## *Preface*

vii

<b>1</b>	<b>Introduction</b>	1
<b>2</b>	<b>Likelihood analysis for spatial Gaussian processes</b>	9
2.1	Spatial autoregressions	11
2.2	Range parameters	15
2.3	Discussion	19
<b>3</b>	<b>Edge corrections for spatial point processes</b>	22
3.1	Edge corrections for nearest neighbour methods	24
3.2	Interpoint distance methods	28
3.3	Asymptotic variances for edge-corrected estimates	35
3.4	Limit theorems for interpoint distances	44
<b>4</b>	<b>Parameter estimation for Gibbsian point processes</b>	49
4.1	Definitions	49
4.2	Local conditioning methods	52
4.3	Approximate maximum likelihood	55
4.4	Monte-Carlo approximations	62
4.5	Discussion	65
4.6	An example	67
<b>5</b>	<b>Modelling spatial images</b>	74
5.1	A general Bayesian approach	76
5.2	Markov random field models	79
5.3	Applications in astronomy	82
5.4	Application to segmentation	95
5.5	Other statistical approaches to segmentation	113

<b>6</b>	<b>Summarizing binary images</b>	121
6.1	Mathematical formulation	123
6.2	A proposed summary	128
6.3	Computation	130
6.4	Examples	131
6.5	Extensions	135
