Table of Contents

Part I. Preliminary Survey

Chapter 1. The Woodward-Hoffmann Rules in Perspective . . .	3
1.1 Prolegomenon	3
1.2 The Suprafacial-Antarafacial Dichotomy	5
1.2.1 Ground-State Reactions	5
1.2.2 Excited State Reactions	9
1.3 Frontier Electrons and Frontier Orbitals	10
1.3.1 HOMO-LUMO Interaction	11
1.3.2 Superjacent and Subjacent Orbitals	14
1.4 Orbital and Configuration Correlation	15
1.4.1 Frontier Electron Energy	17
1.4.2 Correlation of Electron Configurations	17
1.4.2.1 [4+2]-Cycloaddition and Cycloreversion	18
1.4.2.2 [2+2]-Cycloaddition and Cycloreversion	19
1.5 Problems and Prospects	21
1.5.1 Some Unanswered Questions	21
1.5.2 Where Do We Go From Here?	23
1.6 References	24

Part II. Symmetry and Energy

Chapter 2. Atoms and Atomic Orbitals	29
2.1 Is an Isolated Atom Spherically Symmetrical?	29
2.2 Desymmetrization by an External Field	31
2.2.1 <i>p</i> Orbitals in a Magnetic Field	31
2.2.2 <i>p</i> Orbitals in a Quadrupolar Field	33
2.2.3 Digression: Some Elementary Group Theory	36
2.2.4 The Phase of an Orbital	37
2.2.5 Digression: A Bit More Group Theory	37
2.2.6 Hybridization	41
2.2.7 The Formal Expression of Desymmetrization	43
2.2.7.1 I. Desymmetrization to a Subgroup	43
2.2.7.2 II. Desymmetrization by a Perturbation	44

2.3	Something About <i>d</i> Orbitals	46
2.3.1	Splitting <i>d</i> Orbitals by an External Field	46
2.3.2	A Further Excursion into Group Theory	48
2.3.2.1	Classes and Degenerate Representations	49
2.3.2.2	Invariant Subgroups, Kernels and Co-Kernels	51
2.4	References	54
Chapter 3. Diatomic Molecules and Their Molecular Orbitals		57
3.1	The Hydrogen Molecule Ion	57
3.1.1	The Symmetry of H_2^+	57
3.1.2	The Molecular Orbitals of H_2^+	59
3.2	Homonuclear Diatomic Molecules	62
3.2.1	Mulliken's Orbital Correlation Diagram	63
3.2.2	The Symmetry of Electron Configurations	65
3.2.3	State Symmetry in $D_{\infty h}$ and D_{2h}	66
3.3	Heteronuclear Diatomic Molecules	70
3.3.1	The Non-Crossing Rule	72
3.3.2	Configuration and State Correlation	74
3.4	Symmetry Coordinates	74
3.4.1	Homonuclear Diatomics	74
3.4.2	Heteronuclear Diatomics	76
3.5	References	76
Chapter 4. Formation and Deformation of Polyatomic Molecules		77
4.1	Triatomic Molecules	77
4.1.1	Molecular Orbitals and Walsh Diagrams	78
4.1.2	Symmetry Coordinates of a Symmetric Triatomic Linear Molecule	80
4.1.3	Symmetry Coordinates of a Symmetric Non-Linear Triatomic	82
4.2	Linear Tetraatomics and Their Deformation	83
4.3	Dimerization of Methylene and Its Reversal	88
4.3.1	The Dimerization of Methylene	88
4.3.1.1	I. Desymmetrization to a Subgroup	90
4.3.1.2	II. Desymmetrization by a Perturbation	90
4.3.1.3	WH-LHA and OCAMS: A Comparison	91
4.3.2	The Fragmentation of Ethylene	93
4.3.2.1	Bader's Analysis of Molecular Fragmentation	93
4.4	Symmetry Coordinates and Normal Modes	95
4.4.1	Non-Degenerate Vibrations	95
4.4.2	Degenerate Vibrations	96
4.4.3	Reducing Reducible Representations	98
4.4.3.1	The CH-Stretching Coordinates of Ethylene	99
4.4.3.2	The NiF-Stretching Coordinates of NiF_4^-	100

4.5 Motion Along the Reaction Coordinate	102
4.5.1 Distortional and Substitutional Desymmetrization Compared	103
4.5.2 At The Transition State	103
4.6 References	104

Part III. The Classical Thermal Reactions

Chapter 5. Electrocyclic Reactions and Related

Rearrangements	109
5.1 Rudimentary Analysis of Polyene Cyclization	109
5.1.1 Cyclization of Butadiene to Cyclobutene	110
5.1.2 <i>cis</i> -1,3,5-Hexatriene to 1,3-Cyclohexadiene	111
5.2 More Subtle Considerations	113
5.2.1 Correlation <i>vs.</i> Correspondence	113
5.2.2 The Rôle of σ -Orbitals	114
5.2.3 Substitutional Desymmetrization: Norcaradiene	116
5.2.4 Local <i>vs.</i> Global Symmetry:	116
5.2.4.1 Bisorcaradiene	116
5.2.4.2 Cyclooctatetraene \leftrightarrow Bicyclooctatriene	118
5.3 "Allowedness" and "Forbiddenness"	119
5.3.1 Rearrangement of <i>s-cis</i> -Butadiene to Bicyclobutane	119
5.3.2 The Bond-Bisection Requirement: Benzvalene	122
5.3.3 Genuinely <i>Forbidden</i> Valence Isomerizations	125
5.3.4 Quantifying "Allowedness": Cubane \leftrightarrow Cyclooctatetraene	127
5.3.4.1 Analysis in Global Symmetry	128
5.3.4.2 Analysis in Local Symmetry	129
5.3.5 The Bottom Line So Far	131
5.4 References	132

Chapter 6. Cycloadditions and Cycloreversions:

I. [2+2]-Cycloaddition	135
6.1 Addition of Singlet Carbenes to Ethylene	135
6.1.1 The Direct Approach	136
6.1.2 Correcting a Geometrically Unreasonable Approach	137
6.1.2.1 Composite Motions	138
6.2 Concerted [$\pi 2 + \pi 2$]-Cycloaddition	139
6.2.1 The [$\pi 2_s + \pi 2_s$] Approach	139
6.2.1.1 Substitutional Desymmetrization: Dimerization of Silaethylene	141
6.2.2 [$\pi 2_s + \pi 2_a$]-Cycloaddition	142
6.3 Cycloaddition via a Tetramethylene Intermediate	143
6.3.1 The Biradical Mechanism	143
6.3.1.1 Stereochemistry of Biradical Cycloaddition	145
6.3.2 The Zwitterionic Mechanism	147

6.4 Ketene Cycloadditions	149
6.4.1 Diversion: Secondary Isotope Effects	150
6.4.2 Reconciling the Evidence	153
6.4.2.1 Product Stereochemistry	153
6.4.2.2 Substituent, Solvent and Isotope Effects	155
6.5 Apologia	157
6.6 References	157

Chapter 7. Cycloadditions and Cycloreversions:

II. Beyond [2+2]	161
7.1 [$\pi_4 + \pi_2$]-Cycloaddition; Anasymmetrization	161
7.1.1 The Diels-Alder Reaction	161
7.1.1.1 Anasymmetrization	162
7.1.1.2 Changing the Initial Orientation	166
7.2 Reactions Related to [$\pi_4 + \pi_2$]-Cycloaddition	167
7.2.1 The Homo-Diels-Alder Reaction	167
7.2.2 $n > 4$ and/or $m > 2$	168
7.2.3 1,3-Dipolar Cycloaddition	168
7.3 More Complex [$\pi_2 + \pi_2$]-Cycloadditions	171
7.3.1 Dimerization of Cyclobutadiene	171
7.3.1.1 The (Non)-Dimerization of CBD to Cubane	172
7.3.1.2 Dimerization of Cyclobutadiene to Tricyclooctatriene	175
7.3.2 [2 + 2]-Cycloreversion of <i>o,o'</i> -Benzene-dimer	178
7.3.2.1 Digression on Entropy of Activation	178
7.3.3 Dimerization of Cyclomonoalkenes	181
7.3.3.1 Cyclopropene	182
7.3.3.2 Dimerization of Silacyclopropenes	183
7.4 References	185

Chapter 8. Degenerate Rearrangements 187

8.1 Correspondence Between Reactant and/or Product and Transition Structure	188
8.1.1 1,2-Rearrangement of Tetraaryldisilenes	188
8.1.2 Digression: Degenerate X^- Ion Substitution in CH_3X	190
8.2 The Cope Rearrangement	192
8.2.1 Symmetry Analysis of the Cope Rearrangement	193
8.2.2 Rearrangement of Bridged Hexadienes	196
8.3 [1, <i>j</i>]-Sigmatropic Rearrangements	197
8.3.1 [1, <i>j</i>]-Hydrogen Shifts in Non-Cyclic Molecules	197
8.3.1.1 [1,3]-Sigmatropic Rearrangement of Propylene	198
8.3.1.2 [1,5]-Hydrogen Shift in <i>s-cis</i> -Pentadiene	200
8.3.1.3 A Word About [1,7]-Hydrogen Shifts	202
8.3.2 Circumambulatory Rearrangements	202
8.3.2.1 [1,5]-Hydrogen Shift in Cyclopentadiene	203
8.3.2.2 The "Norcaradiene Walk" Rearrangement	204

8.4 Fluxional Isomerization of Cyclobutadiene	207
8.4.1 Correspondence Between Reactant and Product	207
8.4.2 Correspondence Between Anasymmetrized Reactant and Transition Structure	209
8.5 References	210

Part IV. Spin and Photochemistry

Chapter 9. Electron Spin	215
9.1 Spin and Symmetry	215
9.1.1 The Symmetry of Spinning Electrons	216
9.1.1.1 A Single Spinning Electron	216
9.1.1.2 Two Spinning Electrons	216
9.1.2 Space-, Spin- and Overall Symmetry	218
9.1.2.1 Example 1: Rectangular Cyclobutadiene (D_{2h})	218
9.1.2.2 Example 2: Square-Planar Cyclobutadiene (D_{4h})	219
9.1.2.3 Overall Symmetry	220
9.1.2.4 Geminals	221
9.2 Intersystem Crossing	221
9.2.1 Intersystem Crossing of Carbenes	223
9.2.1.1 Spin-Orbit Coupling	224
9.2.1.2 Spin-Vibronic Coupling	224
9.3 Reactive Intersystem Crossing	226
9.3.1 The Arrhenius Parameters of Spin-Non-Conservative Reactions	227
9.3.2 Thermolysis of Diazomethane	228
9.3.3 Thermolysis of Methylene-pyrazoline	230
9.3.3.1 The Zwitterion Cascade Mechanism	233
9.3.3.2 Secondary Isotope Effects	233
9.3.4 "Photochemistry Without Light"	236
9.3.4.1 Isomerization of Dewar Benzene to Triplet Benzene	236
9.3.4.2 Fragmentation of 1,2-Dioxetanes	237
9.4 References	240
Chapter 10. Excited State Reactions	243
10.1 The Basic Photophysical Processes	243
10.1.1 Fluorescence: The Azulene Anomaly	245
10.1.2 Stereoselectivity of Photophysical Processes: Bimanes	246
10.1.3 Chemical Sensitization: Singlet Dioxygen	248
10.2 Photofragmentation	250
10.2.1 Photolysis of Cyclobutadiene	250
10.2.2 Photochemical Decomposition of Formaldehyde	251
10.2.2.1 Pathway I: $S_1(H_2CO) \rightarrow S_0(H_2CO) \rightarrow H_2 + CO$	252
10.2.2.2 Pathway II: $S_1(H_2CO) \rightarrow H + HCO$	253
10.2.2.3 Sidelight: Coping with the Limitations	254

10.3 Photoisomerization of Benzene	255
10.3.1 Photoisomerization to Benzvalene	257
10.3.2 Photoisomerization to Dewar Benzene	258
10.4 Spin-Non-Conservative Photoisomerization: Naphthalene	258
10.5 Rydberg Photochemistry: Photolysis of Methane	261
10.6 References	264
Chapter 11. Into Inorganic Chemistry	267
11.1 Main-Group Elements	267
11.1.1 Ground-State Isomerization: "Berry Pseudorotation"	269
11.1.2 The Allotropy of Phosphorus	270
11.1.3 An Excited-State Reaction: Photoextrusion of Silylene	273
11.2 Transition Metals: Isomerization of $NiX_4^=$	275
11.3 Afterword	278
11.4 References	278
Appendix	
A. Character Tables of the More Common Symmetry Point Groups	283
B. Kernels and Co-Kernels of Degenerate Irreducible Representations	296
C. Group Correlation Tables	298
Subject Index	301
