How to use this book	page	viii	2.22 Incremental deformation	42
Preface		xi	2.23 Strain compatibility and boundary conditions	42
Acknowledgments		xii	2.24 Deformation history from deformed rocks	43
List of symbols		xiii	2.25 Coaxiality and progressive simple shear	44
1			2.26 Progressive pure shear	46
.....			2.27 Progressive subsimple shear	47
Structural geology and structural analysis		1	2.28 Simple and pure shear and their scale dependence	48
1.1 Approaching structural geology		2	2.29 General three-dimensional deformation	49
1.2 Structural geology and tectonics		2	2.30 Stress versus strain	50
1.3 Structural data sets		4	Summary	52
1.4 Field data		5	3	
1.5 Remote sensing and geodesy		5	
1.6 DEM, GIS and Google Earth		6	Strain in rocks	55
1.7 Seismic data		8	3.1 Why perform strain analysis?	56
1.8 Experimental data		10	3.2 Strain in one dimension	56
1.9 Numerical modeling		12	3.3 Strain in two dimensions	56
1.10 Other data sources		12	3.4 Strain in three dimensions	61
1.11 Organizing the data		12	Summary	65
1.12 Structural analysis		15	4	
1.13 Concluding remarks		18	
2			Stress	69
.....			4.1 Definitions, magnitudes and units	70
Deformation		21	4.2 Stress on a surface	70
2.1 What is deformation?		22	4.3 Stress at a point	71
2.2 Components of deformation		23	4.4 Stress components	72
2.3 System of reference		24	4.5 The stress tensor (matrix)	73
2.4 Deformation: detached from history		25	4.6 Deviatoric stress and mean stress	74
2.5 Homogeneous and heterogeneous deformation		25	4.7 Mohr circle and diagram	75
2.6 Mathematical description of deformation		26	Summary	76
2.7 One-dimensional strain		28	5	
2.8 Strain in two dimensions		28	
2.9 Three-dimensional strain		30	Stress in the lithosphere	79
2.10 The strain ellipsoid		30	5.1 Importance of stress measurements	80
2.11 More about the strain ellipsoid		31	5.2 Stress measurements	80
2.12 Volume change		32	5.3 Reference states of stress	83
2.13 Uniaxial strain (compaction)		33	5.4 The thermal effect on horizontal stress	86
2.14 Pure shear and coaxial deformations		35	5.5 Residual stress	88
2.15 Simple shear		35	5.6 Tectonic stress	88
2.16 Subsimpl shear		36	5.7 Global stress patterns	90
2.17 Progressive deformation and flow parameters		36	5.8 Differential stress, deviatoric stress and some implications	93
2.18 Velocity field		38	Summary	94
2.19 Flow apophyses		39		
2.20 Vorticity and W_k		40		
2.21 Steady-state deformation		41		

6		10	
Rheology	97	Deformation at the microscale	203
6.1 Rheology and continuum mechanics	98	10.1 Deformation mechanisms and microstructures	204
6.2 Idealized conditions	99	10.2 Brittle versus plastic deformation mechanisms	204
6.3 Elastic materials	99	10.3 Brittle deformation mechanisms	205
6.4 Plasticity and flow: permanent deformation	103	10.4 Mechanical twinning	205
6.5 Combined models	107	10.5 Crystal defects	207
6.6 Experiments	109	10.6 From the atomic scale to microstructures	213
6.7 The role of temperature, water etc.	110	Summary	216
6.8 Definition of plastic, ductile and brittle deformation	112		
6.9 Rheology of the lithosphere	113	11	
Summary	115	Folds and folding	219
7		11.1 Geometric description	220
Fracture and brittle deformation	119	11.2 Folding: mechanisms and processes	226
7.1 Brittle deformation mechanisms	120	11.3 Fold interference patterns and refolded folds	235
7.2 Types of fractures	121	11.4 Folds in shear zones	237
7.3 Failure and fracture criteria	126	11.5 Folding at shallow crustal depths	238
7.4 Microdefects and failure	130	Summary	239
7.5 Fracture termination and interaction	136		
7.6 Reactivation and frictional sliding	138	12	
7.7 Fluid pressure, effective stress and poroelasticity	139	Foliation and cleavage	243
7.8 Deformation bands and fractures in porous rocks	141	12.1 Basic concepts	244
Summary	148	12.2 Relative age terminology	245
		12.3 Cleavage development	246
		12.4 Cleavage, folds and strain	250
		12.5 Foliations in quartzites, gneisses and mylonite zones	254
		Summary	256
8			
Faults	151	13	
8.1 Fault terminology	152	Lineations	259
8.2 Fault anatomy	156	13.1 Basic terminology	260
8.3 Displacement distribution	160	13.2 Lineations related to plastic deformation	260
8.4 Identifying faults in an oil field setting	161	13.3 Lineations in the brittle regime	263
8.5 The birth and growth of faults	165	13.4 Lineations and kinematics	265
8.6 Growth of fault populations	174	Summary	268
8.7 Faults, communication and sealing properties	181		
Summary	185	14	
		Boudinage	271
9		14.1 Boudinage and pinch-and-swell structures	272
Kinematics and paleostress in the brittle regime	189	14.2 Geometry, viscosity and strain	272
9.1 Kinematic criteria	190	14.3 Asymmetric boudinage and rotation	275
9.2 Stress from faults	192	14.4 Foliation boudinage	277
9.3 A kinematic approach to fault slip data	196	14.5 Boudinage and the strain ellipse	278
9.4 Contractional and extensional structures	197	14.6 Large-scale boudinage	279
Summary	200	Summary	281

15			
Shear zones and mylonites	285		
15.1 What is a shear zone?	286		
15.2 The ideal plastic shear zone	289		
15.3 Adding pure shear to a simple shear zone	294		
15.4 Non-plane strain shear zones	296		
15.5 Mylonites and kinematic indicators	297		
15.6 Growth of shear zones	306		
Summary	307		
16			
Contractional regimes	311		
16.1 Contractional faults	312		
16.2 Thrust faults	313		
16.3 Ramps, thrusts and folds	319		
16.4 Orogenic wedges	323		
Summary	329		
17			
Extensional regimes	333		
17.1 Extensional faults	334		
17.2 Fault systems	335		
17.3 Low-angle faults and core complexes	338		
17.4 Ramp-flat-ramp geometries	341		
17.5 Footwall versus hanging-wall collapse	342		
17.6 Rifting	342		
17.7 Half-grabens and accommodation zones	343		
17.8 Pure and simple shear models	344		
17.9 Stretching estimates, fractals and power law relations	345		
17.10 Passive margins and oceanic rifts	347		
17.11 Orogenic extension and orogenic collapse	348		
17.12 Postorogenic extension	350		
Summary	351		
18			
Strike-slip, transpression and transtension	355		
18.1 Strike-slip faults	356		
18.2 Transfer faults	356		
18.3 Transcurrent faults	358		
18.4 Development and anatomy of strike-slip faults	359		
		18.5 Transpression and transtension	363
		18.6 Strain partitioning	366
		Summary	368
		19	
		Salt tectonics	371
		19.1 Salt tectonics and halokinesis	372
		19.2 Salt properties and rheology	373
		19.3 Salt diapirism, salt geometry and the flow of salt	374
		19.4 Rising diapirs: processes	383
		19.5 Salt diapirism in the extensional regime	383
		19.6 Diapirism in the contractional regime	386
		19.7 Diapirism in strike-slip settings	389
		19.8 Salt collapse by karstification	389
		19.9 Salt décollements	390
		Summary	392
		20	
		Balancing and restoration	395
		20.1 Basic concepts and definitions	396
		20.2 Restoration of geologic sections	396
		20.3 Restoration in map view	403
		20.4 Restoration in three dimensions	404
		20.5 Backstripping	404
		Summary	406
		21	
		A glimpse of a larger picture	409
		21.1 Synthesizing	410
		21.2 Deformation phases	410
		21.3 Progressive deformation	411
		21.4 Metamorphic textures	411
		21.5 Radiometric dating and P - T - t paths	414
		21.6 Tectonics and sedimentation	415
		Summary	417
		Appendix A: More about the deformation matrix	418
		Appendix B: Stereographic projection	422
		Glossary	428
		References	451
		Cover and chapter image captions	455
		Index	457
