

Theory of Probability

A critical introductory treatment

Volume 1

BRUNO DE FINETTI

*Professor of the Theory of Probability
at the University of Rome*

Translated by

ANTONIO MACHÍ

*Assistant Professor of Mathematics
at the University of Rome*

and

ADRIAN SMITH

*Lecturer in Mathematics at the
University of Oxford, and
Fellow of Keble College, Oxford*

JOHN WILEY & SONS

Chichester · New York · Brisbane · Toronto

Contents

CHAPTER 1 INTRODUCTION 1

- 1.1 *Why a new book on probability?* 1
- 1.2 *What are the mathematical differences?* 2
- 1.3 *What are the conceptual differences?* 3
- 1.4 *Preliminary clarifications* 5
- 1.5 *Some implications to note* 7
- 1.6 *Implications for the mathematical formulation* 9
- 1.7 *An outline of the 'introductory treatment'* 11
- 1.8 *A few words about the 'critical' Appendix* 14
- 1.9 *Other remarks* 15
- 1.10 *Some remarks on terminology* 19
- 1.11 *The tyranny of language* 21
- 1.12 *References* 22

CHAPTER 2 CONCERNING CERTAINTY AND UNCERTAINTY 24

- 2.1 *Certainty and uncertainty* 24
- 2.2 *Concerning probability* 26
- 2.3 *The range of possibility* 27
- 2.4 *Critical observations concerning the 'space of alternatives'* 32
- 2.5 *Logical and arithmetic operations* 35
- 2.6 *Assertion, implication; incompatibility* 39
- 2.7 *Partitions; constituents; logical dependence and independence* 42
- 2.8 *Representations in linear form* 48
- 2.9 *Means; associative means* 56
- 2.10 *Examples and clarifications* 59
- 2.11 *Concerning certain conventions of notation* 66

CHAPTER 3 PREVISION AND PROBABILITY 69

- 3.1 *From uncertainty to prevision* 69
- 3.2 *Digressions on decisions and utilities* 76

3.3	<i>Basic definitions and criteria</i>	83
3.4	<i>A geometric interpretation: the set \mathcal{P} of coherent previsions</i>	89
3.5	<i>Extensions of notation</i>	91
3.6	<i>Remarks and examples</i>	92
3.7	<i>Prevision in the case of linear and non-linear dependence</i>	94
3.8	<i>Probabilities of events</i>	99
3.9	<i>Linear dependence in general</i>	105
3.10	<i>The fundamental theorem of probability</i>	111
3.11	<i>Zero probabilities; critical questions</i>	116
3.12	<i>Random quantities with an infinite number of possible values</i>	128
3.13	<i>The continuity property</i>	132

CHAPTER 4 CONDITIONAL PREVISION AND PROBABILITY 134

4.1	<i>Prevision and the state of information</i>	134
4.2	<i>Definition of conditional prevision (and probability)</i>	135
4.3	<i>Proof of the theorem of compound probabilities</i>	136
4.4	<i>Remarks</i>	139
4.5	<i>Probability and prevision conditional on a given event H</i>	140
4.6	<i>Likelihood</i>	142
4.7	<i>Probability conditional on a partition \mathcal{H}</i>	143
4.8	<i>Comments</i>	144
4.9	<i>Stochastic dependence and independence; correlation</i>	146
4.10	<i>Stochastic independence among (finite) partitions</i>	149
4.11	<i>On the meaning of stochastic independence</i>	150
4.12	<i>Stochastic dependence in the direct sense</i>	152
4.13	<i>Stochastic dependence in the indirect sense</i>	153
4.14	<i>Stochastic dependence through an increase in information</i>	154
4.15	<i>Conditional stochastic independence</i>	156
4.16	<i>Non-correlation; correlation (positive or negative)</i>	161
4.17	<i>A geometric interpretation</i>	166
4.18	<i>On the comparability of zero probabilities</i>	173
4.19	<i>On the validity of the conglomerative property</i>	177

CHAPTER 5 THE EVALUATION OF PROBABILITIES 179

5.1	<i>How should probabilities be evaluated?</i>	179
5.2	<i>Bets and odds</i>	179
5.3	<i>How to think about things</i>	183
5.4	<i>The approach through losses</i>	185
5.5	<i>Applications of the loss approach</i>	191
5.6	<i>Subsidiary criteria for evaluating probabilities</i>	198
5.7	<i>Partitions into equally probable events</i>	199

- 5.8 *The prevision of a frequency* 202
- 5.9 *Frequency and 'wisdom after the event'* 207
- 5.10 *Some warnings* 211
- 5.11 *Determinism, indeterminism, and other 'isms'* 216

CHAPTER 6 DISTRIBUTIONS 221

- 6.1 *Introductory remarks* 221
- 6.2 *What we mean by a 'distribution'* 222
- 6.3 *The parting of the ways* 228
- 6.4 *Distributions in probability theory* 232
- 6.5 *An equivalent formulation* 241
- 6.6 *The practical study of distribution functions* 252
- 6.7 *Limits of distributions* 260
- 6.8 *Various notions of convergence for random quantities* 262
- 6.9 *Distributions in two (or more) dimensions* 269
- 6.10 *The method of characteristic functions* 280
- 6.11 *Some examples of characteristic functions* 287
- 6.12 *Some remarks concerning the divisibility of distributions* 296
