TABLE OF CONTENTS

CHAPTER 0: PRELIMINARIES	1
CHAPTER I: DARBOUX FUNCTIONS	3
1. Examples of Darboux Functions	3
2. Remarks	4
3. Darboux functions and continuity	5
4. Operations, combinations, and approximations	5
5. Additional remarks	7
CHAPTER II: DARBOUX FUNCTIONS IN THE FIRST CLASS OF BAIRE	8
1. Equivalences	8
2. Examples	12
3. Operations, combinations and approximations	14
4. The class of derivatives: preliminary comparisons with $\mathcal{B}\mathcal{B}_1$	16
5. Approximate continuity	18
6. The Luzin-Menchoff theorem and constructions of approximately continuous functions	26
7. Maximoff's theorem	36
8. Integral comparisons of $\mathcal{C}, \mathcal{A}, \Delta$, and $\mathcal{B}\mathcal{B}_1$	37
9. Remarks	44
CHAPTER III: CONTINUITY AND APPROXIMATE CONTINUITY OF DERIVATIVES	45
1. Examples of discontinuous derivatives	45
2. Characterization of the set of discontinuities of a derivative	46
3. Approximate continuity of the derivative	48
4. A relationship between \mathcal{A} and Δ	50
CHAPTER IV: THE EXTREME DERIVATES OF A FUNCTION	52
1. Definitions and basic properties	52
2. Measurability and Baire classifications of extreme derivates	54
3. A Darboux-like property of Dini derivatives	58
4. Relationships among the derivates	62
CHAPTER V: RECONSTRUCTION OF THE PRIMITIVE	71
1. Reconstruction by Riemann or Lebesgue integration	71
2. Reconstruction of the primitive when its derivative is finite	72
3. Ambiguities when derivatives can be infinite	80
4. Generalized bounded variation and generalized absolute continuity	81

CHAPTER VI: THE ZAHORSKI CLASSES	85
1. Definitions and basic properties	85
2. Derivatives and the classes	87
3. Related conditions	94
CHAPTER VII: THE PROBLEM OF CHARACTERIZING DERIVATIVES	98
1. Associated sets	100
2. Perfect systems	100
3. An analogue to characterizing integrals	103
4. A characterization of Δ	103
5. Miscellaneous remarks	108
CHAPTER VIII: DERIVATIVES a.e. AND GENERALIZATIONS	111
1. Derivatives a.e.	111
2. A generalized derivative	115
3. Universal generalized antiderivatives	117
4. Differentiability a.e.	120
CHAPTER IX: TRANSFORMATIONS VIA HOMEOMORPHISMS	123
1. Differentiability via inner homeomorphisms	124
2. Differentiability via outer homeomorphism	132
3. Derivatives via inner homeomorphisms	135
4. Derivatives via outer homeomorphisms	139
5. Summary and miscellaneous remarks	144
CHAPTER X: GENERALIZED DERIVATIVES	147
1. The approximate derivative - Basic properties	147
2. Behavior of approximate derivatives	150
3. Miscellany	161
(a) Infinite approximate derivative	161
(b) Approximation	162
(c) Transformations	162
(d) Theories of integration	163
(e) Functions of several variables	164
4. Other generalized derivatives	165
(a) The preponderant derivative	165
(b) The qualitative derivative	166
(c) Császár's derivative	167
(d) Congruent derivatives	168
(e) The symmetric derivative	168
(f) Relative derivatives	169
(g) Selective derivatives	170
(h) Garg's derivative	171
(i) Higher order generalized derivatives	172

CHAPTER XI: MONOTONICITY	173
1. Some historical background for Section 2	174
2. A general theorem	176
3. Applications of Theorem 2.5	184
4. Monotonicity conditions in terms of extreme derivates	188
5. Monotonicity when $D^+F \in \mathcal{B}_1$	192
6. Convexity	193
CHAPTER XII: STATIONARY AND DETERMINING SETS	199
1. The stationary and determining sets for certain classes	200
2. Miscellaneous remarks	205
CHAPTER XIII: BEHAVIOR OF TYPICAL CONTINUOUS FUNCTIONS	209
1. Preliminaries and basic terminology	209
2. The differentiability structure of typical continuous functions	212
3. Horizontal level sets	214
4. Total level set structure	217
5. Miscellaneous comments	222
CHAPTER XIV: MISCELLANEOUS TOPICS	224
1. Restrictive differentiability properties of functions	224
2. Extensions to derivatives	226
3. The set of points of differentiability of a function	228
4. Derivatives, approximate continuity and summability	230
5. Additional topics	232
BIBLIOGRAPHY	234
NOTATIONAL INDEX	245
SUBJECT INDEX	247
