277
C.4 Functors . . . . .	281
C.5 Natural Transformations . . . . .	285
C.6 Properties of the Product Functor . . . . .	287
C.7 Representation of Categories . . . . .	293
C.8 Cartesian Closed Categories . . . . .	296
C.9 Symmetric Monoidal Closed Categories . . . . .	300
<b>Symbols</b>	<b>303</b>
<b>Bibliography</b>	<b>307</b>
<b>Index</b>	<b>321</b>
