<i>Preface</i>	xv
<b>1 Symmetries and conservation laws</b>	<b>1</b>
1.1 Symmetries	1
1.2 Continuous parameters and local one-parameter groups	2
1.3 Classical mechanics: Lagrangian description	2
1.4 Conservation laws	3
1.5 Classical mechanics: Hamiltonian description	6
1.6 Quantum mechanics	8
1.7 Observation of symmetries	12
1.8 Gauge 'symmetries'	12
1.9 Duality symmetries	14
<b>2 Basic examples</b>	<b>17</b>
2.1 Angular momentum	17
2.2 Step operators	18
2.3 Irreducible representations	20
2.4 The free scalar field	22
2.5 The Heisenberg algebra	23
2.6 Common features	26
<b>3 The Lie algebra <math>\mathfrak{su}(3)</math> and hadron symmetries</b>	<b>30</b>
3.1 Symmetries of hadrons	30
3.2 Combining two $\mathfrak{sl}(2)$ -algebras	31
3.3 Multiple commutators	32
3.4 $\mathfrak{sl}(3)$ and $\mathfrak{su}(3)$	35
3.5 Orthogonal basis	36
3.6 The eightfold way	38
3.7 Quarks	40
3.8 Abstract Lie algebras	43

<b>4</b>	<b>Formalization: Algebras and Lie algebras</b>	47
4.1	Short summary	47
4.2	Groups, rings, fields	47
4.3	Vector spaces	48
4.4	Algebras	51
4.5	Lie algebras	51
4.6	Generators	52
4.7	Homomorphisms, isomorphisms, derivations	53
4.8	Subalgebras and ideals	54
4.9*	Solvable and nilpotent Lie algebras	57
4.10	Semisimple and abelian Lie algebras	57
4.11*	Gradations and Lie superalgebras	59
4.12*	Open and non-linear algebras	60
<b>5</b>	<b>Representations</b>	64
5.1	Representations and representation matrices	64
5.2	The adjoint representation	66
5.3	Constructing more representations	68
5.4	Schur's Lemma	71
5.5	Reducible modules	73
5.6	Matrix Lie algebras	74
5.7	The representation theory of $\mathfrak{sl}(2)$ revisited	77
<b>6</b>	<b>The Cartan–Weyl basis</b>	82
6.1	Cartan subalgebras	82
6.2	Roots	84
6.3	The Killing form	86
6.4	Some properties of roots and the root system	87
6.5	Structure constants of the Cartan–Weyl basis	89
6.6	Positive roots	90
6.7	Simple roots and the Cartan matrix	91
6.8	Root and weight lattices. The Dynkin basis	92
6.9	The metric on weight space	95
6.10	The Chevalley basis	96
6.11	Root strings	99
6.12	Examples	101
6.13*	Non-semisimple Lie algebras	102
<b>7</b>	<b>Simple and affine Lie algebras</b>	108
7.1	Chevalley–Serre relations	108
7.2	The Cartan matrix	110
7.3	Dynkin diagrams	112
7.4	Simple Lie algebras	113
7.5	Quadratic form matrices	116
7.6	The highest root and the Weyl vector	116

7.7	The orthonormal basis of weight space	119
7.8	Kac-Moody algebras	122
7.9	Affine Lie algebras	124
7.10	Coxeter labels and dual Coxeter labels	128
<b>8</b>	<b>Real Lie algebras and real forms</b>	133
8.1	More about the Killing form	133
8.2	The Killing form of real Lie algebras	135
8.3	The compact and the normal real form	136
8.4	The real forms of simple Lie algebras	139
<b>9</b>	<b>Lie groups</b>	144
9.1	Lie group manifolds	144
9.2	Global vector fields	145
9.3	Compactness	147
9.4	The exponential map	149
9.5*	Maurer-Cartan theory	151
9.6	Spin	151
9.7	The classical Lie groups	154
9.8	BCH formulæ	156
<b>10</b>	<b>Symmetries of the root system. The Weyl group</b>	161
10.1	The Weyl group	161
10.2	Fundamental reflections. Length and sign	164
10.3	Weyl chambers	167
10.4	The Weyl group in the orthogonal basis	168
10.5	The Weyl vector	171
10.6	The normalizer of the Cartan subalgebra	172
10.7	The Weyl group of affine Lie algebras	174
10.8*	Coxeter groups	177
<b>11</b>	<b>Automorphisms of Lie algebras</b>	181
11.1	The group of automorphisms	181
11.2	Automorphisms of finite order	181
11.3	Inner and outer automorphisms	183
11.4	An $\mathfrak{sl}(2)$ example	185
11.5	Dynkin diagram symmetries	186
11.6	Finite order inner automorphisms of simple Lie algebras	189
11.7	Automorphisms of the root system	191
11.8	Finite order outer automorphisms of simple Lie algebras	192
11.9	Involutive automorphisms, conjugations, real forms	193
11.10*	Involutive automorphisms and symmetric spaces	194

<b>12</b>	<b>Loop algebras and central extensions</b>	198
12.1	Central extensions	198
12.2*	Ray representations and cohomology	200
12.3	Loop algebras	202
12.4	Towards untwisted affine Lie algebras	203
12.5	The derivation	205
12.6	The Cartan-Weyl basis	207
12.7	The root system	209
12.8	Twisted affine Lie algebras	211
12.9*	The root system of twisted affine Lie algebras	212
12.10	Heisenberg algebras	214
12.11*	Gradations	215
12.12	The Virasoro algebra	216
<b>13</b>	<b>Highest weight representations</b>	221
13.1	Highest weight representations of $\mathfrak{sl}(2)$	221
13.2	Highest weight modules of simple Lie algebras	222
13.3	The weight system	225
13.4	Unitarity	228
13.5	Characters and dimensions	231
13.6	Defining modules and basic modules	234
13.7*	The dual Weyl vector	236
13.8	Highest weight modules of affine Lie algebras	237
13.9	Integrable highest weight modules	238
13.10*	Twisted affine Lie algebras	240
13.11	Triangular decomposition	241
<b>14</b>	<b>Verma modules, Casimirs, and the character formula</b>	244
14.1	Universal enveloping algebras	244
14.2	Quotients of algebras	245
14.3	The Poincaré-Birkhoff-Witt theorem	248
14.4	Verma modules and null vectors	249
14.5	The character of a Verma module	251
14.6	Null vectors and unitarity	253
14.7	The quadratic Casimir operator	254
14.8	Quadratic Casimir eigenvalues	256
14.9*	The second order Dynkin index	257
14.10	The character formula	258
14.11*	Characters and modular transformations	261
14.12*	Harish-Chandra theorem and higher Casimir operators	263
<b>15</b>	<b>Tensor products of representations</b>	266
15.1	Tensor products	266
15.2*	Tensor products for other algebraic structures	267
15.3	Highest weight modules	268
15.4	Tensor products for $\mathfrak{sl}(2)$	269

15.5	Conjugacy classes	271
15.6	Sum rules	273
15.7	The Racah–Speiser algorithm	273
15.8	Examples	276
15.9*	Kostant’s function and Steinberg’s formula	278
15.10*	Affine Lie algebras	278
<b>16</b>	<b>Clebsch–Gordan coefficients and tensor operators</b>	<b>281</b>
16.1	Isomorphisms involving tensor products of modules	281
16.2	Clebsch–Gordan coefficients and $3j$ -symbols	281
16.3	Calculation of Clebsch–Gordan coefficients	284
16.4	Formulæ for Clebsch–Gordan coefficients	286
16.5	Intertwiner spaces	287
16.6	Racah coefficients and $6j$ -symbols	288
16.7	The pentagon and hexagon identities	291
16.8	Tensor operators	294
16.9	The Wigner–Eckart theorem	296
<b>17</b>	<b>Invariant tensors</b>	<b>299</b>
17.1	Intertwiners and invariant tensors	299
17.2	Orthogonal and symplectic modules	301
17.3	Primitive invariants	302
17.4	Adjoint tensors of $\mathfrak{sl}(n)$	304
17.5	Tensors for spinor modules	306
17.6	Singlets in tensor products	308
17.7	Projection operators	309
17.8	Casimir operators	311
<b>18</b>	<b>Subalgebras and branching rules</b>	<b>315</b>
18.1	Subalgebras	315
18.2	The Dynkin index of an embedding	317
18.3	Finding regular subalgebras	318
18.4	$S$ -subalgebras	319
18.5	Projection maps and defining representations	321
18.6	Branching rules	323
18.7*	Embeddings of affine Lie algebras	326
<b>19</b>	<b>Young tableaux and the symmetric group</b>	<b>330</b>
19.1	Young tableaux	330
19.2	Dimensions and quadratic Casimir eigenvalues	333
19.3	Tensor products	335
19.4*	Young tableaux for other Lie algebras	337
19.5*	Brauer–Weyl theory	338

<b>20</b>	<b>Spinors, Clifford algebras, and supersymmetry</b>	<b>340</b>
20.1	Spinor representations	340
20.2	Clifford algebras	341
20.3	Representation theory of Clifford algebras	343
20.4	Representations of orthogonal algebras and groups	344
20.5*	SU(2) versus SO(3) revisited	346
20.6	Zoology of spinors	347
20.7	Spinors of the Lorentz group	350
20.8	The Poincaré algebra. Contractions	353
20.9	Supersymmetry	355
20.10*	Twistors	358
<b>21</b>	<b>Representations on function spaces</b>	<b>363</b>
21.1	Group actions on functions spaces	363
21.2	Multiplier representations and Lie derivatives	364
21.3	Multiplier representations of SL(2)	367
21.4	General function spaces	369
21.5	Spherical harmonics	370
21.6	Hypergeometric functions	372
21.7*	Classification of Lie derivatives	374
21.8	The Haar measure	375
21.9	The Peter–Weyl theorem	378
21.10	Group characters and class functions	380
21.11	Fourier analysis	382
<b>22</b>	<b>Hopf algebras and representation rings</b>	<b>386</b>
22.1	Co-products	386
22.2	Co-algebras and bi-algebras	388
22.3	Hopf algebras	389
22.4	Universal enveloping algebras	391
22.5	Quasi-triangular Hopf algebras	392
22.6	Deformed enveloping algebras	394
22.7	Group Hopf algebras	397
22.8	Functions on compact groups	398
22.9	Quantum groups	399
22.10	Quasi-Hopf algebras	400
22.11	Character rings	402
22.12	Rational fusion rings	405
22.13	The extended Racah–Speiser formalism	407
	<i>Epilogue</i>	412
	<i>References</i>	421
	<i>Index</i>	430
