CONTENTS

| | |
|--|------|
| Preface to the first edition | v |
| Preface to the second edition | viii |
| CHAPTER I. Algebra of sets | |
| § 1. Propositional calculus | 1 |
| § 2. Sets and operations on sets | 4 |
| § 3. Inclusion. Empty set | 7 |
| § 4. Laws of union, intersection, and subtraction | 10 |
| § 5. Properties of symmetric difference | 13 |
| § 6. The set 1, complement | 18 |
| § 7. Constituents | 21 |
| § 8. Applications of the algebra of sets to topology | 27 |
| § 9. Boolean algebras | 33 |
| § 10. Lattices | 42 |
| CHAPTER II. Axioms of set theory. Relations. Functions | |
| § 1. Set theoretical formulas. Quantifiers | 46 |
| § 2. Axioms of set theory | 52 |
| § 3. Some simple consequences of the axioms | 58 |
| § 4. Cartesian products. Relations | 62 |
| § 5. Equivalence relations. Partitions | 66 |
| § 6. Functions | 69 |
| § 7. Images and inverse images | 74 |
| § 8. Functions consistent with a given equivalence relation. Factor Boolean algebras | 78 |
| § 9. Order relations | 80 |
| § 10. Relational systems, their isomorphisms and types | 85 |
| CHAPTER III. Natural numbers. Finite and infinite sets | |
| § 1. Natural numbers | 89 |
| § 2. Definitions by induction | 93 |
| § 3. The mapping J of the set $N \times N$ onto N and related mappings | 98 |
| § 4. Finite and infinite sets | 102 |

CHAPTER IV. Generalized union, intersection and Cartesian product

| | |
|---|-----|
| § 1. Set-valued functions. Generalized union and intersection | 107 |
| § 2. Operations on infinite sequences of sets | 117 |
| § 3. Families of sets closed under given operations | 121 |
| § 4. σ -additive and δ -multiplicative families of sets | 124 |
| § 5. Reduction and separation properties | 127 |
| § 6. Generalized cartesian products | 129 |
| § 7. Cartesian products of topological spaces | 133 |
| § 8. The Tychonoff theorem | 137 |
| § 9. Reduced direct products | 140 |
| § 10. Infinite operations in lattices and in Boolean algebras | 145 |
| § 11. Extensions of ordered sets to complete lattices | 152 |
| § 12. Representation theory for distributive lattices | 158 |

CHAPTER V. Theory of cardinal numbers

| | |
|---|-----|
| § 1. Equipollence. Cardinal numbers | 164 |
| § 2. Countable sets | 169 |
| § 3. The hierarchy of cardinal numbers | 174 |
| § 4. The arithmetic of cardinal numbers | 178 |
| § 5. Inequalities between cardinal numbers. The Cantor-Bernstein theorem and its generalizations | 181 |
| § 6. Properties of the cardinals \aleph and \mathfrak{c} | 188 |
| § 7. The generalized sum of cardinal numbers | 191 |
| § 8. The generalized product of cardinal numbers | 195 |

CHAPTER VI. Linearly ordered sets

| | |
|--|-----|
| § 1. Introduction | 201 |
| § 2. Dense, scattered, and continuous sets | 205 |
| § 3. Order types ω , η , and λ | 210 |
| § 4. Arithmetic of order types | 217 |
| § 5. Lexicographical ordering | 220 |

CHAPTER VII. Well-ordered sets

| | |
|---|-----|
| § 1. Definitions. Principle of transfinite induction | 224 |
| § 2. Ordinal numbers | 228 |
| § 3. Transfinite sequences | 230 |
| § 4. Definitions by transfinite induction | 233 |
| § 5. Ordinal arithmetic | 239 |
| § 6. Ordinal exponentiation | 245 |
| § 7. Expansions of ordinal numbers for an arbitrary base | 248 |
| § 8. The well-ordering theorem | 254 |
| § 9. Von Neumann's method of elimination of ordinal numbers | 262 |

CHAPTER VIII. Alephs and related topics

| | |
|--|-----|
| § 1. Ordinal numbers of power α | 267 |
| § 2. The cardinal $\aleph(m)$, Hartogs' aleph | 270 |
| § 3. Initial ordinals | 272 |
| § 4. Alephs and their arithmetic | 275 |
| § 5. The exponentiation of alephs | 280 |
| § 6. The exponential hierarchy of cardinal numbers | 284 |
| § 7. The continuum hypothesis | 290 |
| § 8. The number of prime ideals in the algebra $P(A)$ | 296 |
| § 9. m -disjoint sets | 300 |
| § 10. Families of disjoint open sets | 302 |
| § 11. Equivalence of certain statements about cardinal numbers with the axiom of choice | 308 |

CHAPTER IX. Trees and partitions

| | |
|--|-----|
| § 1. Trees | 315 |
| § 2. The lexicographical ordering of zero-one sequences. η_ξ sets | 319 |
| § 3. König's infinity lemma | 326 |
| § 4. Aronszajn's trees | 329 |
| § 5. Souslin trees | 332 |
| § 6. Some partition theorems | 336 |

CHAPTER X. Inaccessible cardinals

| | |
|---|-----|
| § 1. Normal functions and stationary sets | 342 |
| § 2. Weakly and strongly inaccessible cardinals | 348 |
| § 3. A digression on models of Σ^0 [TR] | 352 |
| § 4. Higher types of inaccessible numbers | 356 |
| § 5. Weakly compact cardinals | 360 |
| § 6. Measurable cardinals | 366 |
| § 7. Measurable cardinals and reduced products | 375 |

Introduction to descriptive set theory

CHAPTER XI. Auxiliary notions

| | |
|--|-----|
| § 1. The notion of a metric space. Various fundamental topological notions | 386 |
| § 2. Exponential topology. Compact-open topology | 392 |
| § 3. Complete and Polish spaces | 396 |
| § 4. L -measurable mappings | 400 |
| § 5. The operation \mathcal{A} | 409 |
| § 6. The Lusin sieve | 412 |

CHAPTER XII. Borel sets. B -measurable functions. Baire property

| | |
|---|-----|
| § 1. Elementary properties of Borel subsets of a metric space | 415 |
|---|-----|

| | |
|--|-----|
| § 2. Ambiguous Borel sets | 417 |
| § 3. Borel-measurable functions | 419 |
| § 4. B -measurable complex and product functions | 421 |
| § 5. Universal functions for Borel classes | 423 |
| § 6. Borel subsets of Polish spaces | 426 |
| § 7. Further properties of Borel sets | 427 |
| § 8. Baire property | 428 |
| CHAPTER XIII. Souslin spaces. Projective sets | |
| § 1. Souslin spaces. Fundamental properties | 434 |
| § 2. Applications of countable order types to Souslin spaces | 444 |
| § 3. Coanalytic sets (CA -sets) | 447 |
| *§ 4. The σ -algebra \bar{S} generated by Souslin sets and the \bar{S} -measurable mappings | 451 |
| § 5. The PCA -sets and sets of higher projective classes | 455 |
| CHAPTER XIV. Measurable selectors | |
| § 1. The general selector theorem | 458 |
| § 2. Selectors for measurable partitions of Polish spaces | 463 |
| § 3. Selectors for point-inverses of continuous mappings. | 466 |
| Bibliography | 476 |
| List of important symbols | 496 |
| Subject index | 502 |
